

SCHOOL OF AUTOMOTIVE AND MECHANICAL ENGINEERING

DEPARTMENT OF MECHANICAL ENGINEERING

BACHELOR OF TECHNOLOGY MECHANICAL ENGINEERING

CURRICULUM AND SYLLABUS

(For the Students Admitted from the Academic Year 2018-19 Onwards)

KALASALINGAM ACADEMY OF RESEARCH AND EDUCATION

VISION

To be a Centre of Excellence of International Repute in Education and Research.

MISSION

To Produce Technically Competent, Socially Committed Technocrats and Administrators through Quality Education and Research.

DEPARTMENT OF MECHANICAL ENGINEERING

VISION

To be Recognized Globally as a Lead in Mechanical Engineering through Excellence in Education and Innovative Research in Emerging areas

MISSION

To provide quality education and research with the state of the art facilities to the student. This is accomplished by:

- Enhancing the Knowledge and Expertise through Professional Programmes and Research Works.
- Endowing the Students with Academic Leadership, Communication Skills and Professional Awareness towards Social Commitment.

Program Educational Objectives

PEO-1- DIVERSIFIED KNOWLEDGE

Graduates will apply fundamental technical knowledge and skills to find workable solutions to technological challenges and problems in diversified areas such as Production, Design, Thermal, Industrial and allied fields of Mechanical Engineering.

PEO-2: CONTEMPORARY ISSUES & SKILLS

Graduates will have an effective communication skills and will recognize the social impacts of problem solving, decision making and creative skills by understanding contemporary issues.

PEO-3: PROFESSIONAL ATTITUDE

Graduates will gain professional and ethical attitude towards their peers, employers, society and prove as a responsible leader in the establishments in government and private sectors.

PEO-4: PROFESSIONAL DEVELOPEMENT

Graduates will become entrepreneurs to confront business challenges or will continue their professional advancement through their knowledge horizon and inculcate lifelong learning.

Student outcomes as described by ABET:

- 1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
- 2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
- 3. An ability to communicate effectively with a range of audiences.
- 4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
- 5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
- 6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
- 7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

Program Outcomes (POs):

PO1 - Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 - Problem analysis: Identify, formulate, research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 - Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4 - Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5 - Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO6 - The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7 - Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of need for sustainable development.

PO8 - Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9 - Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10 - Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11 - Project Management and Finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12 - Life-long learning: Recognise the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSO1- PO 13- An ability to utilize the gained knowledge of mathematics and engineering sciences to real time problems involving thermal, design, manufacturing and materials domain.

PSO2- PO 14- An ability to specify, fabricate, test, operate, validate and complete documentation of any basic mechanical systems or processes.

PSO3- PO 15- An ability to apply the acquired software's skills to design and analysis of advanced mechanical systems or processes.

Anand Nagar, Krishnankoil - 626126. Srivilliputtur (Via), Virudhunagar (Dt), Tamil Nadu | info@kalasalingam.ac.in | www.kalasalingam.ac.in

IX. SPECIAL ELECTIVES (HONOURS ELECTIVES)

X. INDUSTRIAL TRAINING / INTERNSHIP

MEC18R397 - Industry Training MEC18R398 - Internship

XI. MANDATORY COURSES

1. Environmental Sciences 2. Indian Constitution 3. Essence of Indian Traditional Knowledge

BASIC SCIENCES AND MATHEMATICS

PHY18R171 : INTRO	L	Τ	Р	С				
ELECTROMAGNET	IC THEORY	3	1	2	5			
Due neguicites Nil	Course Category: Basic Science and Mathematics							
Pre-requisite: INII	Course Type : Integrated	Course	•					

Course Objective(s):

To Understand the basic knowledge about the Electrostatics, Magnetostatics, Materials about magnetic and dielectric, Faraday laws and concepts, Maxwell's equation and Electromagnetic waves.

Course Outcome(s):

CO1	Describe the properties of static charges
CO2	Understand the basic concepts of magnetic field effects
CO3	Understand the fundamentals of magnetic properties of materials
CO4	Explore the basic idea about electromagnetic induction
CO5	Apply the knowledge on electromagnetism in solving real world problems

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3												3		
CO2	3												3		
CO3	3												3		
CO4	3												3		
CO5	3												3	2	1

Course Topics:

Unit-I: ELECTROSTATICS

The Electric Field- Continuous Charge Distributions-Divergence and Curl of electrostatic field: Field lines, Flux and Gauss's law, Divergence of E-Application of Gauss's law-The Curl of E-Electric Potential: Poisson's equation and Laplace equation, The potentials of a Localized Charge Distribution, Boundary Conditions-Work and Energy in electrostatics: Energy of a point charge distribution and energy of continuous charge distribution. Electric field and potential due to electric dipole

Unit-II: MAGNETOSTATICS

The Lorentz Force Law-Biot-Savart's Law- Applications of Biot-Savart's Law- Magnetic field due to current in a straight conductor-Magnetic field due to a circular current loop- Divergence and curl of static magnetic field - Ampere's Circuital law- Integral and differential form of Ampere's law- Applications of Ampere's law: Magnetic field due to solenoid and Magnetic field due to Toroid-Magnetic vector potential

Unit-III: MAGNETIC AND DIELECTRIC MATERIALS

Properties of magnetic materials, Diamagnetism, Paramagnetism and Ferromagnetism-Ferromagnetic Domains-Hysteresis curve- Comparison of Dia, Para, and Ferro magnetism. Dielectric constant – electronic, ionic, orientational and space charge polarization – frequency and temperature dependence of polarization – internal field – Claussius Mosotti equation – dielectric breakdown mechanisms.

Unit-IV: FARADAY'S LAW, DISPLACEMENT CURRENT AND MAXWELL'S EQUATIONS

Faraday's laws of electromagnetic induction-Lenz's law-Inductance- Electromotive force- motional EMF - Selfinductance of single coil-Mutual inductance of two coils-Energy stored in magnetic field - displacement current physical interpretation - Maxwell's equation in free space, Maxwell's equation in linear isotropic media.

Unit-V: ELECTROMAGNETIC WAVES

Poynting Theorem - Waves in one Dimension (Sinusoidal wave), Polarization-Electromagnetic waves in vacuum-Monochromatic plane waves-Energy and momentum in electromagnetic waves-Electromagnetic waves in matter. Application of electromagnetic waves: Reflection and Refraction at Dielectric interface (Normal Incidence only).

List of Experiments:

- 1. To compare capacitances using De'Sauty's bridge.
- 2. To determine the self-inductance of the coil using Anderson's bridge.
- 3. To determine the specific resistance of the material of two given wires using a meter bridge
- 4. To determine the internal resistance of a primary cell using a potentiometer
- 5. Measurement of field strength B and its variation in a Solenoid (Determine dB/dx).
- 6. To study the series LCR circuit and determine its (a) Resonant Frequency, (b)Quality Factor
- 7. To study the parallel LCR circuit and determine its (a) Anti-resonant frequency and(b) Quality factor Q
- 8. To determine the Low Resistance by Carey Foster's Bridge
- 9. Determination of Thermo emf- direct method BG
- 10. To determine the volume magnetic susceptibility of Manganese sulphate solution at different concentrations.
- 11. Determination of dielectric constant of liquids.
- 12. To determine the mutual inductance of the coil using Anderson's bridge.

Text Book(s):

- 1. J. David Griffiths, "Introduction to Electrodynamics", Edition: 4, Pearson India , 2015.
- 2. Sathya Prakash, "Electricity and Magnetism", Edition: 31, Pragati Prakashan India, 2016.

Reference(s):

CHV19D171 - CHEN	L	Τ	Р	С				
CHIIOKI/I: CHEW		3	1	2	5			
Due neguigites Nil	Course Category: Basic Science and Mathematics							
Pre-requisite: Mil	Course Type : Integrated	Course	e					

Course Objective(s):

Introducing the fundamental concepts and applications of Chemistry to the engineering students to understand, analyse and apply the same to complex technical issues

Course Outcome(s):

CO1	Demonstrate a knowledge on the significance and role of water quality parameters in the
001	domestic and engineering applications and analysing the same through modern methods
CO2	Explain the principles of thermodynamics for solving engineering problems
CO3	Explain the basic concepts of electrochemistry, batteries, corrosion and to apply the same
COS	for the betterment of society
CO4	Explain about synthesis, characteristics and applications of technologically important
04	polymers, composites and nanomaterials
CO5	Explain the underlying principles, instrumentation and applications of analytical techniques

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3												3		
CO2	3												3		
CO3	3												3		
CO4	3												3		
CO5	3												3		

Course Topics:

Unit-I: ATOMIC AND MOLECULAR STRUCTURE

Schrodinger wave equation: Derivation of time independent Schrodinger wave equation, Representation of Schrodinger wave equation in polar coordinates - Radial distribution function graphs of s, p, d and f orbitals. Molecular Orbital Theory: MOT concept, MO diagrams of homo-nuclear diatomic molecules (hydrogen, nitrogen and oxygen) and hetero-nuclear diatomic molecules (carbon monoxide and nitric oxide). Crystal field theory: CFT concept, weak and strong ligands, energy level diagrams of transition metal ions (Fe2+& Fe3+) in octahedral and tetrahedral complexes and their magnetic properties. Intermolecular forces - Ionic, dipolar and van der Waals interactions.

Unit-II: PERIODIC PROPERTIES

Effective nuclear charge - Factors affecting effective nuclear charge: Penetration or shielding of orbitals - Variation of s, p, d and f orbital energies of atoms in the periodic table - Aufbau principle (Building-up principle): Application of Aufbau principle in writing electronic configuration, Deviation from Aufbau principle - Periodicity of properties in a periodic table - Periodic properties: Atomic and ionic sizes, ionization energies, electron affinity and electronegativity - Variation of periodic properties in the periodic table - Hard soft acids and bases: Concept and examples

Unit-III: FREE ENERGY AND CHEMICAL EQUILIBRIA

Thermodynamic functions: Definition and mathematical expression for Work, Energy, Enthalpy, Entropy and Free energy - Nernst equation: Derivation, apply Nernst equation to determine of solubility product, pH (glass electrode). Potentiometric titrations: Acid-Base, Redox and precipitation reaction - Water analysis: Hardness by

EDTA method and chloride ion by Argentomentric method - Corrosion: Definition, types (dry & wet) and mechanism. and control of Dry and Wet corrosion.

Unit-IV: ORGANIC REACTIONS

Nucleophilic substitution reactions: Definition, types and examples of nucleophile, Compare nucleophilicity and basicity of a nuceophile - Types of nucleophilic substitution (case RX and ArX): Mechanism of SN1, SN2, SNi and Benzyne. Electrophilic substitution reactions: Definition, types and examples of electrophile - Electrophilic substitution reactions of hydrocarbons: Halogenation, sulphonation, nitration. Friedel crafts alkylation and acylation reaction. Nucleophilic addition reactions (case aldehydes and ketones): Polarity of C=O bond. General mechanism of nucleophilic addition reactions on aldehydes and ketones: HCN, HOH, ROH and NaHSO3 addition. Electrophilic addition reactions (case alkenes): General mechanism of electrophilic addition reactions on alkene - Addition of HBr [Markownikoff & Anti-Markownikoff (peroxide effect)] - Addition of alkene (polymerization of ethylene). Elimination reactions: Types of elimination reactions (case alkene and ethers. Greener synthesis of drug molecules (Aspirin and Ibuprofen)

Unit-V: STEREOCHEMISTRY AND SPECTROSCOPIC TECHNIQUES

Stereochemistry - Definition with examples: Geometrical isomers (alkene) and stereoisomers, symmetry, chirality, enantiomers, diastereomers, meso and racemic mixture. Representation of 3D structures: Wedge formula, Fischer projections, Newmann and Sawhorse formula (up to 2 carbons) - Conformational analysis: Ethane, butane and cyclohexane - Configurational analysis: Rules of RS nomenclature and application of RS nomenclature to molecules containing one chiral centre. Electronic spectroscopy: Principle, instrumentation, selection rules and medicinal application of fluorescence spectroscopy. Nuclear magnetic resonance spectroscopy (1H-NMR): Principle, instrumentation, chemical shift, coupling constant and application (structural identification of the compound C3H6O from 1H-NMR data). X-ray diffraction: Principle, instrumentation and applications X-ray diffraction.

List of Experiments:

- 1. Determination of Viscosity by Ostwald Viscometer
- 2. Determination of surface tension by stalagmometer.
- 3. Adsorption of acetic acid by charcoal.
- 4. Determination of chloride content of water.
- 5. Estimation of hardness of water by EDTA method.
- 6. Determination of the rate constant of a reaction
- 7. Thin layer chromatography.
- 8. Determination of the partition coefficient of a substance between two immiscible liquids
- 9. Determination of Saponification /acid value of oil.
- 10. Preparation of Aspirin
- 11. Potentiometric titration of strong acid vs strong base.
- 12. Potentiometric titration of weak acid vs strong base.
- 13. Determination of cell constant and conductance of solutions.

MATIODIAL CALCULUS AND	L	Τ	Р	С				
MATIORIUI: CALCULUS AND	3	1	0	4				
Due neguisite. Nil	Course Category: Basic Science and Mathematics							
Pre-requisite: Mil	Course Type : Theory							

Course Objective(s):

To enable the students to acquire knowledge and skills in basic components of calculus, to handle the situations involving multivariable calculus, and to diagonalize a symmetric matrix using eigenvalues and eigenvectors.

Course Outcome(s):

CO1	Know the fundamental theorems such as Rolle's theorem, Mean value theorem, Taylor's theorem and its applications.
CO2	<i>Understand the basic concepts of limit, continuity, derivative, partial derivative and total derivative and its applications.</i>
CO3	Solve the real world problems using differentiation and integration.
CO4	Understand the concepts of sequence, convergent of sequences, series and testing of convergent of series using different methods.
CO5	Find the solution of simultaneous linear equations using matrices and to find the eigen values and eigen vectors of a matrix, Cayley-Hamilon theorem and orthogonal transformations.

Mapping of Course Outcome(s):

						1									
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3												3		
CO2	3												3		
CO3	3												3		
CO4	3												3		
CO5	3												3		

Course Topics:

Unit-I: CALCULUS

Rolle's Theorem- Mean value theorems - Taylor's and Maclaurin theorems with remainders - indeterminate forms and L'Hospital's rule - Maxima and minima.

Unit-II: MULTIVARIABLE CALCULUS (DIFFERENTIATION)

Limit, continuity and partial derivatives - directional derivatives - total derivative - Maxima, minima and saddle points - Method of Lagrange multipliers.

Unit-III: CALCULUS

Curvature (Cartesian coordinates) - Evolutes and involutes; Evaluation of definite and improper integrals; Beta and Gamma functions and their properties; Applications of definite integrals to evaluate surface areas and volumes of revolutions.

Unit-IV: SEQUENCES AND SERIES

Convergence of sequence and series, tests for convergence; Power series, Taylor's series, series for exponential, trigonometric and logarithm functions

Unit-V: MATRICES

System of linear equations; Symmetric, skew-symmetric and orthogonal matrices; Determinants; Eigenvalues and eigenvectors; Cayley-Hamilton Theorem - Diagonalization of matrices - Orthogonal transformation-Reduction of Quadratic form to Canonical form.

Text Book(s):

MAT18R102 : MULTIPLE INTEGI	MAT18R102 : MULTIPLE INTEGRATION, ORDINARY								
DIFFERENTIAL EQUATIONS VARIABLE	3	1	0	4					
Dre requisites Nil	cience a	and Ma	themati	CS					
rre-requisite: Mil	Course Type : Theory								

Course Objective(s):

To enable the students to understand the concepts of multiple integrations, their applications, and to handle analytic functions on complex plane and perform complex integration.

Course Outcome(s):

Understand the concepts of double and triple integral and its applications.
Know about the applications of double and triple integral in vector calculus.
Know the methods of solving differential equations of first and second orders.
Understand the concepts of analytic functions, conformal mappings and bilinear
transformations.
Understand the concepts of singularity, residues and evaluation of certain improper
integrals.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3												3		
CO2	3												3		
CO3	3												3		
CO4	3												3		
CO5	3												3		

Course Topics:

Unit-I: MULTIVARIABLE CALCULUS (INTEGRATION)

Multiple Integration: Double integrals (Cartesian), change of order of integration in double integrals, change of variables (Cartesian to polar), Applications: areas and volume; Triple integrals (Cartesian), orthogonal curvilinear coordinates, Simple applications involving cubes, sphere and rectangular parallelepipeds

Unit-II: INTEGRAL THEOREMS

Gradient, curl and divergence. Scalar line integrals, vector line integrals, scalar surface integrals, vector surface integrals, Theorems of Green, Gauss and Stokes.

Unit-III: ORDINARY DIFFERENTIAL EQUATIONS

Exact, linear and Bernoulli's equations, Euler's equations, Equations not of first degree: equations solvable for p, equations solvable for x and Clairaut's type. Second order linear differential equations with variable coefficients, method of variation of parameters, Cauchy-Euler equations.

Unit-IV: COMPLEX VARIABLE – DIFFERENTIATION

Differentiation, Cauchy-Riemann equations, analytic functions, harmonic functions; elementary analytic functions (exponential, trigonometric, logarithm) and their properties; Conformal mappings, Mobius transformations and their properties.

Unit-V: COMPLEX VARIABLE – INTEGRATION

Contour integrals, Cauchy Integral formula (without proof); Taylor's series, zeros of analytic functions, singularities, Laurent's series; Residues, Cauchy Residue theorem (without proof), Evaluation of definite integral

involving sine and cosine, Evaluation of certain improper integrals (Integration around small semicircles and rectangular contours)

CO1	3												3		
CO2	3												3		
CO3	3												3		
CO4	3												3		
CO5	3												3		

Course Topics:

Unit-I: PARTIAL DIFFERENTIAL EQUATIONS

First order partial differential equations, solutions of first order linear and non-linear PDEs. Solution to homogenous and non-homogenous linear partial differential equations second and higher order by complimentary function and particular integral method.

Unit-II: APPLICATIONS OF PARTIAL DIFFERENTIAL EQUATIONS

Flows, vibrations and diffusions, second-order linear equations and their classification, Initial and boundary conditions, solution of the wave equation and diffusion equation by the method of separation of variables, The Laplacian in plane, cylindrical and spherical polar coordinates and solutions.

Unit-III: BASIC PROBABILITY AND RANDOM VARIABLES

Axiomatic definition of Probability - Conditional probability - Independent events - Total probability - Bayes theorem - Random variables - Discrete random variable - Probability mass function - Continuous random variable - Probability density functions - Cumulative distribution function- Properties- Expectation.

Unit-IV: STANDARD DISTRIBUTIONS AND BIVARIATE DISTRIBUTIONS

Binomial, Poisson, Uniform, Exponential and Normal distributions and their properties. Two dimensional random variables – Joint probability density function – Cumulative distribution function – Marginal density function

Unit-V: STATISTICS

Moments, skewness and Kurtosis - evaluation of statistical parameters for Binomial, Poisson and Normal distributions, Correlation and regression – Rank correlation- Curve fitting by the method of least squares- fitting of straight lines and second degree parabolas.

DIT19D101 . DIOLOCY FOI	BIT18R101 : BIOLOGY FOR ENGINEERS								
BITIORIUI: BIOLOGI FOI	3	0	0	3					
Due neguiaites Nil	Course Category: Basic Science and Mathematics								
Pre-requisite: Nil	Course Type : Theory								

Course Objective(s):

Any engineer, irrespective of the parent discipline (mechanical, electrical, civil, chemical, metallurgical, etc.,) has a high probability of using the disciplinary skills toward designing/improving biological systems in the future. This course is designed to convey the essentials of cell and molecular biology to provide a frame-work for more specific understanding, and contribution by any engineer.

Course Outcome(s):

CO1	Describe the fundamentals of cell structure and cell cycle
CO2	Understand the classification and functions of biomolecules
CO3	Elaborate the basic cellular mechanisms such as replication, transcription and translation
CO4	Describe the underlying concepts of infection and immunity
CO5	Explain various applications of biology

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	2		2		3									
CO2	3	2		3		2									
CO3	3			3		2									
CO4	3	2		3		3									
CO5	3	2		2											

Course Topics: Unit-I: INTRODUCTION

Fundamental difference between science and engineering- comparison between eye and camera, Bird flying and aircraft; major discoveries in biology-; Classification based on: Cellularity- Unicellular and Multicellular; Ultra structure - prokaryotes and eukaryotes; three major kingdoms of life; Cell structure, intracellular organelles and their functions, comparison of plant and animal cells- Overview of Cell cycle and cell division

Unit-II: BIOMOLECULES

Chemistry of biomolecules: Carbohydrates, Lipids, Proteins; classification of amino acids; classification of proteins based on structure and functions; Nucleic acids -types, structure and function of DNA and RNA

Unit-III: GENES TO PROTEINS

Gene, Genome and chromosome; Central dogma of molecular biology; Classical experiments of DNA: Griffith and, Avery, McCarty and MacLeod, Meselson and Stahl - DNA replication, Transcription and Translation

Unit-IV: MICROBIOLOGY

Microscopy; Microbes as infectious agents - malaria, tuberculosis, typhoid, polio, dengue, AIDS;; cultivation of bacteria. Immunity - innate and acquired immunity - organs and cells of the immune system - classification of antibodies - types of T cells - transplantation, autoimmunity overview

Unit-V: APPLICATIONS OF BIOLOGY

Healthcare-antibiotics, vaccines, monoclonal antibodies, insulin and interferons; Beneficial bacteria - probiotic bacteria, nitrogen fixing bacteria, fermentation and fermented foods and products Environmental - waste water treatment, bioremediation; Biomaterials and biopolymers for medical and environmental applications; Biosensors

Text Book(s):

HUMANITIES AND SOCIAL SCIENCES

HSS18R151 ENGLISH FOR TECHNICAL COMMUNICATION

 T
 P
 C

 0
 2
 3

Pre-requisite:BasicEnglishKnowledgeatCourse Category: Humanities and Social SciencesSchool LevelCourse Type:Theory with Practical

Course Objective(s):

To help the learner develop listening skills by providing them with inspiring material

To help the learner acquire the ability to speak comfortably in real-life situations

To inculcate in students a taste for English so that they take to reading novels, dailies, and motivational books and dailies

To help learners passionately improve their vocabulary

To enable students to write all kinds of letters, job applications, and reports

To help learners sit for the BEC Examinations

Course Outcome(s):

After completing this course, the student will be able to:

- **CO1:** Speak good English covering their day to day activities
- **CO2:** Analyse the importance of Listening to communicate well
- **CO3:** Make Situational Dialogues on emerging multiple situations
- CO4: Read aloud Newspapers and other Texts
- **CO5:** Compose effective error free composition

Mapping of Course Outcome(s):

CO /		PO													
PO	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3
CO1		2												3	2
CO2			2											3	1
CO3				1										3	2
CO4	2													3	3
CO5											2			3	3

Course Topics:

1 UNIT I – VOCABULARY BUILDING

- 1.1 The concept of word formation
- 1.2 Root words from foreign languages and their use in English
- 1.3 Prefixes and suffixes; word derivatives using them
- 1.4 Synonyms, Antonyms and standard Abbreviations

2 UNIT II – BASIC WRITING SKILLS

- 2.1 Sentence structures
- 2.2 Use of phrases and clauses in sentences
- 2.3 Creating Coherence
- 2.4 Techniques for Writing Precisely

3 UNIT III – IDENTIFYING COMMON ERRORS IN WRITING

- 3.1 Tenses
- 3.2 Subject verb agreement
- 3.3 Noun Pronoun Agreement
- 3.4 Verbs Transitive, Intransitive
- 3.5 Misplaced Modifiers
- 3.6 Articles
- 3.7 Prepositions
- 3.8 Redundancies and Clichés
- 3.9 Direct, Indirect speech
- 3.10 Infinitives, Gerunds

3.11 Comparison of adjectives

4 UNIT IV NATURE AND STYLE OF SENSIBLE WRITING

- 4.1 Describing
- 4.2 Defining
- 4.3 Classifying
- 4.4 Providing examples or evidence
- 4.5 Writing introduction or conclusion

5 UNIT V WRITING PRACTICES

- 5.1 Comprehension
- 5.2 Precis writing
- 5.3 Essay writing
- 5.4 Letter writing
- 5.5 Instructions
- 5.6 Paragraph development

6 UNIT VI – ORAL COMMUNICATION

- 6.1 Listening comprehension
- 6.2 Pronunciation, intonation, stress and rhythm
- 6.3 Common everyday situations: Conversations and dialogues
- 6.4 Interviews
- 6.5 Formal presentations

BASIC ENGINEERING
EFE19D172 . DACIC ELECTDIC	L	Τ	Р	С						
EEEIONI/2: DASIC ELECTRICA	3	1	2	5						
Due neguisites Nil	Course Category: Basic Engineering									
rre-requisite: Mil	Course Type : Integrated Course									

Course Objective(s):

To focus the fundamental ideas of the Electrical Engineering by providing wide exposure to the basic concepts of Electrical Engineering such as DC Circuits, AC Circuits, electrical machines, measuring instruments and electrical installations etc.

Course Outcome(s):

CO1	To Apply basic laws of electricity in DC Circuits
CO2	To Apply basic laws of electricity in AC Circuits
CO3	To study the working principles of dc Machines and Transformers
CO4	To study and working principle of AC Machines
CO5	To study the basic components of Low Voltage Electrical Installations

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	2											3		
CO2	3	2	1										3	1	
CO3	3	2											3		
CO4	3	2											3		
CO5	3	2					1					1	3		

Course Topics: Unit-I: DC CIRCUITS

Electrical circuit elements (R, L and C), voltage and current sources, Series and Parallel circuits. Kirchhoff current and voltage laws, analysis of simple dc circuits-Mesh and Nodal methods. Superposition, Thevenin and Norton Theorems. Time-domain analysis of I order RL and RC circuits

Unit-II: AC CIRCUITS

Representation of sinusoidal waveforms, RMS and Average values - form and peak factors, phasor representation, real power, reactive power, apparent power, power factor, Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel), resonance. Three-phase balanced circuits, voltage and current relations in star and delta connections.

Unit-III: DC MACHINES AND TRANSFORMERS

Construction and working principle of DC Generator and DC Motor and its emf equations- related problems. Transformer – construction, working and types- ideal and practical transformer, equivalent circuit, losses in transformers, regulation and efficiency.

Unit-IV: AC MACHINES

Constructional details - Principle of operation - Torque-slip characteristics - Starting torque - Relation between torque and slip - Losses and efficiency. Types of single phase induction motor- construction and working of alternators

Unit-V: ELECTRICAL INSTALLATIONS

Components of LT Switchgear: Switch Fuse Unit (SFU), MCB, ELCB, MCCB, Types of Wires and Cables, Earthing. Types of Batteries, Important Characteristics for Batteries. Elementary calculations for energy consumption, power factor improvement and battery Backup.

List of Experiments:

- 1. Verification of Kirchhoff's Laws
- 2. Verification of AC voltage measurements
- 3. Measuring the steady-state and transient time-response of R-L, R-C, and R-L-C Circuits.
- 4. Demonstration of DC Motor
- 5. Demonstration of Transformer
- 6. Load test on three-phase transformer
- 7. Open circuit and short circuit tests on single phase transformer
- 8. Torque Speed Characteristic of separately excited dc motor.
- 9. Demonstration of Induction Motor
- 10. Load test on three-phase squirrel cage induction motor.
- 11. Study basic electrical installation components for LT switchgear

MEC19D151 - ENCINEEDING OD	L	Τ	Р	С						
MECIORISI : ENGINEERING GR	MEC10R151: ENGINEERING GRAPHICS & DESIGN									
Due neguisites Nil	Course Category: Basic Engineering									
Pre-requisite: Mil	Course Type : Theory with practical									

Course Objective(s):

This course aims to introduce the concept of graphic communication, develop the drawing skills for communicating concepts, ideas and designs of engineering products, Demonstrate skills in interpreting, and producing engineering drawings accurately and to give exposure to national standards relating to engineering drawing

Course Outcome(s):

CO1	Create the projection of points in all quadrants and straight lines
CO2	Construct the projections of planes and solid objects with refer to reference planes
CO3	Illustrate the true shape of truncated solids in both the manual and computerized manner
CO4	Develop surfaces of truncated solids in both the manual and computerized man
CO5	Apply orthographic and isometric projections in both the manual and computerized man

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2		2										1	1	
CO2		3										1	1	1	
CO3	2		3		3		3					2	3	2	3
CO4	1	2			3		3					3	3	2	3
CO5	3		3		3		3					3	3	2	3

Course Topics:

Unit-I: PROJECTION OF POINTS AND STRAIGHT LINES

Importance of graphics – use of drafting instruments – BIS conventions and specifications – size, layout and folding of drawing sheets – lettering dimensioning and scales - Projection of points, located in all quadrants - projection of straight lines located in the first quadrant, determination of true lengths and true inclinations

Unit-II: PROJECTION OF PLANES AND SOLIDS

Projection of polygonal surface and circular lamina located in first quadrant inclined to one or both reference planes-Projection of solids like prisms, pyramids, cylinder and cone when the axis is inclined to one reference plane by change of position method

Unit-III: SECTION OF SOLIDS

Section of simple solids like prisms, pyramids, cylinder and cone in vertical position by cutting planes inclined to any one of the reference planes, obtaining true shape of section

Unit-IV: DEVELOPMENT OF SURFACES

Development of lateral surfaces of simple and truncated solids - prisms, pyramids, cylinders and cones

Unit-V: ORTHOGRAPHIC AND ISOMETRIC PROJECTION

Orthographic principles – missing view - free hand sketching in first angle projection from pictorial views. Principles of isometric projection – isometric view and projections of simple solids, truncated prisms, pyramids, cylinders and cones. Introduction to CAD software – menus and tools – drafting platform demonstration

Practical Modules:

- 1. Construction of conic sections using CAD software
- 2. Construction of simple planes using exclusive commands like extend, trim etc.,
- 3. Construction of 3D model solids and sectional views
- 4. Generating 2D orthographic blue prints from 3D part models
- 5. Vectorization of simple building plan and elevation

MEC19D311 . ENCINEEDIN	L	Т	Р	С					
WIECION211: EINGINEENIN	3	1	0	4					
Dre requisiter Nil	Course Category: Basic Engineering								
rre-requisite: Nil	Course Type : Theory								

Course Objective(s):

The course uses the Laws of Mechanics to predict forces in and motions of machines and structures. The course is the key prerequisite course to sequences of courses dealing with mechanics of machines, stress analysis and design of mechanical systems.

Course Outcome(s):

CO1 Expl	ain the vectorial and scalar representation of forces and moments of particles and rigid
bodi	es both in two dimensions and in three dimensions.
CO2 Appl	ly the knowledge of trusses in frames, beams and machine components.
CO3 Cont	trast the effect of friction on equilibrium.
CO4 Illus	trate the importance of properties of surfaces and solids.
CO5 Dem	constrate the dynamic equilibrium equation.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	3	2	1									3		
CO2	3	2	2	1									2		
CO3	3	3	2	1									3		
CO4	3	2	2	1									2		
C05	3	1	1	1									1		

Course Topics:

Unit-I: STATICS OF PARTICLES AND RIGID BODIES

Six Fundamental principles and concepts - vector algebra - Force Systems Basic concepts, Particle equilibrium in 2-D & 3-D - System of Forces, Coplanar Concurrent Forces, Components in Space – Resultant - Equations of Equilibrium of Coplanar Systems and Spatial Systems. Rigid Body equilibrium in 2-D & 3-D - Moment of Forces and its Application - Couples and Resultant of Force System - Equilibrium of System of Forces, Free body diagrams - Equations of Equilibrium of Coplanar Systems and Spatial Systems.

Unit-II: ANALYSIS OF TRUSSES

Basic Structural Analysis- Equilibrium in three dimensions - Method of Sections- Method of Joints- How to determine if a member is in tension or compression- Simple Trusses- Zero force members- Beams & types of beams- Frames & Machines.

Unit-III: FRICTION

Types of friction, Limiting friction, Laws of Friction, Static and Dynamic Friction - Motion of Bodies, simple contact friction, sliding block, wedge friction, screw jack & differential screw jack, rolling resistance.

Unit-IV: PROPERTIES OF SURFACES AND SOLIDS

Centroid of simple figures from first principle, centroid of composite sections - Centre of Gravity and its implications - Area moment of inertia - Definition, Moment of inertia of plane sections from first principles, Theorems of moment of inertia, Moment of inertia of standard sections (T section and I section) - Mass moment inertia of circular plate, Cylinder, Cone, Sphere- Principal moment of inertia.

Unit-V: DYNAMICS

Review of particle dynamics - Displacements, velocity and acceleration, their relationship - Equations of motions - Rectilinear motion- Plane curvilinear motion - Newton's 2nd law- Impulse, momentum, impact - D'Alembert's principle and its applications in plane motion and connected bodies - Work energy principle and its application in plane motion of connected bodies - Virtual Work and Energy Method - Virtual displacements, principle of virtual work for particle and ideal system of rigid bodies.

CSE18R171 : PROGRAMMIN	L	Τ	Р	С				
SOLVING	SOLVING							
Bue negovicite. Nil	Course Category: Basic Engineering							
Pre-requisite: Nil	Course Type : Integrated	Course	e					

Course Objective(s):

To make the students to understand the basic concepts of programming language, rules to be followed while writing a program and how to compile and execute C programs.

Course Outcome(s):

CO1	Understand the basic programming concepts and syntax of C language
CO2	Develop efficient code using pointers, arrays and dynamic memory allocation techniques
CO3	Create user defined data types and functions to solve given problems
CO4	Design an efficient algorithm for a given problem
CO5	Build efficient code to solve the real-world problem

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	2											3		
CO2	3	2	2		1								3	2	
CO3	3	2	2		2								3	2	
CO4	3	2	2		2								3	2	
CO5	3	3	2		2								3	2	
CO6						1	1	1		1		1		1	1

Course Topics:

Unit-I: INTRODUCTION TO PROGRAMMING

Introduction to components of a computer system (disks, memory, processor, where a program is stored and executed, operating system, compilers etc.), Idea of Algorithm: steps to solve logical and numerical problems. Representation of Algorithm: Flowchart/ Pseudocode with examples, from algorithms to programs; source code, variables (with data types) variables and memory, locations, Syntax and Logical Errors in compilation, object and executable code, Arithmetic expressions and precedence, Conditional Branching and Loops, Writing and evaluation of conditionals and consequent branching, Iteration and loops.

Unit-II: ARRAYS AND STRINGS

Introduction - One dimensional and two-dimensional arrays – Declaration of arrays – Initializing and Accessing array elements – Strings: One dimensional character arrays - Declaration and String Initialization - String Manipulation - Multidimensional Arrays - Arrays of Strings

Unit-III: BASIC ALGORITHMS

Searching, Basic Sorting Algorithms (Bubble, Insertion and Selection), Finding roots of equations, notion of order of complexity through example programs (no formal definition required)

Unit-IV: FUNCTION

Functions (including using built in libraries), Parameter passing in functions, call by value, passing arrays to functions: idea of call by reference, Recursion, Recursion, as a different way of solving problems. Example programs, such as Finding Factorial, Fibonacci series, Ackerman function etc. Quick sort or Merge sort.

Unit-V: STRUCTURE, POINTERS & FILE HANDLING

Structures, defining structures and Array of Structures, Idea of pointers, defining pointers, Use of Pointers in self-referential structures, notion of linked list (no implementation), File handling (only if time is available, otherwise should be done as part of the lab)

List of Experiments:

- 1. Tutorial 1: Problem solving using computers
- 2. Lab 1: Familiarization with programming environment
- 3. Tutorial 2: Variable types and type conversions:
- 4. Lab 2: Simple computational problems using arithmetic expressions
- 5. Tutorial 3: Branching and logical expressions:
- 6. Lab 3: Problems involving if-then-else structures
- 7. Tutorial 4: Loops, while and for loops:
- 8. Lab 4: Iterative problems e.g., sum of series
- 9. Tutorial 5: 1D Arrays: searching, sorting:
- 10. Lab 5: 1D Array manipulation
- 11. Tutorial 6: 2D arrays and Strings
- 12. Lab 6: Matrix problems, String operations
- 13. Tutorial 7: Functions, call by value:
- 14. Lab 7: Simple functions
- 15. Tutorial 8 &9: Numerical methods (Root finding, numerical differentiation, numerical integration):
- 16. Lab 8 and 9: Programming for solving Numerical methods problems
- 17. Tutorial 10: Recursion, structure of recursive calls
- 18. Lab 10: Recursive functions
- 19. Tutorial 11: Pointers, structures and dynamic memory allocation
- 20. Lab 11: Pointers and structures
- 21. Tutorial 12: File handling:
- 22. Lab 12: File operations

MEC19D152 . ENCINEEDIN	L	Τ	Р	С					
VIECIONI52: ENGINEERIT	GFRACIICE	2	0	2	3				
Bue negovicites Nil	Course Category: Basic Engineering								
Pre-requisite: Mil	Course Type : Theory with	h pract	ical						

Course Objective(s):

Apply skills of basic mechanical engineering in diverse contexts including operation, application, classification, assemble, dismantle, maintenance and entrepreneurship, using critical thinking and judgment by theoretical and practice.

Course Outcome(s):

CO1	Apply coherent and advanced knowledge of Lathe machines and their operations
CO2	Summarize the various Air-conditioning methodologies and their maintenance procedure
CO3	Compare the working of Two stroke & Four stroke engines and apply professional practice
COS	to the operation and maintenance of Lead acid battery
CO4	Explain the working principle of Oven and Pumps and identify the working and
CU4	maintenance procedures
CO5	Identify the different types of Plumbing joints and demonstrate various layouts

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2		1			2			2			1	2		
CO2	2	1	2			2	2		2			2	2	1	
CO3	2		1			2	2		2			2	2		
CO4	2					2	1		2			1	1		
CO5	2					1			2			1	1		

Course Topics: Unit-I: BASIC MACHINING

Introduction - types of lathe machines - lathe accessories, work holding device and tool holding device - lathe operations - Calculation of MRR for simple turning operation. Introduction to CNC turning machines.

Unit-II: AIR CONDITIONING

Introduction, types of air conditioning system, working of commercial air conditioner, components of AC system, selection of suitable AC based on room size, AC ratings scheduled maintenance, assembling and dismantling of window AC

Unit-III: AUTOMOTIVE SYSTEMS

Introduction – Classification - Purpose, capacity, fuel source, transmission system - working of two stroke and four stroke engines. Introduction – types of batteries - construction – battery rating, scheduled maintenance of four wheeler and two wheeler batteries – assembling and dismantling of lead acid battery - testing of voltage

Unit-IV: ENERGY AND FLOW DEVICES

Types of energy devices (Gas stove, Induction, Micro-oven), working principle of induction and micro oven, commercial food preparing equipment, preventive maintenance check list, assembling and dismantling of gas stove. Introduction – types of pump - centrifugal, jet pump, working of centrifugal and jet pump, assembly and dismantling of pumps.

Unit-V: PLUMBING

Introduction - Plumbing Tools, Pipe – Piping layout symbol - Types of pipe joints - Pipe line diagram for shower, washbasin and overhead tank. Selection of materials for shower, washbasin and overhead tank layouts.

Practical Modules:

- 1. Plain turning operation in Lathe
- 2. Filling and evacuating refrigerant gas procedure in refrigerant kit
- 3. Study on vehicle smoke testing
- 4. Two wheeler carburetor check-up
- 5. Charging and draining of a Lead-acid battery
- 6. Study on diesel pump service
- 7. Dismantling and assembling of Gas stove.
- 8. L-Halving (Or) Corner Lap Joint.
- 9. Study on arc and gas welding practices
- 10. Plumbing layout for shower and washbasin connections
- 11. L-Fitting

ECEIQD222 . DASIC ELECTDON	L	Τ	Р	С					
ECEIOR222: DASIC ELECTRON	3	1	0	4					
Dre requisites Nil	Course Category: Basic Engineering								
rre-requisite: Mil	Course Type : Theory								

Course Objective(s):

To provide an overview of electronic device components to Mechanical engineering students

Course Outcome(s):

CO1	Understand the principles of semiconductor devices and their applications.
CO2	Design an application using Operational amplifier.
CO3	Understand the working of timing circuits and oscillators.
CO4	Understand logic gates, flip flop as a building block of digital systems.
CO5	Learn the basics of Electronic communication system.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	1										1			
CO2		3	2				1					2			
CO3	1	2													
CO4		3										3			
CO5		3					2					3			

Course Topics:

Unit-I: SEMICONDUCTOR DEVICES AND APPLICATIONS

Introduction to P-N junction Diode and V-I characteristics, Zener diode and its characteristics, Introduction to BJT, its input-output and transfer characteristics, BJT as a single stage CE amplifier, frequency response and bandwidth.

Unit-II: OPERATIONAL AMPLIFIER AND ITS APPLICATIONS

Introduction to Op-Amp, CMRR, Block Diagram, Pin Configuration of 741 Op-Amp, Characteristics of Ideal Op-Amp, Concept of Virtual Ground, summing and difference amplifier, unity gain buffer, integrator and differentiator.

Unit-III: TIMING CIRCUITS AND OSCILLATORS

555 and its applications as astable and mono-stable multi-vibrators, positive feedback, Barkhausen's criteria for oscillation, R-C phase shift and Wein bridge oscillator.

Unit-IV: DIGITAL ELECTRONICS FUNDAMENTALS

Difference between analog and digital signals, Boolean algebra, Basic and Universal Gates, Symbols, Truth tables, logic expressions, Logic simplification using K- map, multiplexers, demultiplexers, flip-flops, Block diagram of microprocessor/microcontroller and their applications.

Unit-V: ELECTRONIC COMMUNICATION SYSTEMS

The elements of communication system, IEEE frequency spectrum, Transmission media: wired and wireless, need of modulation, Mobile communication systems: cellular concept and block diagram of GSM system.

Text Book(s):

1. A.David Bell, "Electronic Devices and Circuits", Edition: 5, Oxford University Press, 2008.

2. Floyd, "Electronic Devices", Edition: 9, Pearson Education , 2016.

PROGRAM CORE COURSES

MEC18D202 . THED	L	Τ	Р	С					
WIECIOR202 : I HER	3	1	0	4					
Bue neguicite. Nil	Course Category: Program Core Courses								
rre-requisite: mit	Course Type : Theory								

Course Objective(s):

- To learn about work & heat interactions and energy balance in systems
- To learn about application of 1st law of thermodynamics
- To learn about second law of thermodynamics and its limitation
- To learn about the properties of pure substances and related application

Course Outcome(s):

CO1	Outline the fundamental concepts and first law of thermodynamics
CO2	Interpret the idea of second law of thermodynamics
CO3	Construct the limitation of thermodynamic laws
CO4	Extend the properties of pure substances
CO5	Illustrate the basic ideas about the properties and process involved in psychrometry

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	2	1					1				1	3		
CO2	3	2	1					1				1	3		
CO3	3	3	1	2				1				1	3		
CO4	3	2						1				1	3		
CO5	3	2	1					1				1	3		

Course Topics:

Unit-I: FUNDAMENTALS OF THERMODYNAMICS, ZEROTH AND FIRST LAW

Fundamentals - System & Control volume; Property, State & Process; Work – modes of work; Path dependence of displacement work, Temperature, Definition of thermal equilibrium and Zeroth law and Temperature scales, first Law for Cyclic & Non-cyclic processes; Concept of total energy E; Various modes of energy, Internal energy and Enthalpy. First Law for Flow Processes - Derivation of general energy equation for a control volume, Steady state steady flow processes including throttling; Examples of steady flow devices and First law applications for system and control volume.

Unit-II: SECOND LAW OF THERMODYNAMICS

Second law - Definitions of direct and reverse heat engines; Definitions of thermal efficiency and COP; Kelvin-Planck and Clausius statements; Definition of reversible process; Internal and external irreversibility; Carnot cycle; Absolute temperature scale.

Unit-III: ANALYSIS OF SECOND LAW OF THERMODYNAMICS

Clausius inequality; Definition of entropy S ; Demonstration that entropy S is a property, Illustration of processes in T-s coordinates, Evaluation of S for solids, liquids, ideal gases. Principle of increase of entropy, Definition of Isentropic efficiency for compressors turbines and nozzles, Irreversibility and Availability and Illustration of processes in T-s coordinates

Unit-IV: PURE SUBSTANCES

Definition of Pure substance, Properties of two phase systems - Const. temperature and Const. pressure heating of water; Definitions of saturated states; P-v-T surface; Use of steam tables Saturation tables; Superheated tables; Identification of states & determination of properties, Mollier's chart.

Unit-V: PSYCHROMETRY

Psychrometry - atmospheric air and psychrometric properties – dry bulb temperature, wet bulb temperature, dew point temperature, partial pressures, specific and relative humidity, enthalpy and adiabatic saturation temperature - construction and use of psychrometric chart - analysis of various processes- heating, cooling, dehumidifying and humidifying- adiabatic mixing of stream, summer and winter air-conditioning.

MEC19D209 · MATEDIAL	L	Т	Р	С					
MECION200 : MATERIA	3	0	0	3					
Due no suicites Nil	Course Category: Program Core Courses								
rre-requisite: mi	Course Type : Theory								

Course Objective(s):

1. Understanding of the correlation between the internal structure of materials, their mechanical properties and various methods to quantify their mechanical integrity and failure criteria.

2. To provide a detailed interpretation of equilibrium phase diagrams

3. Learning about different phases and heat treatment methods to tailor the properties of Fe-C alloys.

Course Outcome(s):

CO1	Identify the micro-structures and properties of materials
CO2	Ability to construct the phase diagrams of various solid solutions and to identify the
02	presence of various phases with the addition of alloying elements
CO3	Discuss various heat-treatment procedures for specific applications
CO4	Categorize the plastics, ceramics and composites to replace metallic materials in several
CO4	machineries
CO5	Classify various properties of materials and to identify appropriate materials for different
05	applications and environmental conditions.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	2	1	2									3	1	
CO2	3		2	3									3	3	
CO3	3	2	1	2									3		
CO4	3	2	2	3									3	2	
CO5	3	3	2										3	3	

Course Topics: Unit-I: BASICS

Types of bonds in solids, crystal structure of metals, defects in metallic structure, plastic deformation of metals, binary alloys - mechanism of plastic deformation, slip, twinning, stacking faults, deformation bands and strain hardening.

Unit-II: CONSTITUTION OF ALLOYS AND PHASE DIAGRAM

Constitution of alloys – solid solutions - substitutional and interstitial, phase diagrams, isomorphous, eutectic, peritectic, eutectoid and peritectroid reactions, iron – iron carbide equilibrium diagram - classification of steel and cast iron – microstructure, properties and applications.

Unit-III: HEAT TREATMENT

Annealing - full annealing, stress relief, recrystallisation and spheroidizing – normalizing - hardening and tempering of steel - isothermal transformation diagrams – cooling curves superimposed on I.T. diagram - hardenability, jominy end quench test – austempering, martempering – case hardening - carburising, nitriding, cyaniding, carbonitriding – flame and induction hardening.

Unit-IV: ALLOYS AND POLYMERS

Nickel and nickel alloys – inconel, Monel, etc , Copper and copper alloys – brass, bronze and cupronickel – aluminum and al-cu – precipitation strengthening treatment – polymers, composites, ceramics, glasses- their fabrication, processing methods, engineering properties and applications.

Unit-V: TESTING OF MATERIALS AND FRACTURE

Mechanical properties of materials, testing of materials - surface modifications of metals for specific engineering application, tribological properties of metals and non-metals - types of fracture – testing of materials under tension, compression and shear loads – hardness tests (Brinell, Vickers and Rockwell), impact test- Izod and Charpy - fatigue and creep test.

MECIONZIU: INSTRUMENTATI	3	0	0	3					
Due neguigites Nil	Course Category: Program Core Courses								
Pre-requisite: Nil	Course Type : Theory								

Course Objective(s):

1. To provide a basic knowledge about measurement systems and their components

2. To learn about various sensors used for measurement of mechanical quantities

3. To learn about system stability and control

4. To integrate the measurement systems with the process for process monitoring and Control

Course Outcome(s):

CO1	Interpret the basic concepts of measurement
CO2	Illustrate the response of the signals and their conditioning
CO3	Relate the sensor basics and its applications
CO4	Make use of sensor for industrial applications
CO5	Solve the control system for the instruments

Mapping of Course Outcome(s):

						1									
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	2		1									2		
CO2	3	2		1									2		
CO3	3	2		1	2								2		
CO4	3	2		1	2										
CO5	3	2		1											

Course Topics:

Unit-I: MEASUREMENTS

SI units, systematic and random errors in measurement, expression of uncertainty - accuracy and precision index, propagation of errors. PMMC, MI and dynamometer type instruments; dc potentiometer; bridges for measurement of R, L and C, Q -meter. Measurement of voltage, current and power in single and three phase circuits; ac and dc current probes; true rms meters, voltage and current scaling, instrument transformers, timer/counter, time, phase and frequency measurements, digital voltmeter, digital multimeter; oscilloscope, shielding and grounding.

Unit-II: SIGNAL PROCESSING AND CONDITIONING

Periodic, aperiodic and impulse signals; Laplace, Fourier and z -transforms; transfer function, frequency response of first and second order linear time invariant systems, impulse response of systems; onvolution, correlation. Discrete time system: impulse response, frequency response, pulse transfer function; DFT and FFT; basics of IIR and FIR filters.

Unit-III: MICRO SENSORS AND ACTUATORS

Micro Sensors: Principles and examples, Force and pressure micro sensors, position and speed micro sensors, acceleration micro sensors, chemical sensors, biosensors, temperature micro sensors and flow micro

sensors.Micro Actuators: Actuation principle, shape memory effects-one way, two way and pseudo elasticity. Types of micro actuators- Electrostatic, Magnetic, Fluidic, Inverse piezo effect, other principles.

Unit-IV: SENSORS AND INDUSTRIAL INSTRUMENTATION

Resistive-, capacitive-, inductive-, piezoelectric-, Hall Effect sensors and associated signal conditioning circuits; transducers for industrial instrumentation: displacement (linear and angular), velocity, acceleration, force, torque, vibration, shock, pressure (including low pressure), flow (differential pressure, variable area, electromagnetic, ultrasonic, turbine and open channel flow meters) temperature (thermocouple, bolometer, RTD (3/4 wire), thermistor, pyrometer and semiconductor); liquid level, pH, conductivity and viscosity measurement.

Unit-V: CONTROL SYSTEMS

Feedback principles, signal flow graphs, transient response, steady -state-errors, Bode plot, phase and gain margins, Routh and Nyquist criteria, root loci, design of lead, lag and lead -lag compensators, state -space representation of systems; time- delay systems; mechanical, hydraulic and pneumatic system components, synchro pair, servo and stepper motors, servo valves; on- off, P, P -I, P -I-D, cascade, feed forward, and ratio controllers.

MEC19D271 - STDENCTH O	L	Τ	Р	С	
MECION2/1: SIKENGIH U	3	0	2	4	
Pre-requisite: MEC18R211 -	Core C	Courses			
Engineering Mechanics	Course Type : Integrated (Course			

Course Objective(s):

To acquire knowledge in the concepts of stress, strain and deformation of solids and two dimensional bodies, beams and supports, beams deflection, torsion in springs and shafts

Course Outcome(s):

CO1	Analyse the simple stresses in bars, composite bars and thermal stresses
CO2	Analyse the stresses in two dimensional bodies and evaluating the deformation in thin
02	cylinder and spherical shells
CO2	Demonstrate shear force, bending moment and stress distribution of various types of beams
005	with different support
CO4	Analyzing the deflection of the beams through various methods
COF	Illustrate the deflection of all types of shafts due to torsion and deformation various types of
05	springs

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	2	3	2	1								3		1
CO2	3	2	3	2	2								3		1
CO3	3	2	3	2	1								3		1
CO4	3	2	3	2	1								3		1
CO5	3	2	3		2								3		1

Course Topics:

Unit-I: STRESS, STRAIN AND DEFORMATION IN SOLIDS

Tension, compression and shear stresses – Hook's law – stress- ultimate stress and working stress – elastic constants and relationships between them – composite bars – thermal stresses.

Unit-II: STRESS AND DEFORMATION IN TWO DIMENSIONAL BODIES

Two dimensional state of stress at a point – normal and shear stresses on any plane, principal planes and principal stresses – graphical method– Mohr's Circle - stresses and deformations in thin cylinders and spherical shells due to internal pressure

Unit-III: BEAMS AND SUPPORTS

Types of beam supports – cantilevers, simply supported, overhanging beams. Types of loadings – shear force – bending moment diagram. Theories of bending – bending stress distribution – load carrying capacity for point and distributed loads.

Unit-IV: DEFLECTION IN BEAMS

Deflection in beams using double integral method – area moment method for computation of slopes and deflection in beams – moment of inertia – Maxwell's reciprocal theorems.

Unit-V: TORSION IN SPRINGS AND SHAFTS

Torsional stresses and deformation in solid shafts, hollow shafts– deflection in solid shafts for fixed ends. Helical springs – leaf springs – stresses in springs – Torsion and deformation – deflections in spring

List of Experiments:

- 1. Tension test on mild steel rod
- 2. Compression test
- 3. Torsion test on mild steel rod
- 4. Impact test on metal specimen
- 5. Hardness test on metals Brinell, Rockwell hardness number
- 6. Deflection test on beams
- 7. Stiffness test on helical springs.
- 8. Double shear test on mild steel rod.
- 9. Pin on disk exercise on mild steel plate.

MEC19D272 . EL LIDMECHANICO	L	Т	Р	С					
MIECION2/2: FLUIDMECHANICS	3	0	2	4					
Due neguigites Nil	Course Category: Program Core Courses								
rre-requisite: Mil	Course Type : Integrated (Course							

Course Objective(s):

To covert the basic principles and equation of fluid mechanics and to present numerous and diverse real world engineering examples to give students a feel for how fluid mechanics is applied in engineering practice.

Course Outcome(s):

CO1	Identity the different properties of fluid and learning the different types of pressure
COI	measuring devices for various applications.
CO2	Interpret the kinematics and dynamics of fluid flow and analyze the Bernoulli's equation to
02	real time problem
CO3	Judging the different types of losses occurs in a pipe when fluid flows
CO4	Contrast the working principle of different turbines and analyze the performance
04	Calculation of different turbines
CO5	Categorize the working principles of different pumps and focus the performance
05	Calculation of different pumps

Mapping of Course Outcome(s):

		0													
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	2	2	2	2				2			2	2	2	
CO2	3	2	2	2	2				2			2	2	2	
CO3	3	2	2	2	2				2			2	2	2	
CO4	3	2	2	2	2				2			2	2	2	
CO5	3	3	1	1					2			2	2	2	

Course Topics:

Unit-I: BASIC CONCEPTS AND PROPERTIES

Fluid–definition, distinction between solid and fluid-units and dimensions, properties of fluids-density, specific weight, specific volume, specific gravity, temperature, viscosity, compressibility, vapour pressure, capillary and surface tension- fluid statics-concept of fluid static pressure, absolute and gauge pressures-pressure measurements by manometers.

Unit-II: FLUID KINEMATICS AND FLUID DYNAMICS

Fluid kinematics - flow visualization, lines of flow, types of flow, velocity field and acceleration, continuity equation(one and three dimensional differential forms)-equation of streamline, stream function, velocity potential function, circulation, flow net, fluid dynamics-equations of motion, Euler's equation along a streamline, Bernoulli's equation, applications - Venturimeter, Orifice meter, Pitot tube - dimensional analysis - Buckingham's Π theorem and its applications-similarity laws and models

Unit-III: INCOMPRESSIBLE FLUID FLOW

Viscousflow-Navier-Stoke'sequation(Statement only)-shearstress, pressure gradient relationship, Couette flowlaminar flow between parallel plates, Laminar flow through circular tubes (Hagen Poiseulle's) - flow through pipes - Darcy - Weisback's equation, Moody's diagram- friction factor minor losses – flow through pipes in series and in parallel –boundary layer flows, boundary layer thickness, boundary layer separation, measures of boundary layer thickness

Unit-IV: HYDRAULIC TURBINES

Fluid machines-definition and classification-exchange of energy-Euler's equation for turbo machinesconstruction of velocity vector diagrams- head and specific work – components of energy transfer-degree of reaction. Hydro turbines-definition and classifications- Pelton wheel, Francis turbine, propeller turbine, Kaplan turbine–working principles-velocity triangles, work done ,specific speed, efficiencies, performance curve for turbines.

Unit-V: HYDRAULIC PUMPS

Pumps- definition and classifications - Centrifugal pump - classifications, working principle, velocity triangles, specific speed, efficiency and performance curves - reciprocating pump classification, working principle, indicator diagram, work saved by air vessels and performance curves - cavitations in pumps - rotary pumps - working principles of gear and vane pumps, performance of positive displacement pump.

List of Experiments:

- 1. Determination of the Coefficient of discharge of given Orifice meter.
- 2. Determination of the Coefficient of discharge of given Venturimeter.
- 3. Calculation of the rate of flow using Rotameter.
- 4. Determination of friction factor for a given set of pipes.
- 5. Conducting experiments and drawing the characteristic curves of Centrifugal pump / Submergible pump.
- 6. Conducting experiments and drawing the characteristic curves of reciprocating pump.
- 7. Conducting experiments and drawing the characteristic curves of Gear pump.
- 8. Conducting experiments and drawing the characteristic curves of Pelton wheel.
- 9. Conducting experiments and drawing the characteristics curves of Francis turbine.
- 10. Conducting experiments and drawing the characteristic Kaplan turbine

MEC19D274 . THEDMAL E	L	Τ	Р	С			
VIEC18K274: I HERWAL E	3	0	2	4			
Pre-requisite: MEC18R202-	Pre-requisite: MEC18R202- Course Category: Program						
Thermodynamics	Course Type : Integrated (Course					

Course Objective(s):

This course will make the student to understand the process and applications undergoing with respect to the gas power cycles, nozzles, diffusers and refrigeration system. This would make them to thorough the concepts with elaborate idea and analysis with some practical Knowledge.

Course Outcome(s):

CO1	Employ the basic concepts behind the gas power cycles with ability to acquire solutions.
CO2	Interpret the knowledge gained in the concepts on flow of steam through nozzle, diffuser
02	and turbines
CO3	Apply pure substance behavior in vapour power cycles
CO4	Analyze and acquire solutions to the problems involved in the air compressors
CO5	Solve the basic problems and interpret the concepts behind the refrigeration system

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	3							3	2		2	3	2	
CO2	3	2										2	3		
CO3	3	3							3	2		2	3	2	
CO4	3	2										2	3		
CO5	3	2				2						2	3	1	

Course Topics: Unit-I: GAS POWER CYCLES

Air standard Otto, Diesel and Dual cycles-Air standard Brayton cycle –Calculation of mean effective pressure and air standard efficiency, effect of reheat, regeneration and intercooling.

Unit-II: NOZZLES, DIFFUSER AND TURBINES

Flow of steam through nozzles & Shape of nozzles - Effect of friction - Critical pressure ratio - Supersaturated flow - Steam turbine – Impulse and Reaction principles - Compounding, velocity diagrams for simple and multistage turbines.

Unit-III: VAPOUR POWER CYCLES

Basic Rankine cycle, with superheat, reheat and regeneration comparison with Carnot cycle

Unit-IV: AIR COMPRESSOR

Reciprocating compressors, Effect of clearance and volumetric efficiency. Adiabatic, Isothermal and Mechanical efficiencies, staging of reciprocating compressors, optimal stage pressure ratio, effect of intercooling, minimum work for multistage reciprocating compressors

Unit-V: REFRIGERATION

Vapor compression refrigeration system-description, Analysis Refrigerating effect -Power required, Unit of refrigeration, COP - Refrigerants and their desirable properties. Reversed Carnot cycle, Reversed Brayton cycle - Vapor absorption refrigeration system.

List of Experiments:

- 1. Port timing diagram
- 2. Valve timing diagram
- 3. Performance test on four stroke diesel engine
- 4. Performance test on single stage air compressor
- 5. Performance test on two stage air compressor
- 6. Determination of flash point and fire point using open cup apparatus
- 7. Determination of flash point and fire point using closed cup apparatus
- 8. Determination of viscosity using Saybolt viscometer.
- 9. Determination of viscosity using Redwood viscometer.

MEC19D202 · MANUEACTUD	L	Τ	Р	С					
WIECIORSU2: WANUFACIUR	3	0	0	3					
Due veguisites Nil	Course Category: Program Core Courses								
Pre-requisite: 1011	Course Type : Theory								

Course Objective(s):

To motivate and challenge students to understand and develop an appreciation of the processes in correlation with material properties which change the shape, size and form of the raw materials into the desirable product by conventional or unconventional manufacturing methods.

Course Outcome(s):

CO1	Contrast the casting process, to classify the various casting processes and to identify the various casting defects
CO2	Explain various welding, brazing and analyze the effect of thermal cutting process
CO3	Illustrate various bulk deformation processes and able to design bulk deformation components
CO4	Categorize the metal forming manufacturing processes
CO5	Judge the cutting tool to be chosen, to measure the tool life, to compare various machines for machining processes and to choose the working holding and tool holding devices for the machines and machining processes.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	3	2	2	3		1		2		1	1	2		3
CO2	3	3	2	2					1						
CO3	3	3	2	3	3			2	2		1	1	2		3
CO4	3	3	3	3				2	1		1	1			
CO5	3	3	3	3			2	1	1		1	2	2		

Course Topics: Unit-I: METAL CASTING PROCESS

Moulding sands - types and properties - patterns – types, selection of patterns, pattern allowances - design of patterns - classifications of castings according to mould materials and moulding methods- forces acting on the molding flasks -short & long freezing range alloys – solidification and cooling – riser and gating design – design considerations – special casting techniques - fettling and finishing of castings - defects in castings.

Unit-II: FABRICATION PROCESS

Classification of welding process - principle of gas welding - arc welding - resistance welding - solid state welding - thermo-chemical welding - radiant energy welding - brazing and soldering - Heat affected zones in welding, Methods to minimize HAZ- thermal cutting of metals or alloys.

Unit-III: BULK DEFORMATION PROCESSES

Forging - classification of forging processes, forging defects and inspection-Strain hardening, Recovery, Recrystallization and grain growth - rolling - classification of rolling processes, rolling mill, rolling of bars and shapes - extrusion - classification of extrusion processes, extrusion equipments

Unit-IV: FORMING PROCESS

Sheet metal forming - High velocity forming - explosive forming, electro hydraulic forming magnetic pulse forming - pneumatic - mechanical high velocity forming. Plastic forming - Plastics - types of plastics - plastic moulding processes, defects in plastics, Powder metallurgy- Introduction, Production of component.

Unit-V: MACHINING PROCESS

Mechanics of machining, single and multipoint cutting tool, tool - geometry, life and wear - Lathe - Capstan and Turret lathe - Drilling and Boring machine classification, principles of working - work holding and tool holding devices.

Text Book(s):

- 1. R.K.Jain, "Production Technology", Edition: 1, Khanna Publishersa, 2002.

MEC19D202 DESIGN OF MAG	L	Т	Р	С	
MECIONSUS : DESIGN OF MAC	3	0	0	3	
Pre-requisite: MEC18R271- Strength	Course Category: Program	Core C	Courses		
of Materials	Course Type : Theory				

Course Objective(s):

- To introduce students to the design and theory of common machine elements and to give students experience in solving design problems involving machine elements.
- To synergize forces, moments, torques, stress and strength information to develop ability to analyze, design and/or select machine elements with attention to safety, reliability, and societal and fiscal aspects.
- To require the student to prepare professional quality solutions and presentations to effectively communicate the results of analysis and design

Course Outcome(s):

CO1	Solve simple stresses in beams, hooks and shafts.
CO2	Design shafts, keys and couplings for power transmission.
CO3	Estimate load carrying capacity of threads and welds joints.
CO4	Select springs and levers for different applications.
CO5	Interpret the use of sliding and rolling contact bearings.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	2	2	2		1				1			3		1
CO2	3	3	3	2		1				2			3		1
CO3	3	2	3	2		1				2			3		1
CO4	3	2	3	2		1				2			3		1
CO5	3	2	2	1		1				2			3		1

Course Topics: Unit-I: SIMPLE STRESSES

Basics in Engineering Design – preferred numbers, fits and tolerances – Types of simple stresses – static and varying loading – combined loading – theories of failures – allowable stress – factor of safety – stress concentration factor – fluctuating stress- design for combined fatigue loading Soderberg, Goodman and Gerber relations.

Unit-II: DESIGN OF SHAFTS, KEYS AND COUPLINGS

Design principles of shafts - static, fatigue loading - critical speed. Design of keys. Design of couplings.

Unit-III: DESIGN OF TEMPORARY AND PERMANENT JOINTS

Welded joints: Types of welded joints- weld symbols, strength of welds- centrally loaded joints- axially loaded joints- eccentrically loaded joints. Threaded joints: I.S.O. Metric screw threads- treaded joints in tension-fluctuating load- torque requirement for tightening and eccentrically loaded bolted joints.

Unit-IV: DESIGN OF SPRINGS

Helical springs and leaf springs: Stresses and deflection in helical springs - Design of leaf springs- stress and deflection - exercise problems in springs used for automobiles

Unit-V: DESIGN OF BEARINGS

Sliding contact bearings: Theory of lubrication- hydrodynamic bearings-Sommer field number- design of hydrodynamic bearings. Rolling contact bearings: Static and dynamic load capacity- cubic mean load- variable load-probability of survival- selection of deep groove and angular contact ball bearings.

MEC19D251 . EINITE EI EMI	L	Τ	Р	С	
VIECIORSSI: FINITE ELEVI	2	0	2	3	
Pre-requisite: MEC18R271-Strength of	Course Category: Program	Core C	Courses		
Materials	Course Type : Theory with	h pract	ical		

Course Objective(s):

This course enables the students to virtually test and predict the behavior of mechanical structures in addition to solving complex engineering problems

Course Outcome(s):

CO1	Apply the knowledge of mathematics and finite element concept to solve engineering problems.
CO2	Recognize the basic principle of Finite Element Analysis in 1D structural and heat transfer application
CO3	Ability to solve 2-D structural and thermal problem using FEA.
CO4	Analyze the iso parametic element formulation using FEA
CO5	Evaluate the Vibration and Torsion of non-circular shafts.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	3	3	2	3				1	1			3		2
CO2	3	3	3	2	2				1	1			3		2
CO3	3	2	2	2	2				1	1			3		2
CO4	3	2	2	2	2				1	1			3		2
CO5	3	2	2	2	2				1	1			3		2

Course Topics: Unit-I: INTRODUCTION

Historical Background, Mathematical modeling of field problems in engineering, governing equations, discrete and continuous models, boundary and initial value problems, Weighted Residual Methods, Variational formulation of boundary value problems, Ritz technique, Basic concept of Finite Element Method.

Unit-II: ONE DIMENSIONAL PROBLEMS

One dimensional second order equation, discretization, linear and higher order elements, derivation of shape functions, Stiffness matrix and force vectors, assembly of elemental matrices, solution of problems from solid mechanics and heat transfer.

Unit-III: TWO DIMENSIONAL PROBLEMS

Two dimensional equations, variational formulation, finite element formulation, triangular elements- shape functions, elemental matrices and RHS vectors; application to thermal problems, Plane stresses and plane strain problems, body forces and thermal loads, plate and shell elements.

Unit-IV: ISOPARAMETRIC ELEMENTS FORMULATION

Natural coordinate systems, isoparametric elements and shape functions, numerical integration and application to plane stress problems, matrix solution techniques, solution of dynamic problems, and introduction to FE software.

Unit-V: VIBRATION AND TORSION PROBLEMS

Longitudinal vibration and mode shapes, fourth order beam equation, transverse deflections and natural frequencies, Torsion of non-circular shafts, quadrilateral and higher order elements

Practical Modules:

- 1. Stress analysis of a plate with a circular hole
- 2. Stress analysis of rectangular L bracket
- 3. Mode frequency analysis of a 2D component
- 4. Mode frequency analysis of beams (Cantilever, Simply supported, Fixed ends)
- 5. Stress analysis of beams (Cantilever, Simply supported, Fixed ends)

Text Book(s):

MEC19D272 HEAT AND M	L	Τ	Р	С					
WIECIORS/S: HEAT AND WIA	3	0	2	4					
Pro requisitor Nil	Course Category: Program Core Courses								
rre-requisite: Mil	Course Type : Integrated (Course							

Course Objective(s):

To evaluate various modes of heat transfer and design of heat exchangers and to enable students to do experimentation on heat transfer equipment's and enhance practical knowledge of various systems.

Course Outcome(s):

CO1	Apply basic principles of heat transfer for solving problems and demonstrate fundamentals principles of heat transfer in practice
CO2	Solve free and forced convection problems using correlations and perform experimentation
CO3	Analyse the performance of heat exchangers and demonstrate in practice.
CO4	Evaluate radiation problems using perform correlations and experimentation
CO5	Assess different mass transfer systems

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	2	3	2	1				2			2	3		
CO2	3	3	3	2	3				2			1	2	3	2
CO3	3	3	2	1	2				2			2	3	3	
CO4	3	2	2	2	2				2			3	3		
CO5	3	2		1					2			2	2		

Course Topics: Unit-I: CONDUCTION

Introduction to three modes of heat transfer, Derivation of heat balance equation- Steady one dimensional solution for conduction heat transfer in Cartesian, cylindrical and spherical geometry, concept of conduction and film resistances, critical insulation thickness, lumped system approximation and Biot number, heat transfer through pin fins- Two dimensional conduction solutions for both steady and unsteady heat transfer-approximate solution to unsteady conduction heat transfer by the use of Heissler charts

Unit-II: CONVECTION

Heat convection, basic equations, boundary layers- Forced convection, external and internal flows- Natural convective heat transfer-Dimensionless parameters for forced and free convection heat transfer-Correlations for forced and free convection- Approximate solutions to laminar boundary layer equations (momentum and energy) for both internal and external flow- Estimating heat transfer rates in laminar and turbulent flow situations using appropriate correlations for free and forced convection.

Unit-III: CONVECTIVE PHASE CHANGE HEAT TRANSFER AND HEAT EXCHANGERS

Condensation and boiling – boiling modes, correlations, forced convection boiling, laminar film condensation on a vertical plate, turbulent film condensation - heat exchangers – design procedure for heat exchanger-LMTD and NTU analysis, fouling factor, effectiveness

Unit-IV: RADIATION

Radiation – laws of radiation, black body radiation, shape factor, radiation exchange between black and gray surfaces, radiosity and irradiation, irradiation shields.

Unit-V: MASS TRANSFER

Mass transfer – Fick's law of diffusion, diffusion mass transfer, forced convective mass transfer, heat and mass transfer analogies.

List of Experiments:

- 1. Determination of thermal conductivity of insulating powder.
- 2. Determination of overall heat transfer coefficient using composite wall apparatus.
- 3. Determination of emissivity using emissivity apparatus.
- 4. Determination of heat transfer coefficient in natural convection mode.
- 5. Determination of heat transfer coefficient in natural and forced convection mode in pin-fin apparatus.
- 6. Determination of Stefan Boltzmann constant using test rig.
- 7. Determination of effectiveness of Parallel flow and counter flow heat exchanger.
- 8. Determination of heat transfer coefficient in forced convection mode.
- 9. Determination of thermal conductivity using Lagged Pipe apparatus

MEC18R374 : KINEMATICS A	L	Τ	Р	С					
MACHINES	3	0	2	4					
Pre-requisite: MEC18R211-	Core C	Courses							
Engineering Mechanics	Course Type : Integrated Course								

Course Objective(s):

To acquire the knowledge in basic of mechanics, cam profile, vibration and control mechanisms, balancing of machines

Course Outcome(s):

CO1	Apply the knowledge of simple mechanisms gained in real time applications by fabricating it.
CO2	Create and analyze the velocity and acceleration of various mechanisms by applying
	relative principle.
CO3	Design, develop and analyze profile of CAM for any applications
CO4	Apply the concept of balancing and use it for reducing the unbalanced forces in rotating
	masses and reciprocating engines.
CO5	Apply different damping methods to minimize vibrations and Calculating gyroscopic couple
	on various vehicles.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	3	3				2		2	2		1	3	2	
CO2	3	2	3						1	1		1	3	1	1
CO3	3	3	3				2		2	2		1	3	3	
CO4	3	2	2	2	2	1		1				1	3	1	1
CO5	3	3	3	1				1		2		1	3	1	

Course Topics:

Unit-I: BASICS OF MECHANISMS

Classification of mechanisms- Basic kinematic concepts and definitions- Degree of freedom, mobility-Grashof's law, Kinematic inversions of four bar chain and slider crank chains- Limit positions- Mechanical advantage- Transmission angle- Description of some common mechanisms- Quick return mechanism, straight line generators- Universal Joint- Rocker mechanisms

Unit-II: KINEMATICS

Displacement, velocity and acceleration analysis of simple mechanisms, graphical velocity analysis using instantaneous centers, kinematic analysis of simple mechanisms- slider crank mechanism dynamics Coincident points- Coriolis component of acceleration- introduction to linkage synthesis three position graphical synthesis for motion and path generation.

Unit-III: CAM PROFILES

Classification of cams and followers- Terminology and definitions- Displacement diagrams- Uniform velocity, parabolic, simple harmonic and cycloidal motions- derivatives of follower motions- specified contour camscircular and tangent cams- pressure angle and undercutting, sizing of cams, graphical and analytical disc cam profile synthesis for roller and flat face followers

Unit-IV: BALANCING OF MACHINES

Static and dynamic balancing - balancing of rotating masses - balancing a single cylinder engine, balancing of multi cylinder engines - partial balancing in locomotive engines - balancing linkages - balancing machines

Unit-V: VIBRATION AND CONTROL MECHANISM

Basic features of vibratory systems - Basic elements and lumping of parameters - Degrees of freedom - Single degree of freedom - Free vibration - Equations of motion - natural frequency - Types of Damping - Gyroscopes - Gyroscopic couple - Gyroscopic stabilization - Gyroscopic effects in aeroplanes and ships

List of Experiments:

- 1. Determination of Moment of Inertia by Oscillation
- 2. Determination of Speed and Sensitivity of a Porter Governor
- 3. Determination of Speed and Sensitivity of a Hardnell Governor.
- 4. Determination of Speed and Sensitivity of a Proell Governor.
- 5. Determination of Critical Speed of a Shaft using Whirling Apparatus.
- 6. Determination of Frequency of Transverse Vibration of a Free-Free Beam.
- 7. Determination of Natural Frequency of spring mass System Theoretically and Verify Experimentally.
- 8. Determination of Time Period for Oscillations of a Compound Pendulum.
- 9. Determination of the Natural frequency of Spring Mass System and Damping Factor its Coefficient (Multi Degree of Freedom).
- 10. Study of simple, compound and epicyclic gear trains.

MEC19D275 METAL CUTTIN	L	Τ	Р	С					
WIECIONS/S: WIETAL CUTTIN	3	0	2	4					
Due veguisites Nil	Course Category: Program Core Courses								
Pre-requisite: 1011	Course Type : Integrated Course								

Course Objective(s):

To understand the basic concepts of cutting mechanism used in manufacturing Industry and Tools used for production Technology and the measurements of various measuring instruments and methods

Course Outcome(s):

CO1	Illustrate the nomenclature of single and multipoint cutting tools
CO2	Describe the importance of the machinability index and economic machining
CO3	Summarize the various types of jigs and fixtures and their usage and application in related machines
CO4	Evaluate the performance of linear and angular measuring instruments
CO5	Enumerate the assembly practices and various materials handlings Devices used in industries

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	2	1		1			1				1	3	3	
CO2	3	2	1	1	1			1				1	3	1	
CO3	3	2	2	1				1				1	3	2	
CO4	3	2		1	2			1				1	3	3	
CO5	3	2	1	2				2				1	3	2	

Course Topics: Unit-I: INTRODUCTION

Geometry of cutting tools and tool nomenclature - single point and multiple point cutting tools and used for turning – milling - drilling and broaching - cutting tool materials and their properties - grinding wheels and their selections.

Unit-II: MACHINABILITY

Machinability - variables affecting machinability - machinability index - economics of machining - selection of optimal machining conditions - productivity of machine tools

Unit-III: JIGS AND FIXTURE

Tooling for conventional and non-conventional machining processes: Mould and die design, Press tools, Cutting tools; Holding tools: Jigs and fixtures, principles, applications and design; press tools – configuration, design of die and punch; principles of forging die design.

Unit-IV: METROLOGY AND MEASUREMENTS

Metrology: Dimensions, forms and surface measurements, Limits, fits and tolerances; linear and angular measurements; comparators; gauge design; interferometry; Metrology in tool wear and part quality including surface integrity, alignment and testing methods; tolerance analysis in manufacturing and assembly. Process metrology for emerging machining processes such as micro-scale machining, Inspection and work piece quality.

Unit-V: ASSEMBLY AND MATERIAL HANDLING
Assembly practices: Manufacturing and assembly, process planning, selective assembly, Material handling and devices.

List of Experiments:

- 1. Taper turning and external thread cutting using lathe
- 2. Contour milling using vertical milling machine
- 3. Spur gear cutting in milling machine
- 4. Surface grinding
- 5. V-tool/parting tool grinding
- 6. Cylinder grinding
- 7. Use of Tool Maker's Microscope
- 8. Sine bar and comparators
- 9. Surface finish measurement equipment
- 10. Bore diameter measurement using micrometer
- 11. Use of Autocollimator
- 12. Gear inspection using profile projector

re-requisite: Mil	Course Type : Theory								

Course Objective(s):

1. To understand the importance of automation in the of field machine tool based manufacturing

2. To get the knowledge of various elements of manufacturing automation – CAD/CAM, sensors, pneumatics, hydraulics and CNC

3. To understand the basics of product design and the role of manufacturing automation

Course Outcome(s):

CO1	Explain the concepts of automation in the field of machine tool based manufacturing
CO2	Outline the basic fundamentals of CAD software
CO3	Apply the knowledge in computer aided manufacturing and CNC technology
CO4	Interpret the various strategies in low cost automation.
CO5	Contrast the basics of product design towards industrial application.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	2	2		2						1		3		
CO2	3			2	2						1	2	3		3
CO3				2								2	3		
CO4	3	2		2	2	2					1	2	3		
CO5		2	2		3	2									

Course Topics:

Unit-I: INTRODUCTION TO AUTOMATION

Introduction: Why automation, Current trends, CAD, CAM, CIM; Rigid automation: Part handling, Machine tools. Flexible automation: Computer control of Machine Tools and Machining Centers, NC and NC part programming, Unigraphics, Solid works.

Unit-II: COMPUTER AIDED DESIGN

Computer Aided Design: Fundamentals of CAD - Hardware in CAD-Computer Graphics Software and Data Base, Geometric modeling for downstream applications and analysis methods.

Unit-III: COMPUTER AIDED MANUFACTURING

Computer Aided Manufacturing: CNC technology, PLC, Micro-controllers, CNC- Adaptive Control, Automated Material handling, Automated Guided Vehicles (AVG), Group Technology (GT), Computer Aided Process Planning (CAPP).

Unit-IV: LOW COST AUTOMATION

Low cost automation: Mechanical & Electro mechanical Systems, Pneumatics and Hydraulics, Illustrative Examples and case studies.

Unit-V: INTRODUCTION TO MODELING AND SIMULATION

Introduction to Modeling and Simulation: Product design, process route modeling, Optimization techniques, Case studies & industrial applications.

MEC18R482 : MACHINE DRAV	L	Τ	Р	С					
LABORATOR	1	0	3	2					
Due noguicites Nil	Course Category: Program Core Courses								
re-requisite: Mil									

Course Objective(s):

To enable the students about modelling and assembly of machine components

Course Outcome(s):

CO1	Demonstrate various drawing conventions, abbreviations and their usage
CO2	Apply the knowledge of dimensioning, fits and tolerance in industrial sectors
CO3	Draw various sectional views of any machine element
CO4	Understand the connecting principles of joints and bearings
CO5	Combine the various drawn parts of the component into assembled view

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	1	2	3						1	3			2		1
CO2	3	1	3		1				3	3		1	3	1	2
CO3	3	1	3		1				3	3			3		2
CO4	3	1	3		1				3	3			3	1	2
CO5	3	1	3		1				3	3			3	1	3

Experiments:

I. Machine Drawing Conventions:

- a. Need for drawing conventions Introduction to IS conventions
- b. Title boxes, their size, location and details common abbreviations & their liberal usage
- c. Conventional representation of materials, common machine elements and parts such as screws, nuts, bolts, keys, gears, webs, ribs.
- d. Types of sections selection of section planes and drawing of sections and auxiliary sectional views. Parts not usually sectioned.
- e. Methods of dimensioning, general rules for sizes and placement of dimensions for holes, centres, curved and tapered features.
- f. Fits and tolerance allocation of fits for various mating parts tolerance data sheet tolerance table preparation Geometric tolerance
- g. Types of Drawings working drawings for machine parts.

II. Drawing of Machine Elements and simple parts

Selection of Views, additional views for the following machine elements and parts with every drawing proportion.

- a. Popular forms of Screw threads, bolts, nuts, stud bolts, tap bolts, set screws.
- b. Keys, cottered joints and knuckle joint
- c. Rivetted joints for plates
- d. Shaft coupling, spigot and socket pipe joint
- e. Journal, pivot and collar and foot step bearings

III. Assembly Drawings

Drawings of assembled views for the part drawings of the following using conventions and easy drawing proportions.

a) Engine parts – stuffing boxes, cross heads, Eccentrics, Petrol Engine connecting rod, piston assembly.

- b) Other machine parts Screws jacks, Machine Vices Plummer block, Tailstock
- c) Valves : Steam stop valve, spring loaded safety valve & feed check valve

NOTE: First angle projection to be adopted.

- 1. Machine Drawing R.K Dhawan, S.Chand Publications, 1998.
- 2. Machine Drawing –K.L.Narayana, P.Kannaiah & K. Venkata Reddy, New Age International Publishers, 2007.

MAJOR ELECTIVE -MANUFACTURING STREAM

MEC18R311 : NON-TRADITIO	L	Τ	Р	С					
TECHNIQUES	3	0	0	3					
Bue neguicite. Nil	Course Category: Major Elective								
re-requisite: Mil	Course Type : Theory								

Course Objective(s):

The machining principles and processes in the manufacturing of precision components and products that use in unconventional manufacturing environment. Basic understandings of the machining capabilities of the processes, advantages, disadvantages

Course Outcome(s):

CO1	Outline the importance and list of advanced machining techniques and suitability of
COI	mechanical energy based advanced machining process for the different materials.
CO2	Select the appropriate electrochemical machining process for the various materials.
CO3	Analyze the electrical energy based process for making complex profile in hard metals
CO4	Illustrate the Laser, Electron, Plasma and Ion beam machining processes, based on the
04	accuracy of the end product can choose the best machining process.
CO5	Apply the basic knowledge in micro-machining and Nano-machining processes and
05	hybridization of non-conventional machining processes.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	2	2		2	2				2		2	2	2	1
CO2	2	2	2	1	2	2				2		2	2	2	2
CO3	2	2	2	1	3		1			2		2	2	2	
CO4	2	2			3		2			1		2	2	2	2
CO5	3	2	2		3	2						2	2		2

Course Topics:

Unit-I: MECHANICAL ENERGY BASED MACHINING

Overview, need, classification of non-conventional machining processes –Abrasive water jet machiningultrasonic machining - principle, machining unit, tool materials, tool size, process characteristics, advantages, limitations, applications. Abrasive flow machining - introduction, principle, equipment, process details, advantages, limitations, and applications.

Unit-II: ELECTRO CHEMICAL MACHINING

Electro-chemical machining - introduction, principle, elements, machine, chemistry of process, metal removal rate, tool design, accuracy, surface finish, economics, advantages, limitations, applications - electrochemical grinding - electrochemical deburring, electrochemical honing, shaped tube electrolyte machining - chemical machining - introduction, advantages, limitations, applications

Unit-III: ELECTRO THERMAL BASED MACHINING

Electrical Discharge Machining - introduction, principle, machine dielectric fluid, spark erosion generators, EDM tools, electrode holders, tool design, flushing, process characteristics, applications, electrical discharge grinding, wire cut EDM.

Unit-IV: THERMAL PROCESS

Plasma Arc Machining - introduction, principle, plasma, non-thermal generation of plasma, mechanism of metal removal, PAM parameters, equipment, safety precautions, advantages, limitations, applications - Electron

Beam Machining, laser beam machining, Ion Beam Machining - introduction, principle, equipment, parameters, characteristics, types of lasers.

Unit-V: HYBRID MACHINING

Hybridization of non-conventional processes and micro and nano-manufacturing ECDG, overview of micro and nano-manufacturing and applications.

PRACTICAL COMPONENT (NOT FOR EXAMINATION)

Demo on operation of Electrical Discharge machining (EDM) and Abrasive water jet machining (AWJM).

MEC19D216 . THEODV OF M	L	Τ	Р	С	
WIECIORSIO: THEORI OF WI	3	1	0	4	
Pre-requisite: MEC18R375- Metal	Course Category: Major E	lective			
Cutting Technology					

Course Objective(s):

To provide knowledge about the basics of metal cutting, chip formation and its Mechanism.

To understand the nomenclature of single point and multi point cutting tool.

To provide depth knowledge on various micromachining processes and also briefs the importance of machining economics.

Course Outcome(s):

CO1	Describes the basic mechanism of metal cutting and chip formation.
CO2	Summarize the different aspects of single point cutting tools and their selection procedure.
CO3	Demonstrate the nomenclature and selection of multi point cutting tool.
CO4	Illustrate the concepts of micromachining process.
CO5	Analyze the concepts acquired to determine the machining time and product cost.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	1				1			1			1	1	2	
CO2	3	3	1						1			1	3	3	
CO3	3	3	1						1			1	3	3	
CO4	3	2	2		2			1	1			1	2	2	
CO5	2	1			3				1			1	2	2	

Course Topics: Unit-I: INTRODUCTION

Theory of metal cutting- chip formation- Types of chips-chip breaker-orthogonal Vs oblique cutting - specific cutting energy - shear angle - theory of Merchant, Lee and Shaffer - friction in metal cutting - temperatures in metal cutting - measurement of cutting temperature- Cutting fluids. Demo on Measurement of cutting temperature using thermal image analyzer.

Unit-II: SINGLE POINT CUTTING TOOLS

Cutting tool material, properties, insert and coated tools, tool wear, tool life - single point cutting tool nomenclature, type and styles- design and manufacture of tools - HSS and carbides-brazed and clamped insert tools for turning, boring, shaping operations

Unit-III: MULTIPOINT CUTTERS

Multi-point cutters- nomenclature, classification and selection, construction methods, cutter setting, design and manufacture of drills, reamers, taps, milling cutters, grinding wheel specification, lapping ,dressing and truing.

Unit-IV: MICROMACHINING AND CHATTER IN MACHINING

Theory of micromachining – chip formation - surface finish – Size effect in micromachining – microturning, microdrilling, microdrilling - tool design. Chatter in machining-factors effecting chatter in machining-types of chatter-mechanism of chatter.

Unit-V: ECONOMICS OF MACHINING

Introduction to economics of machining, Machining Time- Estimation of machining time in different machining operations, estimation of cost and optimum cutting conditions.

MEC19D225 · WEI DINC T	L	Τ	Р	С				
WIECIOR525: WELDING I	3	0	0	3				
Pre-requisite: MEC18R208 - Material	Pre-requisite: MEC18R208 - Material Course Category: Major El							
Science	Course Type : Theory							

Course Objective(s):

The aim of this course is to develop knowledge on joining process and skill to select processes based on materials.

Course Outcome(s):

CO1	Select the appropriate welding processes and equipments to use in metal fabrication
CO2	Design a suitable equipment for heat transfer applications in welding
CO3	Identify the heat input and temperature distribution across a welded structure based on weld geometry
CO4	Evaluate the causes of defects in welding of ferrous metals
CO5	Interpret the microstructures of welds, defects and remedies for a wide range in non- ferrous alloys

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	2					1						2		
CO2	3	3	2	2			2						3	1	
CO3	3		2					1				1	2	1	
CO4	3		2					1				1	2	1	
CO5	3	2	2									1	2	1	

Course Topics:

Unit-I: WELDING PROCESS AND EQUIPMENT'S

Welding processes and grouping, welding nomenclatures. Equipment's, parameter controls, Electrode specification and filler metals. Special welding process - Resistance welding, high energy density welding, Thermit welding, and solid state welding

Unit-II: HEAT FLOW IN WELDING

Heat transfer in weldments, dissipation of welding heat, cooling rates and weld metal cooling curves. Calculation of HAZ width, solidification rate and effects of heat input.

Unit-III: WELDING METALLURGY

Weld solidification, phase transformation in weldments, strengthening due to welding. Microstructures of HAZ, PMZ, and fusion line. Weld cracking, residual stresses and distortion. Use of constitution diagram (Schaffler, Delong, and WRC 92).

Unit-IV: WELDING OF FERROUS MATERIALS

Welding of Stainless steels, and cast irons – Welding procedure qualification, Microstructures of weldments, electrode and filler material selection, defects and remedies, weldment properties, microstructure and defects

Unit-V: WELDING OF NON FERROUS MATERIALS

Welding of Aluminium, Nickel, and Titanium alloys - Welding procedure qualification, Microstructures of weldments, electrode and filler material selection, defects and remedies

Text Book(s):

MEC18R335 : RECENT TREN	L	Τ	Р	С			
TECHNIQUE	3	0	0	3			
Pre-requisite: MEC18R208- Material	Pre-requisite: MEC18R208- Material Course Category: Major El						
Science							

Course Objective(s):

The aim of undergoing this course is to develop knowledge on the trends and techniques in the welding processes

Course Outcome(s):

CO1	Classify the different welding process, its heat sources and shielding methods.
CO 2	Outline the concepts and applications of various types of pressure welding and resistance
02	welding
CO3	Identify the advanced welding technique to use in metal fabrication.
CO4	Explain the concepts, various operating procedures and applications of soldering and
04	brazing.
CO5	Analyze the solidification behavior and structure of weld zone with the welding parameters

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	2	1										2		
CO2	2	1	1										2		
CO3	2	1	1										2	2	
CO4	2	1	1										2		
CO5	2	3	1										1		

Course Topics: Unit-I: FUSION WELDING

Classification of welding processes- heat sources and shielding methods –fusion welding processes- oxy - acetylene welding, arc welding processes, electroslag and electrogas welding

Unit-II: PRESSURE WELDING AND RESISTANCE WELDING

Cold and hot pressure welding, friction, Solid state welding - friction stir, ultrasonic, induction pressure, explosive and diffusion welding, Principles of resistance welding, Spot welding and Seam welding- cold metal transfer welding.

Unit-III: NEWER WELDING TECHNIQUES

Electron beam, plasma arc and laser beam welding principles, advantages, limitations and applications of the electron beam, plasma arc and laser beam welding processes, Welding Symbols.

Unit-IV: SOLDERING AND BRAZING

Soldering- soldering materials, applications of soldering- brazing, filler materials and fluxes, Visual and Oral inspecting procedures.

Unit-V: WELDING METALLURGY

Weld thermal cycles and their effects- structural changes in different materials- effects of pre and post heat treatments- concept of weldability and its assessment - Welding of different materials- defects in welds, their causes and remedies

MEC18R336 : MECHANICAL	L	Τ	Р	С		
MATERIALS	3	0	0	3		
Pre-requisite: MEC18R208- Materials	Pre-requisite: MEC18R208- Materials Course Category: Major El					
Science						

Course Objective(s):

The central theme of this course is the mechanical behaviour of engineering materials, such as metals, ceramics, polymers, and composites. The main objectives are to provide students with basic understanding of mechanical properties and testing of the materials and find out the suitability of the materials for different applications.

Course Outcome(s):

CO1	Illustrate the elastic/plastic deformation and failure criteria
CO2	Apply dislocation theories for work hardening and strengthening mechanism
CO3	Outline the basic concepts involved in fatigue.
CO4	Dissect the behavior of material upon creep testing.
CO5	Examine the torsion testing of materials and understand the types of torsion failures.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	2	2	2								2	3	2	
CO2	3	1	1	1	1							2	2	1	1
CO3	3	2	2	2								2	1	2	
CO4	3	2	1	2								2	2	3	
CO5	3	2	2	2								1	2	2	

Course Topics: Unit-I: DEFORMATION

Elastic and plastic deformation -Stress-strain relationship, plastic deformation of metallic materials - Mohr's circle - Yielding criterion - Von Mises and maximum shear stress, tresca yielding criterion Failure criteria under combined stresses

Unit-II: THEORY OF PLASTICITY

Elements of theory of plasticity - dislocation theory, properties of dislocation, stress fields around dislocations, elementary dislocation interactions - application of dislocation theory to work hardening and strengthening mechanisms.

Unit-III: FATIGUE OF STRUCTURES

S.N. curves – Endurance limits – Effect of mean stress, Goodman, Gerber and Soderberg relations and diagrams – Notches and stress concentrations – Neuber's stress concentration factors – Plastic stress concentration factors – Notched S.N. curves – Fatigue of composite materials.

Unit-IV: CREEP

Creep- importance in materials engineering – primary mechanisms of creep deformation – design options to minimize creep deformation – stress rupture & stress relaxation tests, development of creep resistant alloys, prediction of long time properties.

Unit-V: TORSION

Introduction - mechanical properties in torsion, torsional stresses for large plastic strains- types of torsion failures - torsion test vs. tension test - hot torsion testing.

Text Book(s):

MEC18R337 : MANUFACTURI	L	Τ	Р	С					
SIMULATION	3	0	0	3					
Due noguicites Nil	Course Category: Major Elective								
re-requisite: Mil	Course Type : Theory								

Course Objective(s):

To involve in integrated approach for the design of complex engineering systems To provide knowledge of statistical techniques for engineering application

Course Outcome(s):

CO1	Demonstrate a range of approaches in computer modelling and simulation.
CO2	Make use of different techniques of random number generation for diverse conditions.
CO3	Select a suitable technique of random variable generation for a specific problem.
CO4	Adapt appropriate distribution and evaluation methodology for simulation models
CO5	Identify apposite discrete event simulation concepts for a range of mechanical problems.

Mapping of Course Outcome(s):

-															
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	3		1	3	1		1					2		
CO2	3	3	2	2	1								2	2	
CO3	3	3	2	2	1								3	3	2
CO4	3	3	2	3	1	1		3					3	3	3
CO5	1	3	2	2	3	2		2				2	2	3	2

Course Topics:

Unit-I: COMPUTER MODELING AND SIMULATION SYSTEMS

Monte carlo simulation-nature of computer modelling and simulation - limitations of simulation, areas of application - components of a system - discrete and continuous systems. models of a system - a variety of modeling approaches-simulation languages arena and awesim

Unit-II: RANDOM NUMBER GENERATION

Techniques for generating random numbers - mid square method-the mid product method-constant multiplier technique - additive congruential method - linear congruential method-tests for random numbers-the Kolmogorov-Smirnov test-the Chi-Square test.

Unit-III: RANDOM VARIABLE GENERATION

Inverse transform technique-exponential distribution-uniform distribution - Weibull distribution - emprical continuous distribution - generate approximate normal variates - Erlang distribution-basics of SPSS.

Unit-IV: DISTRIBUTION AND EVALUATION OF EXPERIMENTS

Discrete uniform distribution - poisson distribution - geometric distribution - acceptance rejection technique for poisson distribution - gamma distribution - simulation experiments - variance reduction techniques - antithetic variables - verification and validation of simulation models.

Unit-V: DISCRETE EVENT SIMULATION

Concepts in discrete event simulation, manual simulation using event scheduling, single channel queue, two server queue simulation of inventory problems - programming for discrete event systems in GPSS-Case studies.

Text Book(s):

- 1. Jerry Banks and John S Carson, "Discrete Event System Simulation", Edition: 5, Prentice Hall Inc, New Delhi , 2017.

MEC18D220 • TOOLING FOI	L	Τ	Р	С					
MIECIOR559: TOOLING FOR	MEC18K339 : IOULING FOR PRODUCTION								
Pro requisitor Nil	Course Category: Major Elective								
rre-requisite: Mil	Course Type : Theory								

Course Objective(s):

To understand the basic concepts of machining mechanism used in manufacturing Industry and Tools used for production Technology

Course Outcome(s):

CO1	Illustrate the nomenclature of single and multipoint cutting tools.
CO2	Examine the factors affecting the machinability and machining economics.
CO3	Appraise the suitable tool pertaining to an application based on the tool life and machining
COS	parameters.
CO4	Make use of the design principles of jigs and fixtures for its usage in specific applications.
COF	Identify the types of presses for a variety of sheet metal operations based on the selection and
05	design factors.

Mapping of Course Outcome(s):

						1.1									
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	2			2		1							1	
CO2	2	2			3		2	1							
CO3	1	3		1	2					1	2		1	2	
CO4		2	2		2			2					2		
CO5	1	2	2	2	1			1					1	1	

Course Topics: Unit-I: CUTTING TOOLS

Geometry of cutting tools and tool nomenclature - single point and multiple point cutting tools and used for turning – milling - drilling and broaching - cutting tool materials and their properties - grinding wheels and their selections

Unit-II: MACHINABILITY

machinability - variables affecting machinability - machinability index - economics of machining - selection of optimal machining conditions - productivity of machine tools

Unit-III: TOOL LIFE

Tool wear and tool life- Types of tool wear, Factors affecting tool life tool life equations - tool life specification and criteria - tool life testing -effect of machining parameters on tool life.

Unit-IV: JIGS AND FIXTURES

Basic principle - elements of jigs and fixtures - location and clamping - 3-2-1 method of location-principles of pin location - radial location - V-location - cavity location - types of clamps - strap - cam - screw - latch – wedge and toggle clamps - hydraulic and pneumatic clamps - design considerations common to jigs and fixtures - drill jigs – leaf – box - plate and indexing jigs - milling fixtures.

Unit-V: PRESS WORKING

Different types of presses - principles of operation and selection - computation of capacities and tonnage requirements - shear action in die cutting operations - blanking and piercing - clearances - die block design -

punch dimensions- punch support - stops and strippers - calculation of blank size and press tonnage for drawing.

Text Book(s):

MEC18D340 · COMDOSITE	L	Τ	Р	С	
WIECION340 : CONFOSITI		3	1	0	4
Pre-requisite: MEC18R208-Materials	Course Category: Major E	lective			
Science	Course Type : Theory				

Course Objective(s):

To understand the basic principle of composite materials with some of the fabrication process ,testing and failure analysis of composite materials applications.

Course Outcome(s):

CO1	Define the composite materials over conventional materials and its applications.
CO2	Interpret the differences in the laminate processes and its corresponding effect on
02	performance of the composite materials.
CO3	Make use of major manufacturing processes and to study the quality of the products.
CO4	Classify the various mechanical properties and appropriate test methods used incomposites
CU4	materials.
CO5	Examine the failure modes of the composites laminates and with Finite Element Method to
05	analysis the failure.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	2	3	2	2			2		2		3	2	3	
CO2	3	3	2	1	2	2	1	2				2	2	3	1

CO4	2	1	2	1	3	1				2		1	3	2	2
CO5	3	2	2	2	1	2	1	2		1		3	2	1	3

Course Topics:

Unit-I: INTRODUCTION TO COMPOSITE

Definition and applications of composite materials, Fibers- glass, carbon, ceramic and aramid fibers; Matricespolymer, graphite, ceramic and metal matrices; characteristics of fibers and matrices. Lamina- assumptions, macroscopic viewpoint, generalized Hooke's law, reduction of homogeneous orthotropic lamina, isotropic limit case, orthotropic stiffness matrix, commercial material properties, rule of mixtures, transformation matrix, transformed stiffness.

Unit-II: LAMINATE PROCESSES

Basic assumptions of laminated anisotropic plates, symmetric laminates, angle ply laminates, cross ply laminates, laminate structural moduli, evaluation of lamina properties, determination of lamina stresses, maximum stress and strain criteria, von Mises Yield criterion for isotropic materials, generalized Hill's criterion for anisotropic materials, TsaiHill's criterion for composites, prediction of laminate failure, thermal analysis of composite laminates.

Unit-III: FABRICATION PROCESSES

Fundamentals - bag moulding - compression moulding, pultrusion-filament winding - other manufacturing process - quality inspection and non-destructive testing.

Unit-IV: TESTING OF COMPOSITES

Introduction to micro-mechanics-unidirectional lamina - laminates – inter-laminar stresses - static mechanical properties - fatigue properties - impact properties - environmental effects - fracture mechanics and toughening mechanisms, damage prediction, failure modes.

Unit-V: FAILURE PREDICTIONS

Failure predictions - design considerations - joint design - codes - design examples - optimization of laminated composites - application of FEM for design and analysis of laminated composites.

MEC18R343 : HEAT TREATME	L	Τ	Р	С	
TREATING	3	1	0	4	
Pre-requisite: MEC18R208-Materials	lective				
Science	Course Type : Theory				

Course Objective(s):

The aim of this course is to understand the topics of heat treatment process and function of furnace along materials nature of ferrous and non-ferrous materials.

Course Outcome(s):

CO1	Outline the knowledge on heat treatment and its phase transformations.
CO2	Explain the heat treatment process for different ferrous alloy.
CO3	Illustrate the heat treatment process for different nonferrous alloy.
CO4	Explain the various surface and special treatment processes.
CO5	Apply the heat treatment process for engineering components.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	1												1		
CO2	1	1	1										2	2	
CO3	2	1	1										2	2	
CO4	2	3	2										3	2	
CO5	3	3	2										3	3	

Course Topics:

Unit-I: HEAT TREATMENT ATMOSPHERE AND PRINCIPLES

Furnaces and heat treatment atmosphere, quenching media, fixtures, temperature measurements and controllers. Phase transformations – Austenitic, Pearlitic, bainitic, martensitic transformations.

Unit-II: HEAT TREATMENT OF FERROUS ALLOYS

Heat treatment of steels - stainless steels, Tool steels, Maraging steels, HSLA steels, and cast irons - processes, heat treatment defects, causes, remedies, inspections and quality control.

Unit-III: HEAT TREATMENT OF NON FERROUS ALLOYS

Heat treating of Aluminium, copper, nickel, titanium and magnesium alloys – processes, heat treatment defects, causes, remedies, inspections and quality control

Unit-IV: SURFACE AND SPECIAL TREATMENT

Ferritc nitro carburizing, Laser refractive surgery., PVD and CVD process, sputter coating, ion plating, electron beam and laser beam hardening, ion implantation, spray coatings, thermo-mechanical treatments – mechanisms, structural changes, and property relations.

Unit-V: HEAT TREATMENT OF ENGINEERED COMPONENTS

Heat treatment of wrought steel components – auto body sheets, plates, bars, and shafts. Heat treatment of cast and forged steel components – gears, couplings, and valves - Heat treatment procedure qualification.

Text Book(s):

1. T. V. Rajan and C. P. Sharma, "*Heat treatment-Principles and Techniques*", Edition: 2, PHI Learning Pvt Ltd , 2011.

MEC19D421 - NON DESTDUCTIO	L	Τ	Р	С			
MIEC10R421: NON DESTRUCTI	MEC18R421 : NON DESTRUCTIVE EXAMINATION						
Pre-requisite: MEC18R302-	lective						
Manufacturing Processes	Course Type : Theory						

Course Objective(s):

By the end of this course the participants will be familiar with a wide variety of Non-destructive testing techniques applicable to Design, Manufacturing and Industrial domains. The participants will be able to know how each technique works, how they can apply it, when and where it can be used and each technique's capabilities and limitations.

Course Outcome(s):

CO1	Connect the usage of Non-Destructive Examination in minimizing the cost over preferring
CO2	Illustrate the principles of operation of liquid penetrant and magnetic particle tests.
CO3	Identify the method of finding internal defects and other properties through radiography
005	techniques.
CO4	Examine the application of ultrasonic and acoustic emission techniques in a real time
004	environment.
CO5	Illustrate the advancements in nondestructive testing methods and equipment's.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	2		2		1		1					3	2	
CO2	3	2				2	2	3	1			1	3	2	
CO3	3	2	2	1		3	2	3	1			2	3	3	
CO4	3	2	2			2	1	3	1			1	3	2	
CO5	3	3	3	3		2	1	3	1	1		1	3	3	

Course Topics:

Unit-I: INTRODUCTION NON-DESTRUCTIVE TESTING AND LIQUID PENETRANT

Basic Principles of non-destructive testing – technical backgrounds – destructive and non-destructive testing comparisons-statistical measures and tools - process capability - theory of probability - sampling - ABC standard- Characteristics of liquid penetrants - different washable systems - developers - applications

Unit-II: MAGNETIC PARTICLE TESTS

Methods of production of magnetic fields - principles of operation of magnetic particle test - applications - advantages and limitations-Eddy current testing

Unit-III: RADIO GRAPH

Sources of ray - X-ray production - properties of X-rays - film characteristics - exposure charts - contrasts - operational characteristics of X-ray equipment - applications.

Unit-IV: ULTRASONIC AND ACOUSTIC EMISSION TECHNIQUES

Production of ultrasonic waves - different types of waves - general characteristics of waves - pulse echo method - A, B, C scans - principles of acoustic emission techniques - advantages and limitations - instrumentation - applications

Unit-V: ADVANCES IN NDT AND EQUIPMENTS

Inspection management - conventional non destructive testing - pre and post weld - heat treatment - pressure testing - vessel inspection - sub-sea inspection - long range ultrasonics - tube inspection- personnel resourcing ultrasonic immersion inspection systems - analytical equipment - lab scanners, profilometers, gas analyzers and leak detectors - industrial X-ray systems, exposure cabinets, X-ray tubes - magnetic particle and fluorescent penetrant inspection - optical inspection systems - mass spectrometers - UV inspection – Thermography-Principles-Phased array UT technique.

MEC19D421 MICDO MAN	L	Т	Р	С	
MECIOR451 : MICKO MAN	UFACIUKING	3	1	0	4
Pre-requisite: MEC18R375-	Course Category: Major E	lective			
Manufacturing Technology	Course Type : Theory				

Course Objective(s):

To understand the micro level machining processes and their applications.

Course Outcome(s):

CO1	Associate various mechanical energy based micro machining processes
CO2	Describe various beam energy based micro machining processes.
CO3	Illustrate various Nano level finishing processes and associated practices.
CO4	Infer micro level process for welding and forming of materials.
CO5	Implement various micro machining process for development and inspection of the
05	mechanical components.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	2		2									3	2	2
CO2	3	2		2									3	2	2
CO3	3	2			2							1	3	2	
CO4	3	1		2								1	2	2	
CO5	3	2	3	2		2	2					1	3	3	3

Course Topics:

Unit-I: MICRO MACHINING I

Mechanical Micro machining – Ultra Sonic Micro Machining – Abrasive Jet Micro Machining – Water Jet Machining – Abrasive Water Jet Micro Machining – Micro turning – Chemical and Electrical Chemical Micro Machining – Electrical discharge micro machining.

Unit-II: MICRO MACHINING II

Beam Energy based micro machining – Electron Beam Micro Machining – Laser Beam Micro Machining – Laser Beam Micro Machining – Electric Discharge Micro Machining – Ion Beam Micro Machining – Plasma Beam Micro Machining –Hybrid Micro machining – Electro Discharge Grinding – Electro Chemical spark micro machining – Electrolytic in process Dressing.

Unit-III: NANO POLISHING

Abrasive Flow finishing – Magnetic Abrasive Finishing – Magneto rheological finishing – Magneto Rheological abrasive flow finishing – Magnetic Float polishing – Elastic Emission Machining – chemo mechanical Polishing.

Unit-IV: MICRO FORMING AND WELDING

Micro extrusion – Micro and Nano structural development by Nano Plastic forming and Roller Imprinting – Micro bending with LASER – LASER micro welding – Electron beam for micro welding

Unit-V: RECENT TRENDS AND APPLICATIONS

Metrology for micro machined components – Ductile regime machining – AE based tool wear compensation – Machining of Micro gear, micro nozzle, micro pins – Application.

MAJOR ELECTIVE - **DESIGN** STREAM

MEC19D206.COMDUTED A	L	Τ	Р	С	
MECIORSUU; COMIFUTER A	3	0	0	3	
Pre-requisite:MEC18R151-	Course Category: Major Ele	ective			
Engineering graphics & design	Course Type : Theory				

Course Objective(s):

The aim of undergoing this course is to impart knowledge on computer graphics which are used routinely in diverse areas as science, engineering, etc..

Course Outcome(s):

CO1	Analyze of the fundamental of the computer graphics.
CO2	Explain the main curve representations and determine their differential properties.
CO3	Construct parametric and feature models of solid models.
CO4	Interpret picture data fed into a computer and for creating pictures from difficult
04	multidimensional data sets.
CO5	Apply assembly models and fits.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	1	3	1	2					1	1		2	1	2
CO2	3	1	3	2	2					1	1		2	1	2
CO3	3	1	3	2	2					1	1	2	2	1	2
CO4	3	2	3	3	3					1	1	2	2	1	2
CO5	3	2	3	2	3					1	1	2	2	1	2

Course Topics:

Unit-I:INTRODUCTION TO COMPUTER GRAPHICS FUNDAMENTALS

Fundamentals of Computer Graphics- Product cycle, sequential and concurrent engineering, Computer Aided Design, Outputs primitives (points, lines, curves etc.,), 2-D & 3-D transformation (Translation, scaling, rotators) windowing – view ports – clipping transformation.

Unit-II: CURVES AND SURFACES MODELLING

Introduction to curves, Geometric Modeling – Analytical curves: line, circle and conics –synthetic curves: Hermite cubic spline- Bezier curve and B-Spline curve – curve manipulations. Introduction to surfaces – Analytical surfaces: Plane surface, ruled surface, surface of revolution and tabulated cylinder – synthetic surfaces: Hermite bicubic surface – Bezier surface and B-Spline surface- surface manipulations.

Unit-III:NURBS AND SOLID MODELING

Basics-curves, linear, areas, circle and bi linear surface. Regularized Boolean set operations – primitive instancing – sweep representations – boundary representations – constructive solid Geometry – comparison of representations – user interface for solid modeling.

Unit-IV:VISUAL REALISM

Hidden – Line – Surface – solid removal algorithms shading – coloring, computer animation. Introduction to parametric and variation geometry based software's and their principles creation of prismatic and lofted parts using these packages.

Unit-V:ASSEMBLY OF PARTS AND PRODUCT DATA EXCHANGE

Assembly of parts- assembly modeling, interferences of positions and orientation, tolerance analysis, mass property calculations, mechanism simulation and interference checking. Graphics and computing standards-Open GL, Data exchange standards- IGES, STEP, CALS etc., and Communication standards.

Text Book(s):

- 1. Donald Hearn and M.Pauline Baker, "Computer Graphics C version", Edition:2, Pearson Education, 2002.

MEC18R309:DESIGN OF JIGS, FIX	L	Т	Р	С		
TOOLS	3	0	0	3		
Pre-requisite: MEC18R151-	Pre-requisite: MEC18R151- Course Category: Major Ele					
Engineering graphics & design	Course Type : Theory					

Course Objective(s):

- To provide basic knowledge jigs and fixtures and its need for various applications
- To provide the knowledge in design of jigs and fixtures for various components and machines
- To familiarize in press working terminology and selection of dies for press working operation
- To equip the students in designing the dies for the various press work operations

Course Outcome(s):

CO1	Demonstrate the purpose and functions of jigs and fixtures.
CO2	: Design and develop jigs and also jig-less manufacturing.
CO3	Explain various fixture assemblies, design, develop and inspect fixtures.
CO4	Analyze the press working and strip layout process.
CO5	Evaluate the design and development of progressive and compound dies for various
05	applications

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	2	1									3	3	2	
CO2	3	2	3							2		2	3	2	
CO3	3	2	3									2	3	2	
CO4	3	2	3		2			2		2		1	3	2	
CO5	3	2	3									1	3	2	

Course Topics:

Unit-I:PURPOSE, TYPES AND FUNCTIONS OF JIGS AND FIXTURES

Tool design objectives - production devices - inspection devices - materials used in jigs and fixtures - types of jigs - types of fixtures - mechanical actuation - pneumatic and hydraulic actuation-analysis of clamping force-tolerance and error analysis.

Unit-II:JIGS

Drill bushes – different types of jigs - plate latch, channel, box, post, angle plate, angular post, turnover, pot jigs - automatic drill jigs - rack and pinion operated - air operated jigs components - design and development of jigs for given components – Jigless manufacturing concept

Unit-III:FIXTURES

General principles of - boring, lathe, milling, broaching, grinding, planning and shaping fixtures - assembly - inspection and welding fixtures - modular fixtures - design and development of fixtures for given component.

Unit-IV:PRESS WORKING

General principles of - boring, lathe, milling, broaching, grinding, planning and shaping fixtures - assembly - inspection and welding fixtures - modular fixtures - design and development of fixtures for given component.

Unit-V:DESIGN AND DEVELOPMENT OF DIES

Design and development of progressive and compound dies for blanking and piercing operations - bending dies - development of bending dies, forming and drawing dies - development of drawing dies.

Text Book(s):

MEC19D215 - DESIGN FOD M	L	Τ	Р	С			
WIECIORSIS: DESIGN FOR WI	ANUFACIUNING	3	0	0	3		
Pre-requisite: MEC18R302 –	Pre-requisite: MEC18R302 – Course Category: Major Ele						
Manufacturing Processes	Course Type : Theory						

Course Objective(s):

To enable the students to understand the principles of manufacturability and factors to be considered for the various manufacturing process

Course Outcome(s):

CO1	Outline the design features to be considered for manufacturing process
CO2	Identify the influence of materials on form design
CO3	Facilitate the design features of machining processes
CO4	Analyze and design the cast components
CO5	Evaluate the quality of component design

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2														
CO2		3	3										3	2	
CO3		3	3										3	2	
CO4		3	3										3	2	
CO5	1	2			3								2	2	

Course Topics: Unit-I: INTRODUCTION

General design - principles for manufacturability, strength and mechanical factors, mechanisms selection, evaluation method - process capability - feature tolerances - geometric tolerances - assembly limits - datum features - tolerance stacks

Unit-II: FACTORS INFLUENCING FORM DESIGN

Working principle - material, manufacture, design - possible solutions - materials choice- influence of materials on form design of welded members, forgings and castings.

Unit-III: COMPONENT DESIGN – MACHINING CONSIDERATION

Design features to facilitate machining - drills, milling cutters, keyways - doweling procedures - counter sunk screws - reduction of machined area - simplification by separation - simplification by amalgamation – design for fixtures- design for machinability - design for economy - design for clampability - design for accessibility - design for assembly.

Unit-IV: COMPONENT DESIGN – CASTING CONSIDERATIONS

Redesign of castings based on parting line considerations - minimizing core requirements, machined holes, redesign of cast members to obviate cores

Unit-V: REDESIGN FOR MANUFACTURE AND CASE STUDIES

Identification of uneconomical design - modifying the design - group technology - computer applications for DFMA.

MEC19D226. A DVANCED STDENC	L	Τ	Р	С		
WIECION520: ADVANCED SI NENG	3	1	0	4		
Pre-requisite:MEC18R271- Strength of	Course Category:Major Ele	ective				
Materials	Course Type : Theory					

Course Objective(s):

The objective is to present the mathematical and physical principles in understanding the linear continuum behavior of solids.

Course Outcome(s):

CO1	Explain the basic concepts of Stress and Strains
CO2	Interpret the idea of stress and strain in mechanical properties
CO3	Demonstrate mathematically for mechanical properties of material
CO4	Apply mathematical evaluation of real to solid geometries
CO5	Comprehend the mechanical properties with energy and plasticity

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	3		1							1		3	2	
CO2	3	3									1		3	2	
CO3	3	3											3		
CO4	3	2	3								2	2	3	3	
CO5	2	1											2		

Course Topics:

Unit-I:CONCEPTS OF STRESS AND STRAINS

Introduction to Cartesian tensors, Strains: Concept of strain, derivation of small strain tensor and compatibility, Stress: Derivation of Cauchy relations and equilibrium and symmetry equations, principal stresses and directions

Unit-II:MECHANICAL PROPERTIES AND GOVERNING LAWS

Constitutive equations: Generalized Hooke's law, Linear elasticity, Material symmetry Boundary Value Problems: concepts of uniqueness and superposition.

Unit-III: ANALYSIS OF STRESS AND STRAIN IN VARIOUS COORDINATES

Plane stress and plane strain problems, introduction to governing equations in cylindrical and spherical coordinates, axisymmetric problems.

Unit-IV:APPLICATIONS OF MECHANICAL BEHAVIOR OF MATERIALS

Application to thick cylinders, rotating discs, torsion of non-circular cross-sections, stress Concentration problems, thermo-elasticity, 2-d contact problems.

Unit-V:ENERGY AND PLASTICITY

Solutions using potentials. Energy methods. Introduction to plasticity.

Text Book(s):

MEC19D241.DDINCIDLES OF CO	L	Τ	Р	С			
WIECTOR 341: FRINCIFLES OF CO	3	1	0	4			
Pre-requisite:MEC18R151-	Pre-requisite:MEC18R151- Course Category:Major Ele						
Engineering graphics & design	Course Type : Theory						

Course Objective(s):

The aim of undergoing this course is to develop knowledge on the principles of designing a mechanical component.

Course Outcome(s):

CO1	Understanding various processes pertaining to product design.
CO2	Develop basic and advanced designing and prototyping skills.
CO3	Apply modeling and simulation skills in product modeling and optimize design.
CO4	Select suitable material and process for most economic manufacturing.
CO5	Analyze the design based on the quality concept.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	2	2										2		
CO2	1	1	2										1	2	
CO3	2												1		2
CO4	1	1	2										1		1
CO5	2	1									2		1		1

Course Topics:

Unit-I:PRODUCT DESIGN PROCESS

The design process - morphology of design - design drawings - computer aided engineering - designing of standards - concurrent engineering – product life cycle - technological forecasting – market identification competition bench marking - systems engineering - life cycle engineering - human factors in design industrial design.

Unit-II:CONCEPTUAL DESIGN

Creativity and problem solving - product design specifications - conceptual design - decision theory embodiment design - detail design. Rapid prototyping methods- Clay models, Computer Numerically Controlled (CNC) models, SLA/SLS.

Unit-III:MODELLING AND OPTIMIZATION

Mathematical modelling - simulation - geometric modelling - finite element modelling - Data Modelling - optimization - search methods - geometric programming - structural and shape optimization.

Unit-IV:MATERIAL SELECTION AND DESIGN FOR ASSEMBLY

Material selection process - economics - cost vs performance - weighted property index - value analysis role of processing and design - classification of manufacturing processes - design for manufacture - design for assembly- consideration in design of assembly and manufacture - design for castings, forging, metal forming, machining and welding - residual stresses – fatigue.

Unit-V:QUALITY IN DESIGN

Total quality concept - quality assurance – quality tool-QFD-statistics process control - Taguchi methods - robust design - failure model effect analysis- fool proof system-poka yoke analysis.

EQUIPMENT	3	1	0	4		
Pre-requisite: MEC18R303 – Design of	Pre-requisite:MEC18R303 – Design of Course Category:Major Ele					
Machine Elements	Course Type : Theory					

Course Objective(s):

The aim of undergoing this course is to develop basic understanding the topics principle management and entrepreneurship development.

Course Outcome(s):

CO1	Enumerate various material handling equipment's and their applications in industries.
CO2	Design a wide range of hoist systems and its safety elements.
CO3	Compare different drives for hoisting gears and conveyers for engineering applications.
CO4	Enumerate the systems involved in automated guided vehicles.
CO5	Interpret a variety of systems of elevators and its design.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	1												2		
CO2	1	1	3										2		
CO3	1		3										2		
CO4	2	1												1	
CO5	2		3											1	

Course Topics:

Unit-I:INTRODUCTION TO MATERIALS HANDLING EQUIPMENTS

Types, selection and applications of material handling systems, principal groups of material handling equipments and classifications, scope of material handling, criteria for selection of material handling equipments, various material handling problems

Unit-II:DESIGN OF HOISTS

Design of hoisting elements; Welded and roller chains - Hemp and ropes – Design of ropes, pulleys, pulleys systems, sprockets and drums, Load handling attachments. Design of forged hooks and eye hooks – crane grabs – lifting magnets – Grabbing attachments – Design of arresting gear – Brakes: shoe, band and cone types.

Unit-III:DRIVES OF HOISTING GEAR AND CONVEYERS

Hand and power drives - Traveling gear - Rail traveling mechanism – cantilever and monorail cranes – slewing, jib and luffing gear – cogwheel drive – selecting the motor ratings – Types – description – design and applications of Belt conveyers, apron conveyors and escalators pneumatic conveyors, screw conveyors and vibratory conveyers.

Unit-IV:AUTOMATED GUIDED VEHICLE SYSTEM

Types of vehicles and AGVs applications – Vehicle guidance technology – Vehicle management and safety. Storage system performance – storage location strategies – Conventional storage methods and equipments – Automated storage/Retrieval system and Carousel storage system. Deadlocks in Automated manufacturing systems - Petrinet models – Applications in dead lock avoidance- Hurwicz criterion-Expected Monetary Value criterion-Expected Value of Perfect Information (E.V.P. I.)

Unit-V:ELEVATORS

Bucket elevators: design – loading and bucket arrangements – Cage elevators – shaft way, guides, counter weights, hoisting machine, safety devices – Design of fork lift trucks.

MAJOR ELECTIVE - **THERMAL** STREAM

MEC19D212.INTEDNAL COMD	L	Т	Р	С	
WIECTORS12:INTERNAL COWID	3	0	0	3	
Pre-requisite:MEC18R274 - Thermal	ective				
Engineering	Course Type : Theory				

Course Objective(s):

The aim of undergoing this course is to develop basic understanding on working of SI and CI engines and their performance and knowledge on emission control.

Course Outcome(s):

CO1	Distinguish various components of IC engines and analyze the key factors influencing
COI	engine performance
CO2	Analyze the performance of compression ignition engine using fuel injection characteristics
CO3	Identify the sources and types of pollutants in IC engines
CO4	Elaborate the methods and measurement of emission controls
CO5	Evaluate the suitability of alternate fuels for IC engines and measurement techniques for
05	advancement in IC Engines

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	1	3	2	3								2	3	2	
CO2	1	3	3	3								2	3	2	
CO3	3	1										2	3	2	
CO4	1	2				1						1	2	1	
CO5	3	1				1						2	3	2	

Course Topics:

Unit-I:SPARK IGNITION ENGINE

Air Fuel cycles, Ideal Cycles, Spark ignition engine mixture requirements, feedback control, carburetors, fuel injection systems – mono point and multipoint injection, stages of combustion - normal and abnormal combustion - factors affecting knock, combustion chambers - introduction to thermodynamic analysis of SI engine combustion- reason for ignition and ignition advance.

Unit-II:COMPRESSION IGNITION ENGINE

Stages of combustion in CI engine, direct and indirect injection systems, combustion chambers, fuel spray behaviour, spray structure, spray penetration and evaporation - air motion, turbo charging, introduction to thermodynamic analysis of CI engine combustion–recent trends in injection system- Port fuel injection, Direct injection and Common rail injection. Cooling & Lubrication System for IC Engines

Unit-III:POLLUTANTS

Pollutants - sources and types, formation of NOx, hydrocarbon emission mechanism, carbon monoxide formation.

Unit-IV:EMISSION CONTROL

Particulate emissions - methods of controlling emissions- catalytic converters and particulate traps, methods of measurements and driving cycles- engine modification to reduce emission, Testing of IC Engines

Unit-V:ALTERNATE FUELS

Duel fuel, natural fuel and wankel rotary engine- free piston engine-alcohol, hydrogen, natural gas and Liquefied Petroleum Gas - properties, suitability, engine modifications, merits and demerits as fuels, lean burn engines, stratified charge engines, gasoline direct injection engine, homogeneous charge compression ignition, plasma ignition, measurement techniques.

MEC19D212.TUDDO MA	L	Τ	Р	С	
WIECTORSIS: I URDU WIA	3	0	0	3	
Pre-requisite:MEC18R202 -	Course Category: Major El	ective			
Thermodynamics	Course Type : Theory				

Course Objective(s):

Enable the students to understand the concepts and working of turbo machinery.

Course Outcome(s):

CO1	Explain the fundamentals of turbo machines.
CO2	Design of fans and blowers.
CO3	Examine the Performance of centrifugal compressors.
CO4	Demonstrate the construction of axial compressors and solve simple performance
04	calculations.
CO5	Compare and discuss the performances and characteristics of axial and radial flow turbines

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	1	2	2									3		
CO2	3	3	3	3								2	3	2	
CO3	3	2	2										3	2	
CO4	3	3	2										3	2	
CO5	3	3	2									2	3	2	

Course Topics:

Unit-I:INTRODUCTION

Stages of turbo machines – energy transfer between fluid and rotor, stage velocity triangles, thermal turbo machines, classification, general energy equation, modified turbo machines, compression and expansion process.

Unit-II:FAN AND BLOWERS

Fan, blowers – blade design, velocity triangles, stage parameters, flow analysis in impeller blades, design parameter, volute and diffusers, efficiencies and losses, fan noises, causes and remedial measures.

Unit-III:CENTRIFUGAL FLOW COMPRESSORS

Centrifugal compressors - definition and classifications, stage parameters, performance characteristics - cascade of blades, cascade tunnel, blade geometry, cascade variables, energy transfer and loss in terms of lift and drag.

Unit-IV:AXIAL FLOW COMPRESSORS

Axial flow compressors - definition and classifications, constructional details, stage velocity triangles, stage work, stage pressure rise, H-S diagram, stage efficiencies and losses, degree of reaction, radial equilibrium, surging and stalling, performance characteristics.

Unit-V:AXIAL AND RADIAL FLOW TURBINES

Axial and radial flow turbines - construction details, 90° IFR turbine, stage work, stage velocity triangles, stage pressure rise, impulse and reaction stage, effect of degree of reaction, H-S diagram, efficiencies and losses, performance characteristics.

MEC19D220.CAS DVNAMICS AN	L	Т	Р	С			
MECIOR529: GAS DI MAIVILOS AN	MEC18R329: GAS DYNAMICS AND JET PROPULSION						
Pre-requisite:MEC18R272 - Fluid	Course Category:Major Ele	ective					
Mechanics and Machinery	Course Type : Theory						

Course Objective(s):

To understand the features of compressible isentropic flows and irreversibilities like shocks. To provide a basic knowledge of jet and rocket propulsion technologies

Course Outcome(s):

CO1	Understand the basic concepts of compressible flow
CO2	Analyze the isentropic flow
CO3	Analyze compressible flows with friction and heat transfer and examine shock waves
CO4	Explain the concept of jet propulsion
CO5	Evaluate the performance of rocket propulsion systems

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	2										2	2		
CO2	3	2			2							2	3		
CO3	3	2			2							2	3		
CO4	3		3				2			1		2	3	3	
CO5	3	2	3				2			1		2	2	3	

Course Topics:

Unit-I:FUNDAMENTALS OF COMPRESSIBLE FLOW

Compressible flow, definition, Mach waves and Mach cone, stagnation states, Mass, momentum and energy equations of one-dimensional flow.

Unit-II:ISENTROPIC FLOW

Isentropic flow through variable area ducts, nozzle s and diffusers, subsonic and supersonic flow, variable area ducts, choked flow, Area Mach number relations for isentropic flow

Unit-III:FANNO FLOW, RAYLEIGH FLOW AND NORMAL SHOCKS

Flow through constant area ducts - Rayleigh and Fanno flows, Normal shock relations, oblique shock relations, isentropic and shock tables

Unit-IV:JET PROPULSION

Theory of jet propulsion, thrust equation, thrust power and propulsive efficiency, Operating principle and cycle analysis of ramjet, turbojet, turbofan and turboprop engines.

Unit-V:ROCKET PROPULSION

Types of rocket engines, propellants & feeding systems, ignition and combustion, theory of rocket propulsion, performance study, staging, terminal and characteristic velocity, space flights

MEC18D401.DOWED DI ANT	L	Т	Р	С		
WIECIOR401:FUWER FLANT	3	1	0	4		
Pre-requisite:MEC18R202 -	Pre-requisite:MEC18R202 - Course Category:Major Electronic Cat					
Thermodynamics	Course Type : Theory					

Course Objective(s):

To acquire knowledge on operation, performance analysis and environmental effects of power plants

Course Outcome(s):

CO1	Explain the principle of operation of thermal power plant and its accessories
CO2	Illustrate nuclear and hydel power plants, and its environmental impact
CO3	Analyze performance of gas turbine and diesel engine power plants, and its environmental consequences
CO4	Discuss various types of power plants using renewable energy sources
CO5	Apply the cost benefit analysis to power generation and distribution

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	1					1					2	3		
CO2	3	1					1					2	3		
CO3	3	2					2					1	3		
CO4	3	1					2					2	3		
CO5	3	2			1							1	3		

Course Topics:

Unit-I:THERMAL POWER PLANT

Coal based thermal power plants, basic Rankine cycle and its modifications, layout of modern coal power plant, super critical boilers, FBC boilers, turbines, condensers, steam and heating rates, subsystems of thermal power plants, fuel and ash handling, draught system, feed water treatment, Coal disposal for Thermal power plant binary cycles and cogeneration systems

Unit-II:NUCLEAR AND HYDEL POWER PLANT

Basics of nuclear energy conversion, Layout and subsystems of nuclear power plants, Boiling Water Reactor (BWR), Pressurized Water Reactor (PWR), CANDU Reactor, Pressurized Heavy Water Reactor (PHWR), Fast Breeder Reactors (FBR), gas cooled and liquid metal cooled reactors, safety measures for nuclear power plants, Waste disposal for nuclear power plant Hydroelectric power plants, classification, typical layout and components

Unit-III: GAS TURBINE AND DIESEL POWER PLANT

Gas turbine and combined cycle power plants, Brayton cycle analysis and optimization, components of gas turbine power plants, combined cycle power plants, Integrated Gasifier based Combined Cycle (IGCC) systems-Diesel engine power plant – components and lay-out, selection of engine type, environmental hazards.

Unit-IV:UNCONVENTIONAL POWER PLANTS

Unconventional power plants – Solar PV and Solar Thermal, wind, ocean thermal energy conversion, tidal and geothermal power plants, MHD concepts of energy conversion, Fuel Cell power systems, Biogas.

Unit-V:PLANT ECONOMICS

Load curve – definition – fixed and operating costs, comparison of economics of different types of power plants, tariff types, pollution control technologies for different power plants

Text Book(s):

- 1. R. K.Rajput, , "Power Plant Engineering", Edition:5, Laxmi Publications, 2016.
- 2. Domkundwar and Arora Domkundwar, "Power Plant Engineering", Edition:6, Dhanpat Rai & Co, 2016.

MEC19D402. A LITOMODIL E	L	Т	Р	С	
WIECIOR402:AUTOWIODILE	ENGINEERING	3	1	0	4
Pre-requisite:MEC18R202 -	ective				
Thermodynamics	Course Type : Theory				

Course Objective(s):

To understand the construction and working principle of various parts of an automobile

Course Outcome(s):

CO1	Outline the general classifications and functions of automobiles engines
CO2	Interpret and analyze the working principles of steering system, brakes and suspension
02	system.
CO3	Examine the working principle of automobile transmission systems
CO4	Distinguish the various engine auxiliary system and automotive electrical and electronic
C04	system
CO5	Analyze the importance of alternate fuels and its properties to the environment

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	2	2			2						1	2	1	
CO2	2	2	2										2	1	
CO3	2	2	2										2	1	
CO4	2	2	2				2						2	1	
CO5	2	2	2				1						2	1	

Course Topics:

Unit-I:VEHICLE STRUCTURE AND ENGINES

Types of automobiles, vehicle construction and layouts, chassis, frame and body, vehicle aerodynamics, IC engines- components, function and materials, variable valve timing (VVT).

Unit-II:STEERING, BRAKES AND SUSPENSION SYSTEMS

Steering geometry and Steering linkages, types of steering gear box, power steering, types of front axle, types of suspension systems, pneumatic and hydraulic braking systems, antilock braking system (ABS), electronic brake force distribution (EBD) and traction control.

Unit-III: TRANSMISSION SYSTEMS

Clutch types & construction, gear boxes- manual and automatic gear shift mechanisms, over drive, transfer box, flywheel, torque converter, propeller shaft, slip joints, universal joints, differential and rear axle, Hotchkiss drive and Torque tube drive.

Unit-IV:ENGINE AUXILIARY SYSTEMS

Electronic injection for SI and CI engines, unit injector system, rotary distributor type and common rail direct injection system, transistor based coil ignition & capacitive discharge ignition systems, turbo chargers (WGT, VGT), engine emission control by 3-way catalytic converter system, Emission norms (Euro & BS).

Unit-V:ALTERNATE ENERGY SOURCES

Alternative energy sources, natural gas, LPG, biodiesel, bio-ethanol, gasohol and hydrogen fuels in automobiles, modifications needed, performance, combustion & emission characteristics of alternative fuels in SI and CI engines, Electric and Hybrid vehicles, application of Fuel Cell.

Text Book(s):

MAJOR ELECTIVE -INDUSTRIAL ENGINEERING STREAM

MEC19D204.MECHATDON	L	Τ	Р	С						
WEC18K504:WECHAIKON	3	0	0	3						
	Course Category: Major Elective									
Pre-requisite: NII	Course Type : Theory									

Course Objective(s):

- To understand the structure of microprocessors and their applications in mechanical devices
- To understand the principle of automatic control and real time motion control systems, with the help of electrical drives and actuators
- To understand the use of micro-sensors and their applications in various fields learn about work and heat interactions, and balance of energy between system and its surroundings.

Course Outcome(s):

CO1	Explain the basic concepts systems integration and modeling.
CO2	Interpret the idea interfacing sensor and system.
CO3	Interpret the idea of interfacing actuating drives with system.
CO4	Demonstrate the real time advanced sensors and materials in mechatronics system.
CO5	Analyze various integration of mechatronics system and automation.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	3	2	2	1			1			1	2	2	1	
CO2	2	2	2	1			1		2			2	2	2	
CO3	2	2	2	1			1		2			2	2		
CO4	2	2	2				2	1			1		2		2
CO5	3									2	1		1	1	2

Course Topics:

Unit-I:INTRODUCTION TO MECHATRONICS SYSTEMS

Introduction: Definition of Mechanical Systems, Philosophy and approach; Systems and Design: Mechatronic approach, Integrated Product Design, Modeling, Analysis and Simulation, Man-Machine Interface

Unit-II:MECHANICAL PROPERTIES AND SENSORS AND TRANSDUCERS

Classification, Development in Transducer technology, Opto-electronics-Shaft encoders, CD Sensors, Vision System, etc.

Unit-III:DRIVES AND ACTUATORS

Hydraulic and Pneumatic drives, Electrical Actuators such as servo motor and Stepper motor, Drive circuits, open and closed loop control; Embedded Systems: Hardware Structure, Software Design and Communication, Programmable Logic Devices, Automatic Control and Real Time Control Systems

Unit-IV:SMART MATERIALS

Shape Memory Alloy, Piezoelectric and Magneto strictive Actuators: Materials, Static and dynamic characteristics, illustrative examples for positioning, vibration isolation, etc.

Unit-V:MICROMECHATRONICS SYSTEMS

Microsensors, Microactuators; Micro-fabrication techniques LIGA Process: Lithography, etching, Micro-joining etc. Application examples; Case studies Examples of Mechatronic Systems from Robotics Manufacturing, Machine Diagnostics, Road vehicles and Medical Technology.

MEC19D205 · MICDODDOCESSOI	L	Т	Р	С						
WIECI6K505: WICKOFKOCESSOF	3	0	0	3						
Due neguigites Nil	Course Category: Major Elective									
Pre-requisite: 1011	Course Type : Theory									

Course Objective(s):

To understand the basic concepts of Digital circuits, Microprocessor system and digital Controller and Interfacing

Course Outcome(s):

CO1	Explain the basic concepts of microprocessor number system
CO2	Interpret the basics of instructions set in microprocessor 8085
CO3	Analyze the usage of peripheral devices of 8085 for advanced interfacing
CO4	Apply the real time interfacing of 8085
CO5	Analyze the usage of signal processing for real time measurements

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	2	1										2	1	1
CO2		2											1		
CO3			3				2	1			3	3		3	2
CO4			3	2			2							2	
CO5	3												1		2

Course Topics:

Unit-I: NUMBERS SYSTEMS AND DIGITAL USAGE

Number Systems, codes, digital electronics: Logic Gates, combinational circuits design, Flip-flops, Sequential logic circuits design: Counters, Shift registers. Introduction to 8085 Functional Block Diagram, Registers, ALU, Bus systems, Timing and control signals.

Unit-II: MACHINE INSTRUCTIONS

Machine cycles, instruction cycle and timing states, instruction timing diagrams, Memory interfacing.

Unit-III: MICROPROCESSOR AND PERIPHERAL DEVICES

Assembly Language Programming: Addressing modes, Instruction set, simple programs in 8085; Concept of Interrupt, Need for Interrupts, Interrupt structure, and Multiple Interrupt requests and their handling, Programmable interrupt controller; Interfacing peripheral. Programmable peripheral interface (8255)

Unit-IV: MICRO PROCESSOR 8085 AND INTERFACING

Interfacing Analog to Digital Converter & Digital to Analog converter, Multiplexed seven segments LED display systems, Stepper Motor Control, Data Communication: Serial Data communication (8251), Programmable Timers (8253); 8086/8088 Microprocessor and its advanced features

Unit-V: INTRODUCTION TO SIGNAL PROCESSING

Introduction to Digital Control: Sampling theorem, Signal conversion and Processing, Z-Transform, Digital Filters, Implementation of Digital Algorithm.

Text Book(s):

MEC18R319 : PROCESS PLAN	L	Τ	Р	С					
ESTIMATION	3	1	0	4					
Bue neguicite. Nil	Course Category: Major Elective								
re-requisite: Mi	Course Type : Theory								

Course Objective(s):

To introduce the process planning concepts and to make cost estimation for various products after process planning

Course Outcome(s):

CO1	Outline the various process planning stages with its design and selections.
CO2	Demonstration of various functions of Estimation and Costing with references to
02	productions and control
CO3	Analyse the various elements associated with cost estimation.
CO4	Measure of machining time of various manufacturing operations.
CO5	Analyse and estimate the product cost for various manufacturing processes

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2				2	2	2				3	1			
CO2	2	3		3	2						2	2			
CO3			3		3						2			1	
CO4		2	2							2	2				
CO5	2	2						2		3	1				

Course Topics:

Unit-I: PROCESS PLANNING

Introduction of Process Planning- methods of process planning, drawing interpretation, material evaluation, steps in process selection, production equipment and tooling selection

Unit-II: ESTIMATING AND COSTING

Importance and aims of cost estimation - functions of estimation - costing - importance and aims of costing - difference between costing and estimation - importance of realistic estimates - estimation procedure.-Process planning activities- documents for process planning, economics of process planning, case studies

Unit-III: COST ESTIMATION

Introduction to cost estimation- importance of costing and estimation, methods of costing, elements of cost estimation, types of estimates, estimating procedure, estimation of labor cost, material cost, allocation of overhead charges, calculation of depreciation cost.

Unit-IV: ESTIMATION OF MACHINING TIME

Machining time estimation- importance of machine time calculation, machining time for different lathe operations, drilling and boring time calculations, Machining time calculation for Milling, Shaping, Planing and Grinding

Unit-V: PRODUCT COST ESTIMATION

Production costs- different production processes for different jobs, estimation of forging cost, estimation of welding cost, estimation of foundry cost, estimation of machining cost

Text Book(s):

MEC18R324 : PLANT LAYOUT	L	Τ	Р	С					
HANDLING	3	0	0	3					
Bue neguicite. Nil	Course Category: Major Elective								
re-requisite: Mil	Course Type : Theory								

Course Objective(s):

The aim of this course is to develop basic understanding of plant layout and material handling.

Course Outcome(s):

CO1	Define the various plant layout methods and facilities required for process planning.
CO2	Identify the service requirements and selection of sites pertaining to plant location.
CO3	Classify various space requirements and layout techniques for various production plants.
CO4	Analyze various production flow problems related to industrial scenario.
CO5	Outline various machines and material handling equipment.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	3	2			2	2				1			2	
CO2	3	3	3		2	2	1						2	3	
CO3		3	2		3						1	1		2	
CO4	2	2	3	3	1						3				
CO5	1	3		1			2				1			2	

Course Topics:

Unit-I: INTRODUCTION TO FACILITY DESIGN

Facilities requirements- need for layout study – types of layout- Symptoms of poor layout, Technique and procedure to determine plant layout.- facilities design - sources of information for facilities design - process design - flow analysis techniques.

Unit-II: PLANT LAYOUT- WORKSTATION DESIGN

Site selection- plant location analysis – factors- costs - location decisions- Pitfalls in selection of site location, Economic versus social significance – auxiliary -plant cost – land – building and production – equipment material cost - services requirement- employee services- space requirements- activity relationship analysis.

Unit-III: SPACE REQUIREMENTS

Office layout techniques and space requirements - area allocation - application of computer simulation and modeling - simple problems in single facility location models - network location problems.

Unit-IV: PRODUCTION FLOW DESIGN

Organization chart - activity relationship chart - production routing sheets - flow process chart - worksheet for activity relationship chart- nodal diagram- operation chart - assembly chart for product - package design unit load design - departmental layout - production flow analysis (PFA) - line balancing - financial analysis - design cycle - SLP procedure manpower - machinery requirements - computer algorithms - ALDAP, CORELAP, CRAFT.

Unit-V: MACHINES AND MATERIAL HANDLING

Computations of machine requirements - area and cost of production equipments- Manual and mechanical handling, Handling ratio, Effects of handling on productivity - unit load concept - material handling system

design - handling equipment types - selection and specification - containers and packaging - receiving and shipping areas - storage analysis - plant services - total space requirements.

MEC18D220 . DODOTICS AND DO	L	Τ	Р	С	
MECIORSSU: RODOTICS AND RO	3	0	0	3	
Pre-requisite: MEC18R374 -	lective				
Kinematics and Theory of Machines	Course Type : Theory				

Course Objective(s):

Students will gain knowledge in automation with brief history of robot and its applications. Basic knowledge acquired in robot end effectors and their design. Robot Programming methods & Languages of robot.

Course Outcome(s):

CO1	Classify the different types of robots and its anatomy.
CO2	Construct the robot kinematic and its design.
CO3	Develop programming principles and languages for a robot control system.
CO4	Discuss various applications of industrial robot systems.
CO5	Compare the different robot configuration and its application in various industries.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	1	1										2		
CO2	2	1	2		1							1	2		
CO3	2	1	3		1			1				1	2	2	2
CO4	2	2	3										2		
CO5	2	3	3										2	2	

Course Topics: Unit-I: INTRODUCTION

Fundamentals of Robotics- robot anatomy, robot classification.

Unit-II: ROBOT KINEMATICS

General characteristics - classification - special purpose tools - assembly fixtures – Typical designs, compliance in wrists - end effectors multiple end effectors systems.

Unit-III: ROBOT PROGRAMMING

Robot programming and languages - robot language development, language classification.

Unit-IV: ROBOT INDUSTRIAL APPLICATIONS

Robot applications - robot applications in manufacturing: material transfer and machine loading / unloading - processing operations like welding and painting - assembly operations – inspection, Safety considerations.

Unit-V: ROBOT DEVELOPMENTS

Recent developments in advanced robotics - special applications of robotics - nuclear industry, surgery, food manufacturing - miniature and micro robotics: technologies and applications.

MEC18R334 : FOUNDRY MECH	L	Τ	Р	С			
MANAGEMEN	3	0	0	3			
Pre-requisite: MEC18R302 –	Course Category: Major Elective						
Manufacturing Processes							

Course Objective(s):

In this course you will develop skills across a range of processes and materials which are commonly used in automobile industries. The course will be introduced to discuss the different methods and materials through specific projects, with an emphasis on the relation to individual concepts in making automobile components. Some of these include; conventional casting stir casting, centrifugal casting, lost wax casting (aluminium), fabrication in metal and timber pattern making.

Course Outcome(s):

CO1	Define the basic principles of casting and foundry processes with its modern techniques
CO1	Evaluate and identify the specific methods, furnace and materials in order to materialize the
02	specific individual concepts
CO3	Identify the materials and methods in order to develop an effective automobile components
	with the help of advanced casting techniques
CO4	Examine the casting process with its boundary conditions
CO5	Identify and apply the mechanism behind the solidification of metals and check for the
CO5	soundness of the components

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3												2		
CO2		3												3	
CO3				3											
CO4		3			3										3
CO5	2				1										1

Mapping of Course Outcome(s):

Course Topics: Unit-I: INTRODUCTION

Introduction to casting and foundry industry- basic principles of casting processes-sequence in foundry operations- patterns- moulding practice- Modern techniques used in insert and removal of different kinds of cores made of other than sand- ingredients of moulding sand and core sand- sand testing- different moulding processes.

Unit-II: FURNACES

Types of furnaces used in foundry-furnaces for melting, melting practice for steel, cast iron, aluminium alloys, copper alloys and magnesium alloys- Furnaces withstanding higher temperature - Fuels and combustion techniques to improve resident temperature in furnaces- safety considerations- fluxing, degassing and inoculation

Unit-III: SPECIAL CASTING TECHNIQUE

Sand casting- permanent mould casting, die casting, centrifugal casting, plaster mould casting, investment casting, continuous casting, squeeze casting, full mould process, and strip casting.

Unit-IV: CASTING PROCESS

Overview of pouring and solidification- concept of shrinkage- Chvorinov's rule- chilling-gating systemsfunctions of riser- types of riser- bottom pouring and top pouring -yield calculations- visualization of mould filling (modeling).

Unit-V: SOLIDIFICATION

Concepts of solidification, directional solidification- role of chilling- filtration of liquid metals, consumablesdetails of inoculation and modification – with respect to cast irons and Al-Si system- casting defects- soundness of casting and its assessment.

MEC19D404 · DDINCIDLES OF	L	Τ	Р	С					
VIECION404: FRINCIFLES OF	3	0	0	3					
Bro pognicitor Nil	Course Category: Major Elective								
rre-requisite: 1011	Course Type : Theory								

Course Objective(s):

To make the student understand about how the planning, decision making activities on utilizing human resources effectively, how to motivate and lead a team and how to control and report a problem occurred in organization

Course Outcome(s):

CO1	Elaborate the basic concepts of management and types of organizations.
CO2	Identify the process of planning tools and explain the decision making processes.
CO3	Demonstrate the HRM process for making effective organization
CO4	Explain the leadership qualities and motivation theories.
CO5	Demonstrate the controlling process related to computers

Mapping of Course Outcome(s):

		0													
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1		3										3	2		
CO2	2	2				2							1		
CO3		1						2	2	2		2	1		
CO4		1						2		2	2				
CO5				3						2		3			

Course Topics: Unit-I: INTRODUCTION

Definition of management, science or art, manager vs entrepreneur; Types of managers managerial roles and skills; Evolution of management- scientific, human relations, system and contingency approaches; Types of Business Organizations, sole proprietorship, partnership, company, public and private enterprises; Organization culture and environment

Unit-II: CURRENT TRENDS AND ISSUES IN MANAGEMENT

Nature and purpose of Planning, types of Planning, objectives, setting objectives, policies, Strategic Management, Planning Tools and Techniques, Decision making steps & processes.

Unit-III: ORGANIZING AND HRM

Nature and purpose of Organizing, formal and informal organization, organization structure, types, line and staff authority, departmentalization, delegation of authority, centralization and decentralization, job design, human resource management, HR planning, Recruitment selection, Training & Development, Performance Management, Career planning and Management.

Unit-IV: MOTIVATION AND LEADERSHIP

Directing, individual and group behavior, motivation, motivation theories, motivational techniques, job satisfaction, job enrichment, leadership, types & theories of leadership, effective communication.

Unit-V: CONTROLLING AND REPORTING

Controlling, system and process of controlling, budgetary and non-budgetary control techniques, use of computers and IT in management control, productivity problems and management, control and performance, direct and preventive control, reporting.

MEC19D414-SENSODS AND	L	Τ	Р	С				
MEC18K414:SENSOKS AND	3	1	0	4				
Pre-requisite:EEE18R172- Basic	Course Category: Major Elective							
Electrical Engineering	Course Type : Theory							

Course Objective(s):

This course aims to disseminate the concept of various sensors with the recent developments, principles of measuring parameters in sensors and transducers.

Course Outcome(s):

CO1	Applications of various sensors used in robotics and CNC machines.
CO2	Examine the Transducers suitability for various types of Mechanical applications.
CO3	Make use of the potentiometer and Thermocouple device for the real time applications.
004	Inspect the Piezoelectric crystal and Capacitance Transducers used for Measurement
CO4	systems.
CO5	Applications of various sensors used in robotics and CNC machines.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	1											2		
CO2		1		1									2		
CO3	2	2	1											2	
CO4	2	2	1											2	
CO5	2	2			3										2

Course Topics:

Unit-I:INTRODUCTION & BASICS OF INSTRUMENTS

Measurement systems – significance of measurements- methods of measurements – direct and indirect methods - classification of instruments – deflection and null type - generalized measurement system - characteristics of instruments

Unit-II:TRANSDUCERS

Transducer – definition - classification of transducer – analog and digital transducer - primary and secondary transducer - active and passive transducer-inverse transducer - characteristics and choice of transducer - factors influencing choice of transducer - resistance transducer - basic principle

Unit-III:POTENTIOMETER AND THERMOCOUPLE

Potentiometer – loading effects- resolution- linearity- non-linear potentiometer- noise in potentiometer - resistance strain gauge – types- resistance thermometer - thermistors – characteristics - thermocouple – compensation circuits – junction and lead – compensation - merits and demerits. Inductance transducer - basic principle- linear variable differential transformer

Unit-IV:CAPACITANCE AND PIEZOELECTRIC CRYSTALS

Capacitance transducer – basic principle- Transducers using change in - area of plates - distance between plates - variation of dielectric constants- frequency response - merits - demerits and uses - piezoelectric transducer - basic principle - mode of operation - properties of piezoelectric crystals - loading effects - frequency response and impulse response uses.

Unit-V:CNC TECHNOLOGY & ROBOT SENSORS

CNC machines and part programming. Industrial Robotics. Pressure sensors - bourdon tube- bellows- and diaphragm - digital transducer - shaft encoder - optical encoder - digital speed transducer - Hall Effect

transducer - sound sensors - vibration sensors - seismic transducer - chemical sensor - PH sensor - velocity transducer- introduction to smart sensors.

MEC18D416 INDUSTRI	L	Τ	Р	С				
WIECIOR410: INDUSTRI	3	0	0	3				
Due neguicites Nil	Course Category: Major Elective							
Pre-requisite: INII	Course Type : Theory							

Course Objective(s):

This course aims to acquaint with the idea of Safety Rules followed in Industries and recognize the safety legislation, OHS, safety management and Human factors Issues.

Course Outcome(s):

CO1	Illustrate the representation of various Safety theories and Principles followed in Real
	Time Industries.
CO2	Identify the various safety tools that can be used to solve the industrial problems.
CO3	Apply the fire prevention methods for various types of fire.
CO4	Categorizing the various types of hazards in workplace, effects and its control measures.
CO5	Utilize the various safety standards that can be applicable in industries.

PO2 PO3 PO4 **PO5 PO1 PO6 PO7 PO8 PO9 PO10 PO11 PO12** PSO1 PSO2 PSO3 **CO1** 2 **CO2** 2 2 2 3 2 1 3 **CO3** 3 2 2 2 2 **CO4** 2 2 2 1 1 CO5 2 2 2 2 2

Mapping of Course Outcome(s):

Course Topics: Unit-I: ACCIDENT PREVENTION

Definitions - history of safety movement - ILO - NSC - BSC - LPA Industrial safety, Industrial hygiene and safety aspects related to toxicity, noise, pressure, temperature, vibrations, radiation etc. Explosions including dust, vapour, cloud and mist explosion.

Unit-II: SAFETY MANAGEMENT

Safety systems - safety information system - safety control system - hazard and risk analysis - Theories and principles of accident causation - cost of accidents - accident reporting and investigation - safety committee - safety suggestion scheme - Safety education and training -safety management techniques

Unit-III: FIRE PREVENTION AND PROTECTION

Sources of ignition – fire triangle – principles of fire extinguishing – active and passive fire protection systems – various classes of fires – A, B, C, D, E – types of fire extinguishers – fire stoppers – hydrant pipes – hoses – monitors – fire watchers – layout of stand pipes – fire station-fire alarms and sirens – maintenance of fire trucks – foam generators – escape from fire rescue operations – fire drills – notice-first aid for burns.

Unit-IV: OCCUPATIONAL HEALTH AND HYGIENE

Physical hazards - chemical hazards - recognition of hazards - evaluation - control measures - occupational health - concept and spectrum of health - industrial toxicology - definitions - hazard - toxicity - local and systemic effect - routes of entry

Unit-V: SAFETY REGULATION

History of legislations related to safety - Environmental protection Act

Text Book(s):

MEC18D417 · WODK	L	Τ	Р	С				
	3	0	0	3				
Due neguicites Nil	Course Category: Major Elective							
re-requisite: MI	Course Type : Theory							

Course Objective(s):

This course will focus on mathematical modelling. A strong emphasis will be given to model formulation.

Course Outcome(s):

CO1	Contrast the relationship between productivity, work content and time.
CO2	Illustrate the operations and ineffective time in shop floor.
CO3	Apply the various process and time study methods.
CO4	Analyze the various jobs in order to provide factual information.
CO5	Design of physical and psychosocial work systems and workplaces.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2												2		
CO2	1				2								1	1	
CO3	2				2								2		
CO4		2		2				2				1		2	1
CO5	1	1	3					1	1			2	1	2	3

Course Topics: Unit-I: INTRODUCTION

History of work study - Purpose of work study, its objective, procedures & applications- productivity and living standards - productivity measurement - work design and the organization- work content and time.

Unit-II: OPERATIONS STUDY

Objectives and basic procedure of work measurements -Total time for a job or operation - total work content and ineffective time - methods and motions - graphic tools.

Unit-III: PROCESS AND TIME STUDY

Process analysis - process and activity charts - operation analysis - basic procedure- micro motion study - principles of motion economy - work measurement - stop watch time study - standard data - methods time measurement (MTM) - development of production standards - work sampling - rating and allowances - setting standard times for jobs - standard data - and predetermined time standards.

Unit-IV: JOB EVALUATION

Basic concepts - objective and subjective methods - Gantt incentive plans standard data system - compensation schemes - relationship of work study to incentive schemes- wage incentive plans.

Unit-V: ERGONOMICS

Fundamental concepts- issues in design of systems - human performance in physical work - measuring work by physiological means- work posture - fatigue measurement and evaluation - environmental factors and work systems- industrial product design.

MEC19D410 DODUCTION DI AN	L	Τ	Р	С	
MECIOR419: FRODUCTION FLAN	3	1	0	4	
Pre-requisite: MEC18R375 - Metal	lective				
cutting technology	Course Type : Theory				

Course Objective(s):

To introduce the Production Planning concepts and to make Control for various production activities

Course Outcome(s):

CO1	Outline various Production planning analysis with its design and selections.
CO2	Illustrate the concepts of value analysis, process planning and routing.
CO3	Examine the product data management and Enterprise application integration
CO4	Apply the various inventory control methods.
CO5	Identify the scheduling and dispatching methods, progress reporting and expediting.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	2	2	2	3							2	2		
CO2	2	2										2	3	2	
CO3	2			3	1							1	2		2
CO4	2	2	2	2	3							2	3	2	
CO5	2				1						1	1	2	2	1

Course Topics:

Unit-I: BASICS

Objectives - types of production - product development and design - standardization- simplification and specialization - break even analysis – forecasting - need and its use - market share - sales trend analysis - use of indicators and correlation analysis - effects - accuracy of forecasts.

Unit-II: PRODUCT PLANNING

Extending the original product information - value analysis - process planning and routing - steps in process planning

Unit-III: PRODUCT DATA MANAGEMENT

Product data management (PDM) - Enterprise application integration (EAI).

Unit-IV: INVENTORY CONTROL

Material and tool control - physical control - record keeping - two-bin material control system – the super market concept - procurement and control of tools - inventory control - determination of economic order quantity and economic lot size- ABC analysis - reorder point and lead time - MRP I and II - JIT and KANBAN.

Unit-V: SCHEDULING AND DISPATCHING

Loading and scheduling information rearranging for loading and scheduling - master scheduling - perceptual loading - order scheduling devices – dispatching - progress reporting and expediting.

MEC18R424 : INDUSTRIAL AU	L	Τ	Р	С	
ROBOTICS	3	1	0	4	
Pre-requisite: MEC18R374 –	lective				
Kinematics of Machinery	Course Type : Theory				

Course Objective(s):

To produce engineering graduates who are competent and able to apply principles of science and engineering for solving current problems related to industrial automation and robotics.

Course Outcome(s):

CO1	Illustrate the production concept and strategies of automation.
CO2	Construct the CIM architecture and FMS.
CO3	Design of flow lines and the implementation of line balancing methods.
CO4	Examine the function of automated material handling and storage systems and apply the
04	inspection methods involved in CMM and machine vision.
CO5	Design of industrial robots.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2				1			1				1	1	1	
CO2	2				1							2	1	2	
CO3	3	2	3	1	2							2	3	2	2
CO4	2				2							2	2	2	2
CO5	3		2		2							3	2	2	2

Course Topics: Unit-I: INTRODUCTION TO AUTOMATION

Classification of Manufacturing Industries – Types of Production – Functions in Manufacturing – Organization and Information processing in Manufacturing – production concepts and mathematical models – concepts, definition, objective, arguments and strategies of automation.

Unit-II: CIM AND FMS

Nature role and development of CIM Architecture- computers in CIM-simulation software - Group technologypart families-parts classification and Coding-Production Flow analysis-cellular manufacturing cell designbenefits MRP I and II -computer aided quality control.

Definitions – classifications – flexibility – typical configurations – computer control systems – planning the FMS – analysis methods for flexible manufacturing systems – applications and benefits.

Unit-III: AUTOMATED FLOW LINES AND ASSEMBLY SYSTEMS

General terminology – analysis of transfer lines with and without storage buffers – partial automation – computer simulation of automated flow lines – assembly systems and line balancing – methods of line balancing – computerized line balancing methods.

Unit-IV: AUTOMATED MATERIALS HANDLING AND STORAGE SYSTEMS

Functions – types of equipment, analysis and design of conveyor systems and automated guided vehicle systems, automated storage/retrieval systems, carousel storage systems, work-in progress storage, interfacing handling and storage with manufacturing - Inspection - Principles and methods – sensor technologies – coordinate measuring machines, contact and noncontact inspection methods – machine vision.

Unit-V: INDUSTRIAL ROBOTICS

Introduction to robot programming- Robot definition and types – Robot anatomy - Mobile Robot and its advantages – Case studies – pick and place robot – automatic camera – washing machine – Application of robots in industries

Text Book(s):

- M. P. Groover, "Automation Production Systems, and Computer Integrated Manufacturing", Edition:
 4, Pearson Education, 2016.

MEC18R430 : INTEGRATED M	L	Τ	Р	С			
SYSTEMS	3	1	0	4			
Pre-requisite: MEC18R302 -	Pre-requisite: MEC18R302 - Course Category: Major El						
Manufacturing Processes	Course Type : Theory						

Course Objective(s):

To understand the application of computers in various aspects of Manufacturing viz., Design, Proper planning, Manufacturing cost, Layout & Material Handling system.

Course Outcome(s):

CO1	Identify the opportunities in integrated manufacturing systems and the use of various manufacturing strategy.
CO2	Apply the group technology and various process planning methods.
CO3	Apprehend the production planning and control and its techniques.
CO4	Illustrate the use of computers in controlling manufacturing process and in inspection
	methods and testing
COS	Relate the concepts of flexible manufacturing systems, CIM concepts in rapid prototyping,
CUS	artificial intelligence and expert systems.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2		1		1						2		2	1	
CO2	2		1		2						2		2	1	
CO3	2		3		3						2		2	2	1
CO4	2		1		3						2		2	3	3
CO5	2		2		3						3	2	2	2	2

Course Topics: Unit-I: INTRODUCTION

Objectives of a manufacturing system – identifying business opportunities and problems classification production systems – linking manufacturing strategy and systems analysis of manufacturing operation.

Unit-II: GROUP TECHNOLOGY AND COMPUTER AIDED PROCESS PLANNING

Introduction – part families – parts classification and cooling – group technology machine cells benefits of group technology. Process planning function CAPP – computer generated time standards.

Unit-III: COMPUTER AIDED PLANNING AND CONTROL

Production planning and control – cost planning and control – inventory management – material requirement planning (MRP) - shop floor control – factory data collection system – automatic identification system – barcode technology – automatic data collection system.

Unit-IV: COMPUTER MONITORING

Types of production monitoring system – structure model of manufacturing process – process control & strategies – direct digital control – supervisory computer control – computer in QC – contact inspection methods non – contact inspection method – computer – aided testing – integration of CAQC with CAD/CAM

Unit-V: INTEGRATED MANUFACTURING SYSTEM

Definition – application – features – types of manufacturing systems – machine tools – materials handling system – computer control system – DNC systems manufacturing cell. Flexible manufacturing system (FMS) – the FMS concept – transfer systems – head changing FMS – variable mission manufacturing system – CAD/CAM system – human labor in the manufacturing system – computer integrated manufacturing system benefits. Rapid prototyping – artificial intelligence and expert system in CIM

MEC19D429 - TEDO TEC	L	Τ	Р	С					
MIEC10K450: IEKO IEC	3	1	0	4					
Due neguicites Nil	Course Category: Major Elective								
rre-requisite: 1011	Course Type : Theory								

Course Objective(s):

The aim of undergoing this course is to understand the Maintenance and Reliability Engineering field; it introduces maintenance aspects of planning, control, costs, design, purchasing and installation

Course Outcome(s):

CO1	Know the basic concepts of Probability distributions
CO2	Identify the different type of Reliability techniques and models
CO3	Summarize the various maintainability and reliability concepts
CO4	Understand the principles of plant replacement policy
CO5	Examine the knowledge on condition based maintenance monitoring of vibration
05	parameters

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	1	1	1	1	1								1		
CO2	1	2		1	1								1		
CO3	1	1	1		1						1		1		
CO4	1	2	1	1							2		1		
CO5	1	1	1	1	1								1		

Course Topics:

Unit-I: PROBABILITY CONCEPTS

Probability distributions – density and distribution functions for uniform, exponential, rezeligh, weibull, normal distribution – Non-maintained systems

Unit-II: RELIABILITY

Definition and its important – method of improving reliability redundancy techniques – failure data analysis – Reliability models – Hazard models – constant, linearly increasing and weibull models estimating of reliability, failure density and MTTF for hazard models

Unit-III: MAINTENANCES SYSTEMS AND ECONOMICS OF RELIABILITY

Maintainability and availability concepts, MTBF, MTTR, MTBM & MDT repair hazard rate, maintainability and availability functions and their mathematical expressions

Unit-IV: MAINTENANCE AND SPARES MANAGEMENT

Preventive replacement- individual breakdown replacement policy – individual preventive replacement policy – preventive group replacement

Unit-V: CONDITION BASED MAINTENANCE

Advantages and disadvantages - vibration monitoring -vibration parameters - vibration instruments

OPEN ELECTIVE (BASIC SCIENCE & MATHEMATICS)

OEE18R008

L	Т	Р	С
3	0	0	3

Course Outcomes:

At the end of the course, the students will be able to

- CO-1: Know the fundamentals of fibre based optical devices
- CO-2: Understand the basic of integrated optical devices
- CO-3: Learn about the opto-electronic devices
- CO-4: Understanding of nanostructured materials
- CO-5: Understanding of quantum devices with applications

Unit – I: Optical Fibre based Devices

Introduction to optical Fibre; Fused single mode fibre directional coupler, Polished single mode fibre directional coupler; Fibrepolariser; Wavelength multiplexer and demultiplexer; Optical fibre switches and intensity modulators; Optical fibre phase modulator; Optical fibre frequency modulator; Optical fibre amplifiers

Unit – II: Integrated Optics based Devices

Optical directional coupler: directional coupler wavelength filter, polarisation splitting directional coupler; Polarisers: leaky mode polariser, metal clad polariser; Phase modulator; Optical switch; Acousto-optic devices : mode converter , tunable wavelength filter, Bragg type modulator , Bragg type deflector; Magneto-optic devices : TE-TM mode converter, modulators and switches, Ti / LiNbO₃ based optical devices.

Unit – III: Optoelectronic Devices

Semiconductor Lasers: homojunction, heterojunction and surface emitting lasers, quantum well lasers; Modulation of lasers; Photodetectors: PIN, Avalanche photodiodes; Optoelectronic modulation and switching devices; Electro-optic Devices; Optoelectronic Integrated circuits; SiO₂ / Si based optoelectronic devices.

Unit – IV: Nanophotonics

Nanocomposites: Nanocomposite Waveguides, Random Lasers, Nanocomposites for optoelectronics-Basics of nano-photonics-Introduction to MEMS and NEMS-Working principles: as micro sensors-biosensors, chemical sensors and optical sensors. MEMS/NEMS applications: Applications in automotive industry-health care- aerospace-industrial product-consumer products.

Unit – V: Quantum Devices

Low-dimensional structures: Quantum wells, Quantum wires, and Quantum dots; Density of states in low-dimensional structures; Resonant tunneling phenomena and applications in diodes and transistors; Applications of quantum devices: quantum well and quantum dot lasers, ultra-fast switching devices, high density memories, dc and rf squids, multi-state logic circuits, long wavelength detectors ; Quantum Computing (Qualitative)

OEE18R009	LASER TECHNOLOGY	L	Т	Р	С
0		3	0	0	3

Course Outcomes:

At the end of the course, the students will be able to

CO-1: An ability to enhance the modern technological aspects in laser

CO-2: To correlate the basic concept of theoretical principles in laser

CO-3: An ability to improve the knowledge of various types of laser

CO-4: Enormous interest to study the various properties of laser.

CO-5: Knowledge of laser applications in various engineering fields

Unit - I: Absorption and Emission of Radiation

Concept of coherence – spatial and temporal - Conditions for Producing Laser - spontaneous and stimulated emission - Population Inversion-different methods- Einstein coefficients – negative absorption – Gain and Gain saturation - Saturation intensity - shape and width of spectral lines.

Unit - II: Threshold Condition and Resonators

Rate equations – optical excitation in three and four level lasers – standing waves in laser – cavity theory – dichroic filter – modes, diffraction theory of the Fabry – Perot interferometer – Types of resonators – stability diagram

Unit - III: Types of Lasers

Principle, construction, working-Gas lasers:He-Ne laser, , CO₂ laser- Liquid lasers: dye lasers, solid state laser: Ruby laser, Nd-YAG laser-applications.

Unit - IV: Ultrafast Photonics and Laser Q Switching

Introduction to ultrashort pulse lasers and amplifiers – wavelength conversion – time-resolved experiments – applications of ultrashort pulses – Mode locking – second harmonic generation – theory and experiment – materials for optical second harmonic generation

Unit - V: Applications

Measurement of distance, velocity, rotation with lasers – laser in communications and computer technology– holography – industrial applications – cutting, drilling & welding – lasers in medicine – laser in research and development

OEE18R006	Industrial Chemistry for Engineers	L	Т	Р	С							
	industrial chemistry for Engineers	3	0	0	3							
Course Outcome(s)												

CO1 To apply the knowledge of electrochemistry to understand the working mechanism of batteries and sensors.

- CO2 To understand the process involved in refining of petroleum, cracking of crude oil and manufacturing of fuel gases and to analyze the flue gas.
- CO3 To understand the process of adsorption and colloidal state of materials.
- CO4 To understand the formulation of protective coatings and to know the process of manufacturing and cleansing action of soaps.
- CO5 To know the constituents, composition and manufacturing process of cement, glass and ceramics.

Unit - I: Energy Storage Devices and Sensors

Batteries - primary and secondary cells. Primary cell - Dry cell, Mercury cell. Secondary cell - Lead acid battery, Lithium battery. Solar cells & fuel cells (H₂-O₂, PEFC and SOFC) - principle, construction, working and application. Electrochemical sensors - working, application and merits.

Unit - II: Fuels and Combustion

Petroleum: Origin, refining, cracking - thermal and catalytic, reforming – thermal and catalytic, knocking and octane number, synthetic petrol - Fischer-Tropsch and Bergius method.

Fuel Gases: Large scale production, storage, hazards and uses of LPG, coal gas, water gas, producer gas, and oil gas. Combustion (Problems). Mass analysis from volume analysis and vice versa. Analysis of flue gas (Orsat's apparatus).

Unit- III: Applications of Adsorption and Colloidal State

Adsorption: Classification of Adsorption – Adsorption of Gases on Solids – Adsorption from Solutions – Applications of Adsorption.

Colloidal state: Types of colloidal solution –Preparation and purification of colloidal solutions – Characteristics of colloidal solution –Coagulation of sols – Origin of charge on colloids – Stability of colloids – Applications of Colloids – Protective colloids – Emulsions – Gels – Micelles.

Unit - IV: Organic Protective Coatings and Soaps

Paints & Varnishes: Requirements of a good paint. Primary constituents of paints, dispersion medium (solvent), binder, pigments, formulation of paints and varnishes.

Soaps: Classification of soap, manufacture of soaps by hot and cold process, cleansing action of soap and classification of detergents (anionic and cationic).

Unit - V: Siliceous Materials

Cement: Manufacture - Wet Process and Dry process, types, analysis of major constituents, setting of cement, reinforced concrete.

Glass: Composition and manufacture of glass .Types of glasses- optical glass, coloured glasses and lead glass.

Ceramics: Types- raw materials - white wares, manufacture and uses.

OEE18R005	COMBINATORICS	L	Т	Р	С
		3	1	0	3

Course Objectives:

To enable the students to understand the concepts of permutation, combination and inclusion and exclusion principle.

Course outcomes:

Upon successful completion of this course, students will be able to

- CO1. understand the rules of sum and product of permutations and combinations.
- CO2. analyze the concepts of pigeonhole principle and its applications.
- CO3. identify solutions by the technique of generating functions
- **CO4**. understand the concepts of Pascal's triangle, the binomial Theorem and unimodality of binomial Coefficients.
- CO5. understand the concepts of the principle of inclusion-exclusion and their applications.

Unit I - Permutations and Combinations

Four Basic Counting Principles, Permutations of sets, Combinations (Subsets) of Sets, Permutations of Multi-sets, Combinations of Multi-sets.

Unit II - The Pigeonhole Principle:

Pigeonhole Principle: Simple Form, Pigeonhole Principle: Strong Form, A Theorem of Ramsey.

Unit III - Generating Permutations and Combinations:

Generating Permutations, Inversions in Permutations, Generating Combinations, Generating r-Subsets.

Unit IV - The Binomial Coefficients:

Pascal's Triangle, The Binomial Theorem, Unimodality of Binomial Coefficients, The Multinomial Theorem, Newton's Binomial Theorem.

Unit V - The Inclusion-Exclusion Principle and Applications:

The Inclusion-Exclusion Principle, Combinations with Repetition, Derangements, Permutations with Forbidden Positions, Another Forbidden Position Problem.

OEE18R003	Mathematical Biology	L	Т	Р	С
		3	1	0	3

Course Objective:

To enable the students to understand the concepts of models for single species, interacting populations and dynamics of marital interaction.

Course Outcomes:

Upon successful completion of this course, students will be able to

CO1: Learn continuous population models for single species

CO2. Learn discrete population models for a single species

CO3. Understand models for interacting populations

CO4. Analyze the various competitive models..

CO5. Model the dynamics of marital interaction.

Unit-I: Continuous Population Models for Single Species

Continuous Growth Models, Insect Outbreak Model: Spruce Budworm, Delay Models. Linear Analysis of Delay Population Models: Periodic Solutions, Real Life Problems related to Growth Model.

Unit-II: Discrete Population Models for a Single Species

Introduction: Simple Models, Cob webbing: A Graphical Procedure of Solution, Discrete Logistic-Type Model: Chaos, Stability, Periodic Solutions. Discrete Delay Models, Tumor Cell Growth.

Unit-III: Models for Interacting Populations

Predator-Prey Models: Lotka-Volterra Systems, Complexity and Stability, Realistic Predator-Prey Models, Analysis of Predator-Prey Model with Limit Cycle, Periodic Behavior: Parameter Domains of Stability.

Unit-IV: Competitive Models

Competition Models: Competitive Exclusion Principle, Mutualism or Symbiosis, General Models and Cautionary Remarks, Threshold Phenomena, Discrete Growth Models for Interacting Populations, Predator- Prey Models : Detailed Analysis.

Unit-V: Modelling the Dynamics of Marital Interaction: Divorce Prediction and Marriage Repair

Psychological Background and Data: Gottman and Levenson Methodology, Maital Typology and Modelling Motivation, Modelling Strategy and the Model Equations, Steady States and Stability.

Text Book:

OEE18R004	MATHEMATICAL MODELLING	L	Т	Р	С
		3	1	0	3

Course Objective:

To make the students to be capable of doing simple mathematical modelling using differential equations and difference equations.

Course Outcomes:

Upon successful completion of this course, Students will be able to

CO1: Understand the mathematical modelling of ordinary differential equation of first order.

CO2: Know about the concepts of mathematical modelling in difference equations and Linear difference equations.

CO3: Know mathematical modelling through partial differential equation and study about the mass-balance equations.

CO4: Know the first and second methods of obtaining partial differential equation models.

CO5: Study about the mathematical modelling through delay differential and functional equations.

Unit I:

Review of ODE and System of First Order ODE - Mathematical modelling in population dynamics-Epidemics through systems of ODE of first order - Mathematical modelling through systems of ordinary differential equations of the first order.

Unit II:

Difference Equation and its solution - Mathematical modelling through difference equations -The need for mathematical modeling through difference equations some simple models-Basic theory of linear difference equations with constant coefficients.

Unit III:

Review of PDE and solution of simple linear PDEs, Mathematical modelling through Partial differential equation -situation giving rise to Partial differential equation models-Mass-balance equations.

Unit IV:

First method of getting Partial differential equation models-Momentum balance equations the second method of obtaining PDE models.

Unit V:

Integral Equations - Solution of Simple Integral Equations - Mathematical modelling through functional Integral , delay differential and differential difference equations.

Text Book:

OPEN ELECTIVE (ENGINEERING STREAM)

MEC19D220 . EINITE EI EMI	L	Т	Р	С				
MECIOR520: FINITE ELEMI	3	0	0	3				
Due neguigites Nil	Course Category: Open Elective							
Pre-requisite: INII	Course Type : Theory							

Course Objective(s):

This course will focus on finite element modelling of structural applications

Course Outcome(s):

CO1	Apply the knowledge of Mathematics and Engineering to solve structural problems
CO1	Apply the concept of numerical methods to find the approximate solution for partial
02	differential equation
	Evaluate the significance of coordinate measurement system for the one dimensional finite
CO3	element problems and using FEA software solve structural application problems such as
	bar, trusses and beam
CO4	Perform numerical and software analysis of two dimensional & axisymmetric structures
CO5	Analyze the isoparametic element formulation using FEM

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	3	3	2									3		1
CO2	3	3	3	2									3		1
CO3	3	3	2	2									3		1
CO4	3	3	2	2									3		1
CO5	3	3	2	2									3		1

Course Topics: Unit-I: INTRODUCTION

Historical background – matrix approach – application to the continuum – Discretization matrix algebra – governing equations for continuum – classical techniques in FEM – weighted residual method – Ritz method

Unit-II: ONE DIMENSIONAL PROBLEMS

Finite element modeling – coordinates and shapes functions potential energy approach – Galerkin approach – assembly of stiffness matrix and load vector – finite element equations– bending of beams – finite element formulation of stiffness matrix and load vectors-one dimensional heat transfer.

Unit-III: TWO DIMENSIONAL PROBLEMS – SCALAR VARIABLE PROBLEMS

Introduction – finite element modeling – scalar valued problem – CST element-stiffness matrix – force vector – stress calculation – temperature effects – applications to scalar variable problems.

Unit-IV: TWO DIMENSIONAL PROBLEMS – VECTOR VARIABLE PROBLEMS

Vector variable problems – elasticity equation – plain stress and strain - Axisymmetric formulation – element stiffness matrix and force vector - boundary conditions – applications to cylinders under internal or external pressures – rotating discs.

Unit-V: ISOPARAMETRIC ELEMENTS FORMULATION

The four node quadrilateral – shape functions – element stiffness matrix and force vector numerical integration – Gaussian quadrature – Examples –uses of FEA software.

MEC19D221 . ODTIMIZATIO	L	Т	Р	С				
WIECIORS21: OF HIVITZATIO	3	0	0	3				
Due neguisites Nil	Course Category: Open Elective							
rre-requisite: INII	Course Type : Theory							

Course Objective(s):

This course will focus on mathematical modelling. Strong emphases will begiven to model formulation

Course Outcome(s):

CO1	Explain the Formulation & Solving of non – linear programming.
CO2	Demonstrate the Unconstrained optimization
CO3	Ability to apply the Nonlinear Equations
CO4	Apply Constrained optimization methods
CO5	Contrast the recent techniques in optimization

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3				2			1					2		
CO2	1	1			1								2		
CO3	2			3	3								2		
CO4		2	3		2								2		
CO5	3		3	1	2								2		

Course Topics:

Unit-I: INTRODUCTION TO OPTIMIZATION

Classification of optimization problems - applications of optimization - concepts of design vector- design constraints - constraint surface - objective function surfaces and multi -level optimization - quadratic programming- non-linear programming – unconstrained optimization techniques- basics of constrained optimization.

Unit-II: UNCONSTRAINED OPTIMIZATION

Steepest-descent method-Newton methods - Quasi-Newton methods- linear/nonlinear conjugate gradient methods-interval reduction methods- line-search methods- trust-region methods-local and global convergence.

Unit-III: NONLINEAR EQUATIONS

Newton's method - modified Newton's methods; Brayden's (quasi-Newton) method-Inexact Newton methods - the bisection method - line-search methods and merit functions- trust - region methods- local and global convergence.

Unit-IV: CONSTRAINED OPTIMIZATION

Lagrange multipliers- Karush - Kuhn-Tucker conditions - line-search methods and merit functions activeset methods (for inequality constraints) - penalty function methods (for equality constraints) - reduced-gradient and gradient-projection methods - augmented Lagrangian and projected Lagrangian methods - Barrier methods (for inequality constraints) - interior-point methods (for inequality constraints) - sequential linearly constrained programming- sequential quadratic programming.

Unit-V: RECENT TECHNIQUES IN OPTIMIZATION

Convexity; linear programming, simplex and duplex method- quadratic programming- duality-nonlinear least-squares problems-variational calculus- nonsmooth optimization-dynamic optimization and the maximum principle of pontryagin- dynamic programming and the Hamilton- Jacobi-Bellman equation neural networks and

the back propagation algorithm- stochastic optimization- simulated annealing- genetic algorithms- neural network based optimization- optimization of fuzzy systems – introduction to use of mat lab and other software used in optimization.

MEC19D222 · MATEDIALS N	L	Τ	Р	С					
WIEC IOR525 : WIATERIALS N	3	0	0	3					
Bue negovicites Nil	Course Category: Open Elective								
rre-requisite: 1011	Course Type : Theory								

Course Objective(s):

To impart knowledge to provide the participant with various types of managerial activities in different management related functions

Course Outcome(s):

CO1	Illustrate the various functions of Materials Management.
CO2	Comprise the Methods of purchasing and Cost Analysis techniques.
CO3	Identify the functions of stores management and Material handling.
CO4	Interpret various deterministic and probabilistic models of inventory management systems.
CO5	Inspect the material requirement planning in the various systems of value analysis.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	1	1	1				2			2	2	2		
CO2	2	1	2					1		1	1	2	2		
CO3	2	1	1			1	2	2			1	1	2		
CO4	2				2										
CO5	2				2			2			1	1	1		

Course Topics:

Unit-I: FUNCTIONS OF MATERIALS MANAGEMENT

Introduction - objectives - organizations - functions - administration - integrated approach - relationship with other department-make or buy decision- buying process.

Unit-II: PURCHASING MANAGEMENT

Purchasing policies and procedures - legal aspects - selection of sources of supply - forms and records - methods of purchasing - capital purchasing ethics-vendor evaluation and rating, cost analysis

Unit-III: STORES MANAGEMENT

Store function - location - layout - materials handling and movement -stock taking-procedures and records – ABC and VED system of stock control-ware housing and distribution management

Unit-IV: INVENTORY MANAGEMENT

EOQ - inventory systems - periodic - deterministic and probabilistic models - static inventory model - reorder point - lead time analysis - safety stocks-ABC analysis

Unit-V: VALUE ANALYSIS

Standardization - variety reduction - JIT - MRP I, MRP II - vender evaluation and rating - inventory audit and information systems.

MEC19D244 - NUCLEAD DOWN	L	Т	Р	С						
WIECION344: NUCLEAR FUW	3	0	0	3						
Due veguisites Nil	Course Category: Open Elective									
Fre-requisite: 1011	Course Type : Theory									

Course Objective(s):

To learn the nuclear power generation technique and its safety aspects.

Course Outcome(s):

CO1	Identify the different type of nuclear reactions and its applications.
CO2	Compare various nuclear reactors with working principle.
CO3	Summarize the various nuclear materials used for power generation.
CO4	Interpret the nuclear waste disposal process and its effects on environment.
CO5	Discuss the safety aspects to be followed in nuclear power plant.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	2										2	3		
CO2	3	2										2	2	2	
CO3	3	2										1	2	1	
CO4	2	2				2	2					1	2	1	
CO5	2	2				3	3					2	2	1	

Course Topics:

Unit-I: INTRODUCTION TO NUCLEAR ENGINEERING

Introduction, Why Nuclear Power for Developing Countries, Atomic Nuclei, Atomic Number and Mass Number, Isotopes, Atomic Mass Unit, Radioactivity and Radioactive Change Rate of Radioactive Decay, Mass – Energy Equivalence, Binding Energy, Release of Energy by Nuclear Reaction, Types of Nuclear Reactions, Initiation of Nuclear Reaction, Nuclear Cross Section, Nuclear Fission, The Fission Chain Reaction, Moderation, Fertile Materials and Breeding

Unit-II: NUCLEAR REACTORS

Introduction, General Components of Nuclear Reactor, General Problems of Reactor Operation, Different Types of Reactors, Pressurised Water Reactors(PWR), Boiling Water Reactors (BWR), Heavy Water – cooled and Moderated CANDU (Canadian Deuterium Uranium) Type Reactors, Gas-Cooled Reactors, Breeder Reactors, Reactor Containment Design, Location of Nuclear Power Plant, Nuclear Power Station in India, India's 3-stage Programme for Nuclear Power Development Comparison Nuclear Plants with Thermal Plants.

Unit-III: NUCLEAR MATERIALS

Introduction, Fuels, Cladding and Materials Coolants, Moderating and Reflecting Materials, Control Rod Materials, Shielding Materials.

Unit-IV: NUCLEAR WASTE & ITS DISPOSAL

Introduction, Unit of Nuclear Radiation, Types of Nuclear Waste, Effects of Nuclear Radiation, Radioactive Waste Disposal System, Gas Disposal System.

Unit-V: SAFETY RULES

Personal Monitoring, Radiation Protection (Radiation Workers, Non-Radiation workers, Public at large), Radiation Dose (Early effect, late effect hereditary effect)

Text Book(s):

- 1. P.K. Nag, "Power Plant Engineering", Edition: 4, Tata McGraw Hill, 2017.

MEC19D245 · SUDEACE EN	L	Т	Р	С					
MECIOR545 : SURFACE EI	3	0	0	3					
Bue neguiaite. Nil	Course Category: Open Elective								
Pre-requisite: Mil	Course Type : Theory								

Course Objective(s):

The aim of this course to understand the surface cleaning and coating technology

Course Outcome(s):

CO1	Evaluate the aspects of surface engineering over a range of surface cleaning processes.
CO2	Identify the different type of resistant coatings deposited by electrochemical process.
CO3	Knowing the erosion, resistant coatings deposited by chemical vapour deposition and physical vapour deposition.
CO4	Preparing corrosion resistant surfaces by plating and nano composite coatings.
CO5	Interpret the measurement of surfaces, wear mechanisms, tribological induced stresses.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	1											2		
CO2	2	3											1		
CO3	2	2											1		
CO4	2	3											1		
CO5	2	2		2									1		

Course Topics:

Unit-I: METAL CLEANING & PREVIEW ON SURFACE ENGINEERING

Need and relevance of surface engineering – pre-treatment of coating, General cleaning process for ferrous and non-ferrous metals and alloys – selection of cleaning process – alkaline cleaning – emulsion cleaning- ultrasonic cleaning – acid and pickling salt bath descaling – abrasive bath cleaning – polishing and short peening – classification of surface engineering processes.

Unit-II: THERMAL SPRAYING PROCESSES AND ELECTRODEPOSITED COATINGS

Thermal spraying – flame, arc, plasma and HVOF processes – PLV process – design for thermally sprayed coatings – coating production – spray consumables principles of electroplating – Technology and control electroplating systems – properties and Faraday's Law – factors affecting throwing power – Applications of electro deposit – non-aqueous and electro-less deposition.

Unit-III: HOT DIP COATING AND DIFFUSION COATINGS

Principles – surface preparation batch coating and continuous coating process – coating properties and applications, Principles of cementation – cladding – Diffusion coating of C.N. Al, Si, Cr and B – structure, properties and application of diffusion coatings – chemical vapour deposition – physical vapour deposition.

Unit-IV: NON-METALLIC COATING OXIDE & COVENSION COATINGS

Plating coating – rubbers and elastomers – vitreous enamels – anodizing phosphating and chromating – application to aluminium, magnesium, tin, zinc, cadmium copper and silver – phosphating primers.

Unit-V: QUALITY ASSURANCE, TESTING & SELECTION OF COATINGS

The quality plan – design – testing and inspection of thickness adhesion, corrosion, resistance and porosity measurement – selection of coatings – industrial applications of engineering coatings. Basic mechanisms of

wear – abrasive, adhesive wear, contact fatigue – fretting corrosion – testing wear resistance practical diagnosis of wear.

Text Book(s):

MEC19D246 . THEDMODVNAMI	L	Τ	Р	С					
WIECIOK540: I HERWIOD I NAWI	3	0	0	3					
Due neguisite. Nil	Course Category: Open Elective								
rre-requisite: 1011	Course Type : Theory								

Course Objective(s):

Classical and statistical thermodynamics; entropy and energy functions in liquid and solid solutions and their applications to phase equilibrium

Course Outcome(s):

CO1	Familiarize the basic concepts of thermodynamics with both classical and statistical
COI	approach.
CO2	Illustrate the thermal behavior of solid materials, including phase transitions.
CO3	Exploit thermodynamics to describe the thermal behavior of solid materials.
CO4	Interpret the acquired knowledge in the thermodynamic properties of materials.
CO5	Predict the use of thermodynamics in phase change material and interpret simple phase
05	equilibrium

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	1		1								2	2		
CO2	2	1										2	2		
CO3	2	1										2	2		
CO4	2	1				1						2	2		
CO5	2	2		1								2	2		

Course Topics:

Unit-I: BASIC CONCEPT & LAWS OF THERMODYNAMICS

Heterogeneous & homogeneous systems, Extensive & intensive properties, Simple equilibrium, First law of thermodynamics, constant volume & constant pressure processes, Spontaneous process, Entropy quantification of irreversibility, Properties of heat engines, Second law of thermodynamics, Criterion for equilibrium, Entropy & disorder, most probable microstate, configurational entropy & thermal entropy, Auxiliary functions

Unit-II: PROPERTIES OF PURE SUBSTANCES

Properties of pure substances – thermodynamic properties of pure substances in solid, liquid and vapour phases, phase rule, P-V, P-T, T-V, T-S, H-S diagrams, PVT surfaces, and thermodynamic properties of steam

Unit-III: THERMODYNAMIC RELATIONS

Free energy functions and their relationships, Gibbs-Helmholtz relations, Maxwell relations, Clausius-Clapeyron equation, importance of thermodynamics in materials science-illustrations and examples; applications in areas of materials technology, industrial and process metallurgy

Unit-IV: THERMAL PROPERTIES OF MATERIALS

Specific heat - Debye and other models, heat capacity, thermal expansion, thermal conduction, thermal stress and shock, melting point, advanced thermodynamic treatment of inorganic materials, Application of the laws of thermodynamics to the chemical behavior of materials, multi component systems, phase and chemical reactions equilibrium, Thermodynamics of phase transformations

Unit-V: PHASE CHANGE MATERIAL

Sensible –Latent heat energy, Types of Phase Change Material, Encapsulation, Composite PCM, Application of Phase Change Material – Buildings, Air conditioning, Textiles, Solar water heating, Space heating/cooling, Green house heating, Selection of PCM for application, Material testing, Method of Analysis

CO4	2	2	2		2			1				2	2	2	1
CO5	2	2										2	2	2	

Course Topics: Unit-I:INTRODUCTION

Introduction; Design considerations – Material, Size, Resolution, Process; Modeling and viewing - 3D; Scanning; Model preparation – Digital; Slicing; Software; File formats

Unit-II:PRINCIPLE

Processes – Extrusion, Wire, Granular, Lamination, Photo polymerisation; Materials - Paper, Plastics, Metals, Ceramics, Glass, Wood, Fiber, Sand, Biological Tissues, Hydrogels, Graphene; Material Selection - Processes, applications, limitations

Unit-III:INKJET TECHNOLOGY

Printer - Working Principle, Positioning System, Print head, Print bed, Frames, Motion control; Print head Considerations – Continuous Inkjet, Thermal Inkjet, Piezoelectric Drop-On-Demand; Material Formulation for jetting; Liquid based fabrication – Continuous jet, Multi jet; Powder based fabrication – Color jet

Unit-IV:LASER TECHNOLOGY

Light Sources – Types, Characteristics; Optics – Deflection, Modulation; Material feeding and flow – Liquid, powder; Printing machines – Types, Working Principle, Build Platform, Print bed Movement, Support structures

Unit-V:INDUSTRIAL APPLICATIONS

Product Models, manufacturing – Printed electronics, Biopolymers, Packaging, Healthcare, Food, Medical, Biotechnology, Displays; Open source; Future trends

ΜΕC19D249.ΜΑΙΝΤΕΝΙΑΝΟΕ	L	Т	Р	C						
WIECION340:WAINTENANCE	3	0	0	3						
Dre requisiter Nil	Course Category: Open Elective									
Pre-requisite: NII	Course Type : Theory									

Course Objective(s):

The aim of undergoing this course is to understanding the basic topics in Maintenance Engineering and its application in industry.

Course Outcome(s):

CO1	Elucidate the principles, functions and practices adapted in industry for the successful
COI	management of maintenance activities.
CO2	Explain the concepts of Preventive maintenance and maintenance schedules.
CO3	Make use of Condition monitoring process with the simple instruments used in
CUS	Industry.
CO4	Ability to interpret the failures and implement the repair methods for basic machine
CU4	elements
CO5	Examine the failures and implement the repair methods for Material Handling Equipments.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	1				2			1		1		1	1	
CO2	2	1		1							2			1	
CO3			1				1							2	
CO4	1	2		2		1		2	1		2		1	1	
CO5								2					1	1	

Course Topics:

Unit-I:PRINCIPLES AND PRACTICES OF MAINTENANCE PLANNING

Basic Principles of maintenance planning – Objectives: and principles of planned maintenance activity – Importance and benefits of sound Maintenance systems – Reliability and machine availability – MTBF, MTTR and MWT – Factors of availability – Maintenance organization – Maintenance economics.

Unit-II:MAINTENANCE POLICIES – PREVENTIVE MAINTENANCE

Maintenance categories – Comparative merits of each category – Preventive maintenance, maintenance schedules, repair cycle - Principles and methods of lubrication – TPM

Unit-III: CONDITION MONITORING

Condition Monitoring – Cost comparison with and without CM – On-load testing and off-load testing – Methods and instruments for CM – Temperature sensitive tapes – Pistol thermometers – wear- debris analysis

Unit-IV:REPAIR METHODS FOR BASIC MACHINE ELEMENTS

Repair methods for beds, slideways, spindles, gears, lead screws and bearings – Failure analysis – Failures and their development – Logical fault location methods – Sequential fault location

Unit-V:REPAIR METHODS FOR MATERIAL HANDLING EQUIPMENT

Repair methods for Material handling equipment - Equipment records –Job order systems - Use of computers in maintenance.

MEC19D240.SMADT M	L	Τ	Р	С						
WIECTOR549:SWIART WI	3	0	0	3						
Bro requisiter Nil	Course Category: Open Elective									
Pre-requisite: Mi	Course Type : Theory									

Course Objective(s):

The aim of undergoing this course is to develop basic principles and mechanisms of smart materials, devices and provides a spring board for further study.

Course Outcome(s):

CO1	Demonstrate knowledge and understanding of the physical principles underlying the behaviour of smart materials.
CO2	Describe the basic principles and mechanisms of the stimuli-response for the most important smart materials.
CO3	Demonstrate knowledge and understanding of the engineering principles in smart sensors, actuators and transducer technology.
CO4	Propose improvement and establishment of Smart composites on the design, analysis, manufacturing and application issues.
CO5	Integrating smart materials and devices with signal processing and control capabilities to engineering smart structures and products.

Mapping of Course Outcome(s):

-															
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	2		2		1					2	1			
CO2	3	2	2									1	2	2	
CO3	2	3		3	3								3	2	1
CO4	2	3		2	2						2		2		
CO5	2	2			3	1						1		2	

Course Topics:

Unit-I:OVERVIEW OF SMART MATERIALS

Introduction to Smart Materials, Principles of Piezoelectricty, Piezoceramic Materials, Single Crystals vs Polycrystalline Systems, Piezoelectric Polymers, Principles of Magnetostriction, Rare earth Magnetostrictive materials, Giant Magnetostriction and Magneto-resistance Effect, - Introduction to Electro-active Materials, Electronic Materials, Electro-active Polymers, Ionic Polymer - Matrix Composite (IPMC)-Shape Memory Alloys- Shape Memory Polymers- Shape Memory Effect-Electroactive polymers (EAP)-Work Volume Generation

Unit-II:HIGH-BAND WIDTH-LOW STRAIN SMART MATERIALS

Piezoelectric materials-constitutive relationship, coupling coefficients, constants, materials, Variation of coupling coefficients in hard and soft piezo-ceramics, polycrystalline vs single crystal piezoelectric materials, polyvinyldene fluoride, piezoelectric composites- Sensors Magnetostrictive materials-constitutive relationship, coupling coefficients, joule effect, villari effect, matteuci effect, wiedemann effect, gaint magnetostriction in terfenol-d, terfenol-D particulate composites, galfenol and metglas materials- Sensors

Unit-III:DESIGN OF SMART ACTUATORS AND SENSORS

Actuator Techniques – Actuator and actuator materials – Piezoelectric and Electrostrictive Material – Magnetostructure Material — Finite Element Modelling- Optimal placement of sensors and actuators-Piezoelectric Strain Sensors, In-plane and Out-of Plane Sensing, Shear Sensing, Accelerometers, Effect of

Electrode Pattern, Active Fibre Sensing, Magnetostrictive Sensing- design of controller for smart structure- case study for advanced smart materials.

Unit-IV:SMART COMPOSITES

Review of Composite Materials, Micro and Macro-mechanics, Modelling Laminated Composites based on Classical Laminated Plate Theory, Effect of Shear Deformation, Dynamics of Smart Composite Beam, Governing Equation of Motion, and Finite Element Modelling of Smart Composite Beams.

Unit-V:DESIGN OF SMART SYSTEMS AND APPLICATIONS

Self-Sensing Piezoelectric Transducers, Energy Harvesting Materials, Artophagous Materials, Self-Healing Polymers, Intelligent System Design, Emergent System Design– practical applications - case study

WIECION35U:A	3	0	0	3						
Due neguigite. Nil	Course Category:Open Ele	ective								
Pre-requisite: NII	Course Type : Theory	Course Type : Theory								

Course Objective(s):

The aim of undergoing this course is to impart fundamentals of avionics and the various systems pertaining to avionics.

Course Outcome(s):

CO1	Illustrate the needs of various avionics systems and sub-systems.
CO2	Construct various avionics system architecture.
CO3	Demonstrate various technologies of flight decks and cockpits.
CO4	Categorize the navigation systems and sensors.
CO5	Elucidate the principles of autopilot and analyze various air data systems.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	2	2	2									2		
CO2	2		3		2									2	3
CO3	3	3		2	2	2		2							3
CO4	2	3	3	2	2									3	2
CO5	3	2		1	2			2					3		2

Course Topics:

Unit-I:INTRODUCTION TO AVIONICS

Need for avionics in civil and military aircraft and space systems – Integrated avionics and weapon systems – Typical avionics subsystems, design, technologies – Introduction to Digital Computer and memories.

Unit-II:DIGITAL AVIONICS ARCHITECTURE

Avionics system architecture – Data buses – MIL-STD-1553B – ARINC – 420 – ARINC – 629.

Unit-III:FLIGHT DECKS AND COCKPITS

Control and display technologies: CRT, LED, LCD, EL and plasma panel – Touch screen – Direct voice input (DVI) – Civil and Military Cockpits: MFDS, HUD, MFK, HOTAS.

Unit-IV:INTRODUCTION TO NAVIGATION SYSTEMS

Radio navigation – ADF, DME, VOR, LORAN, DECCA, OMEGA, ILS, MLS – Inertial Navigation Systems (INS) – Inertial sensors, INS block diagram – Satellite navigation systems – GPS.

Unit-V:AIR DATA SYSTEMS AND AUTO PILOT

Air data quantities – Altitude, Air speed, Vertical speed, Mach number, Total air temperature, Mach warning, Altitude warning – Auto pilot – Basic principles, Longitudinal and lateral auto pilot.

Text Book(s):

- 1. Albert Helfrick, "Principles of Avionics", Edition:7, Avionics Communications Inc, 2012.

MEC19D402-MECHAT	L	Τ	Р	С					
MECIOR405:MECHA	3	1	0	3					
Bue meanicite. Nil	Course Category: Open Elective								
rre-requisite:1011	Course Type : Theory								

Course Objective(s):

The aim of undergoing this course is to educate students about an integrated approach for the design of complex engineering systems and to provide knowledge of sensors, actuators and enabling the students to apply the same in the real time problems.

Course Outcome(s):

CO1	Recognize the basic elements of Measurement and Control Systems.
CO2	Identify the various sensors and transducers for a wide range of mechanical applications
CO3	Make use of 8085 microprocessor for a variety of domestic and industrial applications.
CO4	Examine the function of Programmable Logic Controllers for Mechanical applications.
CO5	Build a Mechatronics system for domestic applications.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	1		3			2			2						3
CO2	2	2	2				1				3	1	2	2	
CO3			3	2	3									3	2
CO4		2	3		2									3	3
CO5		3	3		3									3	1

Course Topics:

Unit-I:INTRODUCTION TO MECHATRONICS

Introduction to Mechatronics systems - measurement systems-control systems-types-automatic control systemmicroprocessor based control system- Introduction of bio mechanics, Bio-micro electrical mechanical system

Unit-II:SENSORS AND TRANSDUCERS

Introduction-performance terminology-displacement, position and proximity-velocity and motion fluid pressure-temperature sensors-light sensors-selection of sensors.

Unit-III:8085 MICROPROCESSOR

Introduction – architecture - pin configuration - instruction set - programming of microprocessors using 8085instructions-interfacing input and output devices-interfacing D/A converters and A/D converters applications-temperature control-stepper motor control-traffic light controller-digital logic control-review of number system-code conversion-Boolean algebra.

Unit-IV:PROGRAMMING LOGIC CONTROLLERS

Introduction-basic structure-input / output processing-programming - mnemonics-timers, internal relays and counters-data handling-analog input/output-selection of a PLC.

Unit-V:DESIGN OF MECHATRONIC SYSTEMS

Stages in designing mechatronic systems - traditional and mechatronic design -possible design solutions-case studies of mechatronic systems - pick and place robot - automatic car park system engine management system

MEC19D427.ENTEDDDISE DES(L	Т	Р	С						
WIEC10R42/:ENTERFRISE RES	3	0	0	3						
Dre requisiter Nil	Course Category: Open Elective									
re-requisite: Mi	Course Type : Theory									

Course Objective(s):

The aim of undergoing this course is to provide an integrated and continuously updated view of core business processes using common databases maintained by a database management system.

Course Outcome(s):

CO1	Define the concepts of ERP and its framework.
CO2	Explain the technologies and its architecture in CRM process
CO3	Apply the different types of activities of ERP project management cycle and packages
CO4	Analyze the application and various training module ERP packages
CO5	Evaluate the ERP Procedurement Issues in Indian companies.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1					3						3				3
CO2	3		1		1						2				2
CO3			1												
CO4	3		2												
CO5					3						1				1

Course Topics:

Unit-I:ENTERPRISE RESOURCE PLANNING

Principle – ERP framework – Business Blue Print – Engineering vs Business process Re Engineering – Tools – Languages – Value chain – Supply and Demand chain – Extended supply chain management – Dynamic Models – Process Models

Unit-II:TECHNOLOGY AND ARCHITECTURE

Client/Server architecture – Technology choices – Internet direction – Evaluation framework – CRM – CRM pricing – chain safety – Evaluation framework.

Unit-III:ERP SYSTEM PACKAGES

SAP, People soft, Baan and Oracle – Comparison – Integration of different ERP applications – Before and after Y2k – critical issues – Training on various modulus of IBCS ERP Package – Oracle ERP and MAXIMO, including ERP on the NET

Unit-IV:ARCHITECTURE

Overview – Architecture – AIM – applications – Oracle SCM, SAP: Overview – Architecture – applications – Before and after Y2k _ critical issues – Training on various modules of IBCS ERP Packages –Oracle ERP and MAXIMO, including ERP on the NET

Unit-V:ERP PROCEDUREMENT ISSUES

Market Trends – Outsources ERP – Economics – Hidden Cost Issues – ROI – Analysis of cases from five Indian Companies

Text Book(s):

MEC18R428:PRODUCTIVITY MAI	L	Τ	Р	С					
ENGINEERIN	3	0	0	3					
Bro requisiter Nil	Course Category: Open Elective								
rre-requisite: 1111									

Course Objective(s):

The aim of undergoing this course is to develop basics production operations and management and the concepts and tools of re-engineering in production.

Course Outcome(s):

CO1	Explain the influencing factors of productivity and its cycle with the tools involved in its
COI	measurement.
CO2	Summarize the different systematic approaches for productivity measurement.
CO3	Apply the concepts of organizational transformation and re-engineering.
CO4	Analyze and compare various models for process improvement.
CO5	Apply the analytical tools for re-engineering.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	1	2										2	1		
CO2	1					1				2	2				
CO3	1			1						2	1	1	1		
CO4	2	1	1	3						1	1	1	2	1	
CO5	1	2		2						1	1	1	1		

Course Topics: Unit-I:PRODUCTIVITY

Productivity Concepts – Macro and Micro Factors of Productivity – Dynamics of Productivity – Productivity Cycle Productivity at International, National and Organization Level – Productivity Measurement models

Unit-II:SYSTEM APPROACH TO PRODUCTIVITY MEASUREMENT

Conceptual frame work, Management by Objectives (MBO), Performance Objectives Productivity (POP) – Methodology and application to manufacturing and service sector

Unit-III:ORGANISATIONAL TRANSFORMATION

Element of Organizational Transformation and Re-engineering – Principles of Organizational transformation and re-engineering, fundamentals of process re-engineering, preparing the work force for transformation and reengineering, methodology, guidelines, LMI CIP Model – DSMC Q & PMP model.

Unit-IV:RE-ENGINEERING PROCESS IMPROVEMENT MODELS

PMI models, PASIM Model, Moen and Nolan Strategy for process improvement, LMICIP Model, NPRDC Model.

Unit-V:RE-ENGINEERING TOOLS AND IMPLEMENTATION

Analytical and process tools and techniques – information and communicational technology – implementation of Re engineering project – success factor and common implementation problem – cases.

Text Book(s):

MEC19D422.DDODUCT I IEE CV	L	Т	Р	С						
MECIOR452:FRODUCT LIFE CIC	3	0	0	3						
	Course Category: Open Ele	ective								
Pre-requisite: NIL	Course Type : Theory									

Course Objective(s):

This course will enhance your knowledge and skills in the life cycle of industrial products and current issues in the product portfolios according to global industry and market shifts.

Course Outcome(s):

CO1	Identify the import components and strategy of PLM.
CO2	Analysis the product life cycle management with various tools and techniques.
CO3	Explain the importance and workflow of PDM.
CO4	Summarize the various product analysis tools used in PLM.
CO5	Interpret the recent advancement in PLM and its applications.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	2								1	2		3	1	
CO2	2	2	2			1	2			2	2		3		
CO3	2	2								1	2		2		
CO4	2	2	2				2			2	1		2	2	
CO5	2	2				1	1			1	1		3	2	

Course Topics:

Unit-I:INTRODUCTION TO PRODUCT LIFE CYCLE MANAGEMENT(PLM)

Background, Overview, Need, Benefits, Concept of Product Life Cycle. Components of PLM, Emergence of PLM, Significance of PLM, Customer Involvement, Product Data and Product Workflow, Company's PLM vision, The PLM Strategy, Principles for PLM strategy, Preparing for the PLM strategy, Strategy identification and selection, Change Management for PLM.

Unit-II:CONSTRUCTING PRODUCT LIFE CYCLE MANAGEMENT

PLM Life cycle model – Plan, design, build, support & dispose. Threads of PLM- Computer Aided Design(CAD), Engineering Data Management(EDM). Product Data Management(PDM). Computer Integrated Manufacturing(CIM). Weaving the threads in to PLM, Comparison of PLM to Engineering Resource Planning(ERP). PLM characteristics-Singularity, Cohesion, Traceability, Reflectiveness.

Unit-III:PRODUCT DATA MANAGEMENT (PDM) PROCESS AND WORKFLOW

PDM systems and importance, reason for implementing a PDM system, financial justification of PDM implementation. Versioning, check-in and checkout, views, Metadata, Lifecycle, and workflow. Applied problems and solution on PDM processes and workflow.

Unit-IV:PRODUCT ANALYSIS TOOLS

Design for manufacturing - machining - casting and metal forming - optimum design - Design for assembly and disassembly - probabilistic design concepts - FMEA - QFD - Taguchi Method for design of experiments - Design for product life cycle. Estimation of Manufacturing costs, Reducing the component costs and assembly costs, Minimize system complexity.

Unit-V:RECENT ADVANCES IN PLM

Intelligent Information Systems - Knowledge based product and process models - Applications of soft computing in product development process. Digital manufacturing, benefits manufacturing, manufacturing the first-one, Ramp up, virtual learning curve, manufacturing the rest, production planning.

Text Book(s):

- 1. Michael Grieves, "Product Lifecycle Management", Edition: 1, McGraw-Hill, 2005.
- 2. Rodger Burden, "PDM: Product Data Management", Edition:1, Resource Pub, 2003.

WIECIOK440:DASIC WIA	3	0	0	3	
Bue no anicita. Nil	Course Category: Open Ele	ective			
Pre-requisite:1011	Course Type : Theory				

Course Objective(s):

The aim of undergoing this course is to develop basic understanding of the topics in Mechanical Engineering

Course Outcome(s):

CO1	Summarize the various metal cutting tools and its nomenclature.
CO2	Discuss the features, operations of Centre lathe, Capstan and turret lathe and automatic
02	lathe.
CO3	Illustrate the various processes involved in milling machines.
CO4	Describe the principles of Gear Cutting machines.
CO5	Interpret the concepts involved in Abrasive and Broaching Processes.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	2	2	3	2	1	2					1	3		
CO2	3	2	2	2	2	1							3	2	
CO3	3	2	2	2	2	1							3	2	
CO4	3	2	2	2	2	1	2						3	2	2
CO5	3		2	2	3	1	1						3	2	3

Course Topics:

Unit-I:METAL CUTTING THEORY

Mechanics of chip formation, single point and multi point cutting tools, forces in machining, Types of chip, cutting tools – nomenclature, orthogonal metal cutting, thermal aspects, cutting tool materials, tool wear, tool life, surface finish, cutting fluids and machinability, economics in machining.

Unit-II:TURNING MACHINES

Centre lathe, constructional features, specification, operations – taper turning methods, thread cutting methods, special attachments, machining time and power estimation. Capstan and turret lathes- tool layout – automatic lathes: semi automatic – single spindle: Swiss type, automatic screw type – multi spindle

Unit-III: RECIPROCATING, MILLING MACHINES

Reciprocating machine tools: shaper, planer, slotter: Types and operations- Hole making: Drilling, reaming, boring, Tapping, Milling operations-types of milling cutter –attachments machining time calculations.

Unit-IV:GEAR CUTTING MACHINES

Gear cutting – forming and generation principle, gear milling, hobbing and gear shaping – micro finishing methods

Unit-V:ABRASIVE AND BROACHING PROCESSES

Abrasive processes: grinding wheel – specifications and selection, types of grinding process – cylindrical grinding, surface grinding, centreless grinding, internal grinding- micro finishing methods - Typical applications – concepts of surface integrity, broaching machines: broach construction – push, pull, surface and continuous broaching machines

Text Book(s):

MEC19D441-SUDDI V CHAIN	L	Т	Р	С						
MECIOR441:SUFFL1 CHAIN	3	0	0	3						
Dre requisiter Nil	Course Category: Open Elective									
Pre-requisite: NII	Course Type : Theory									

Course Objective(s):

The aim of undergoing this course is to develop basic understanding the topics in the field of management and engineering goods.

Course Outcome(s):

CO1	Illustrate the various functions of supply chain network and customer strategies.
CO2	Recognize the need of decision making in supply chain management and its build-up
02	techniques.
CO2	Summarize the concept of supply chain management, uncertainty in supply chain and
005	material handling procurement.
004	Interpret the role of transportation in supply chain with decision support models and supply
CO4	management.
COF	Reproduce the concepts in supply chain automation and distribution policies and plans in
005	IT sectors.

Mapping of Course Outcome(s):

		0													
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CO2	2	2						2	2		2	1	2		
CO3	2	2						2	2		1	1	2		
CO4	2							1			1				
CO5	2	1						1			1	2	2	1	

Course Topics:

Unit-I:INTRODUCTION

Building Blocks of a Supply Chain Network - Business Processes In Supply Chains - Types of Supply Chains and Examples – Supply Chain Drivers- Role of Supply Chain Management- Scope and Importance.-Customer Driver Strategies.

Unit-II:SUPPLY CHAIN INVENTORY MANAGEMENT

Strategic, Tactical, and Operational Decisions in Supply Chains - Supply Chain Performance Measures - Supply Chain Inventory Management – Demand Forecasting – Impact of Uncertainty of Supply In Safety Inventory – Managing Safety Inventory In Multi Echelon Supply Chains - Bullwhip Effect Ware house Design-Distribution Policies- Transhipment Information Systems-Planning And Managing Inventories In A Supply Chain

Unit-III:SOURCING DECISION IN SUPPLY CHAIN MANAGEMENT

Role of Sourcing – In-House Sourcing and Outsourcing – Third Party Logistics – Supplier Relation – Procurement Processes – Risk Management In Sourcing-, Inventory-Order Processing- Purchasing Ware housing- Materials Handling- Packaging-Customer Service Management--Impact of Supply Uncertainty Aggregation And Replenishment.

Unit-IV:TRANSPORTATION IN SUPPLY CHAIN MANAGEMENT

Role of Transportation – Modes – Design Option For A Transportation Network – Trade Off In Transportation Design- Logistics and Competitive Strategy; System View, Co-Ordination and Management of Transportation-

International Logistics-Ocean Carrier Management- Import Export Logistic Management- Decision Support Models Of Supply Chain Management.

Unit-V:SUPPLY CHAIN AUTOMATION AND ITS ADVANCEMENT

IT Enabled Supply Chains – Role of IT in Forecasting, Inventory Management, Procurement, Transportation - Customer Relationship Management - ERP and Supply Chains - Supply Chain Automation and Supply Chain Integration-- Marketing and Supply Chain Interface-Finance and Supply Chain Interface-Distribution Policies and Plans-Revenue Management.

Text Book(s):

MECIOR442: DASICS OF HE	3	0	0	3				
Pre-requisite: Click or tap here to enter	Pre-requisite: Click or tap here to enter Course Category: Choose a							
text.	text. Course Type : Theory							

Course Objective(s):

Enable the students to understand the basic concepts of heat transfer

Course Outcome(s):

CO1	Apply knowledge on conduction heat transfer and perform its calculations.
CO2	Solve forced convection real time problems
CO3	Solve free convection real time problems
CO4	Examine the factors influencing radiation heat transfer
CO5	Analyze the performance of the heat exchangers

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	1	2	2									2	1	1	
CO2	2	1		1									1	1	
CO3	2	1		1									1	1	
CO4	2	1		1									1	1	
CO5	1	1	1	1	1								2	1	

Course Topics: Unit-I:CONDUCTION

Introduction to Heat Transfer, Modes of Heat Transfer, Material properties of importance in heat transfer, Thermal conductivity, Specific heat capacity, One Dimensional:-Steady state conduction through wall, cylinder and sphere. Thermal contact resistance, Heat conduction in bodies with heat sources, Fins. Unsteady state Heat conduction- Lumped System Analysis

Unit-II:FORCED CONVECTION

Basic Concepts – Convective Heat Transfer Coefficients- Types of Convection – Forced Convection – Dimensionless numbers and their physical significance- Thermal and Hydrodynamic boundary layer-External Flow – Flow over Plates, Cylinders and Spheres- Internal flow - Laminar and turbulent flows

Unit-III:FREE CONVECTION

Basic Concepts – Dimensionless numbers and their physical significance- Flow over Vertical Plate, Flow over vertical pipe, Flow over Horizontal Plate, Flow over Horizontal pipe Inclined Plate, Flow over Cylinders and Spheres.

Unit-IV:RADIATION

Absorptivity, reflectivity and transmissivity, black, white and grey body, emissive power and emissivity, laws of radiation – Planck, Stefan-Boltzmann, Wein's displacement, Kirchhoff's law, Lambert's cosine law Radiation heat exchange between black bodies, Radiation Shields, irradiation

Unit-V:HEAT EXCHANGER

Classification, heat exchanger analysis, LMTD for parallel and counter flow exchanger, condenser and evaporator, overall heat transfer coefficient, fouling factor, effectiveness and number of transfer unit for parallel and counter flow heat exchanger, introduction of heat pipe and compact heat exchanger

MEC19D442 · AUTOMATIC C	L	Т	Р	С					
MIECIOR445: AUTOMATIC G	3	0	0	3					
Due veguisiter Nil	Course Category: Open Elective								
Pre-requisite: 1011	Course Type : Theory								

Course Objective(s):

To understand the application of AGVS in industry in order to optimize the material flows and their variety of uses and the technological standards that are available at present.

Course Outcome(s):

CO1	Identify the evolving history of AGVS and their use.
CO2	Recognize the applications of AGVS in modern day's industries and their advantages in
02	reducing human effort.
CO3	Describe the technological standards to meet the customer needs accordingly.
CO4	Illustrate the use of AS/RS and learn its designing methods.
CO5	Identify the AGVS requirements for sustaining in the future challenges.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	1	1	1												
CO2	1	2	1										1		
CO3	1	2											1		
CO4	1	2			2										2
CO5	1	1			1							2	1	2	1

Course Topics: Unit-I: INTRODUCTION

Introduction to AGV – Evolution of AGV – Vehicle guidance technology – Vehicle management and safety - Benefits of AGV's - Important issues for AGVS – Navigation.

Unit-II: MODERN AREAS OF APPLICATION

Flow Line Organization and the Focus on Series Production -Warehousing and Commissioning – Industry related Aspects and Examples - Paper Manufacturing and Processing- Steel Making Industry.

Unit-III: TECHNOLOGICAL STANDARDS

Navigation and Safety- AGVS Guidance Control - AGV Categories: towing vehicle, unit load carriers, pallet trucks, forklift trucks, light-load transporters, assembly-line vehicles- AGVS Environment.

Unit-IV: AUTOMATED STORAGE AND RETRIEVAL SYSTEM

Definition of AS/RS - Functions of AS/RS - Components and Terminology – Types - Design of AS/RS – AGV Interfacing with other subsystems –Conventional storage methods and equipments.

Unit-V: FUNCTIONAL CHALLENGES FOR THE AGVS OF THE FUTURE

Drive Safe: Integration of Navigation and Safety - Automated Togetherness: Acting Intelligently - Energy Mix: Modern Energy Management - Market Development - Case studies.

MEC19D445 · ADDITED THE	L	Τ	Ρ	С			
WIECIOR445 : AFFLIED THE	MEC18R445 : APPLIED THERMODYNAMICS						
Pre-requisite: MEC18R202/	Pre-requisite: MEC18R202/ Course Category: Open Ele						
Thermodynamics							

Course Objective(s):

To enable the students to understand the basic principles and concepts of classical thermodynamics and apply it to various systems & analyse the performance various cycles

Course Outcome(s):

CO1	Illuminate the basic concepts of thermodynamics and zeroth and first laws.
CO2	Interpret the idea of second law of thermodynamics to elaborate simple systems.
CO3	Execute the performance of some gas power cycles.
CO4	Comprehend the properties of pure substances.
CO5	Analyze the performance of vapour power cycles.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	1	2	2										2	1	
CO2	2	2	2										2	1	
CO3	2	2											1	1	
CO4	2	1	2										2	1	
CO5	2	2	2										2	1	

Course Topics:

Unit-I: BASIC CONCEPT, FIRST LAW

Classical approach, concept of continuum, thermodynamic systems - closed, open and isolated. First law of thermodynamics for open and closed systems

Unit-II: SECOND LAW OF THERMODYNAMICS

Second law of thermodynamics – Kelvin's and Clausius statements of second law, Reversibility and irreversibility, Carnot theorem, Carnot cycle, reversed carnot cycle, efficiency, COP.

Unit-III: GAS POWER CYCLES

Otto, Diesel, Dual cycle- Calculation of mean effective pressure, and air standard efficiency

Unit-IV: PROPERTIES OF PURE SUBSTANCE

Properties of pure substances – thermodynamic properties of pure substances in solid, liquid and vapour phases, phase rule, P-V, P-T, T-V, T-S, H-S diagrams, PVT surfaces, thermodynamic properties of steam

Unit-V: VAPOUR POWER CYCLE

Standard Rankine cycle - Performance, comparison between Rankine and Carnot cycle, Reheat and regenerative cycle, combined cycle.

Text Book(s):

MEC19D446 INDUSTDIAL	L	Τ	Р	С						
MECIOR440 : INDUSIRIAL	3	0	0	3						
Bro pognicitor Nil	Course Category: Open Elective									
rre-requisite: 1011	Course Type : Theory									

Course Objective(s):

The aim of undergoing this course develop an awareness of the major perspectives underlying the field of Industrial Psychology and understanding for the potential Industrial Psychology has for society and organizations now and in the future.

Course Outcome(s):

CO1	Outline the key concepts, theoretical perspectives, and trends in industrial psychology.
CO2	Identify the problems present in environment and design a job analysis method.
CO3	Create a better work environment for better performance.
CO4	Explain various work methods and improve efficiency at work.
CO5	Examine the factors of job design and discuss about Accidents and safety.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	1	2						2	2			2	1		
CO2	1		2			2					3		1		
CO3	1				2	2			2		3	2	1	2	
CO4	2		2						2	2	2		2	3	
CO5	2			2		2	2					2	2	2	

Course Topics: Unit-I: INTRODUCTION

The role of the psychologist in industry, the field of occupational Psychology - Study of behaviour in work situation and applications of Psychological principles to problems of selection, Placement, Counseling and training.

Unit-II: DESIGN OF WORK ENVIRONMENTS

Human engineering and physical environment techniques of job analysis, Social environment- Group dynamics in Industry Personal psychology - Selection, training, placement, promotion, counseling, job motivations, job satisfaction. Special study of problem of fatigue, boredom and accidents.

Unit-III: UNDERSTANDING CONSUMER BEHAVIOUR

Consumer behaviour, study of consumer preference, effects of advertising, Industrial morale - the nature and scope of engineering psychology, its application to industry.

Unit-IV: WORK METHODS

Efficiency at work, the concept of efficiency, the work curve, its characteristics - The work methods; hours of work, nature of work, fatigue and boredom, rest pauses. The personal factors; age abilities, interest, job satisfaction The working environment - noise, illumination, atmospheric conditions - Increasing efficiency at work; improving the work methods, Time and motion study, its contribution and failure resistance to time and motion studies, need for allowances in time and motion study.

Unit-V: WORK AND EQUIPMENT DESIGN

Criteria in evaluation of job-related factor, job design, human factors, Engineering information, input processes, mediation processes, action processes, methods design, work space and its arrangement, human factors in job design. Accident and Safety - The human and economic costs of accidents, accident record and statistics, the causes of accidents situational and individual factors related to accident reduction.

MEC19D447 . DDOCESS FOUND	L	Т	Р	С					
WIECIOR447 : FROCESS EQUIPM	3	0	0	3					
Due neguisites Nil	Course Category: Open Elective								
Pre-requisite: Nil	Course Type : Theory								

Course Objective(s):

The aim of undergoing this course is to develop basic knowledge of the topics in Engineering drawing. Knowledge of Heat Transfer, Mass Transfer, Mechanical Operations and Mechanical Equipment Design.

Course Outcome(s):

CO1	Understand the significance of process design parameters, codes used in industries.
CO2	Design cylindrical and spherical vessels as per design standards.
CO3	Identify the suitable process for design considering different mechanical aspects.
CO4	Understand the fundamental aspects of piping and also design for various applications.
CO5	Enumerate various safety measures considered for designing mass transfer column.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	1		3										1		
CO2	1	2	3										2		
CO3	1	2	3										2		
CO4	1	2	3										2		
CO5	1	3	3										2		

Course Topics:

Unit-I: PROCESS DESIGN PARAMETERS

Introduction to Basic process requirement of plants and projects, Importance of codes and standards and their applications. P&ID, Process Data Sheet, PFD, Introduction to various design codes required in Process Equipment Design such as; ASME, Section VIII; API; ASTM; TEMA and their significance, factor of safety, corrosion allowance, weld joints efficiency, design loading, stress concentration and thermal stresses, failure criteria.

Unit-II: DESIGN OF CYLINDRICAL AND SPHERICAL VESSELS

Types of various welding analysis - Thin and thick walled cylinder analysis, design of end closers, local stresses due to discontinuity, Design of standard and non-standard flanges, design of vessels and pipes under external pressure.

Unit-III: PROCESS OF EQUIPMENT DESIGN

Storage vessels, reaction vessels, agitation and mixers, heat exchangers, filters and driers, centrifuges. Code practices, selection and specification procedures used in design. Selection of pumps, compressors, electrical equipment auxiliary services and safety.

Unit-IV: PROCESS OF PIPING DESIGN

Flow diagrams and pipe work symbols, steam and compressed air pipes work, pipe fitting, linings and flanged connections. Types of valves used on pipe line. Fabrication of pipe lines, expansion joints and pipe supports.

Unit-V: DESIGN AND SAFETY MEASURES OF MASS TRANSFER COLUMN

Design of distillation and absorption column - Stresses in column shell - Design and construction features of column internals. Process Hazards, Safety measures, Safety measures in equipment design, Pressure relief devices.

Text Book(s):

- 1. M.V.Joshi and V.V. Mahajan, "Process Equipment Design", Edition: 3, MacMillan India Ltd , 2016.
- 2. S.D.Dawande, "Process Design of Equipments", Edition: 3, Central Techno Publications , 2000.

MEC18D440 . ENCINEED	L	Т	Р	С					
NIECIOR449: ENGINEER	MEC18K449 : ENGINEEKING DESIGN								
Due neguicites Nil	Course Category: Open Elective								
rre-requisite: 1011	Course Type : Theory								

Course Objective(s):

The aim of undergoing this course is to give basic knowledge about the engineering design, conceptualization and lateral thinking

Course Outcome(s):

CO1	Understand the fundamentals of design conceptualization and thinking
CO2	Identify the creative thinking techniques for a given problems
CO3	Understand the need and analysis of design process.
CO4	Apply the design models and innovative thinking for solving design oriented problems
CO5	Apply the design principles and techniques to validate the design models.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	1		3										1		
CO2	1	2	3										2		
CO3	1	2	3										2		
CO4	1	2	3										2		
CO5	1	3	3										2		

Course Topics:

Unit-I: DESIGN FUNDAMENTALS, DESIGN THINKING

Design Conceptualization and Philosophy-Original-Adaptive-Variant and Re-Design- Evolution of Concept-Need for Systematic design, past methods of design. Theories of thinking- types of thinking-convergent and divergent, Inductive and deductive thinking, lateral and vertical thinking..

Unit-II: DESIGN CONCEPTUALIZATION AND CREATIVE THINKING TECHNIQUES

Conceptualization techniques–Idea generation–ideation, brainstorming, Trigger session-Brain writing, Mind maps, SCAMPER, 6 mat thinking techniques, TRIZ, Biomimicry, Shape mimicry, Familiarity Matrix Concepts screening-3D Printing- RPT

Unit-III: DESIGN NEED AND ANALYSIS

Needs and opportunities- Vision and Mission of a concept-Type of needs-Technology S-curve-Need analysismarket analysis and competitive analysis- Kano Diagrams- SWOT analysis.

Unit-IV: DESIGN MODELS AND INNOVATIONS

Product life cycle- Innovation- Types of innovation Organization of design concept and design methods-Engineering Design-Descriptive and prescriptive model- Design decisions and development of design-Free hand sketching- Reengineering.

Unit-V: DESIGN VALIDATION AND CASE STUDIES

Concept testing-exploratory tests, Assessment tests, Validation tests, Comparison tests-Case studies-Intellectual Property Rights (IPR)--Group work and Case study

HUMANITIES ELECTIVE

HSS18R001 : MANAGEMENT	L	Τ	Р	С					
TECHNIQUES	3	0	0	3					
Bro requisites Nil	Course Category: Humanities Elective								
rre-requisite: 1011	Course Type : Theory								

Course Objective(s):

This course addresses the definition of management, its characteristics, evolution and importance as well as the functions performed by manages-planning, organizing, directing and controlling. The course also intends to show students the applications of management functions in various enterprises such as marketing, finance, personnel, production, etc.

Course Outcome(s):

CO1	Explain the historical backdrop and fundamentals of Management thoughts vital for
COI	understanding the conceptual frame work of Management as a discipline
CON	Discuss about the various concepts of planning, Decision making and controlling to help
02	solving managerial problems
CO3	Understanding concepts of Ethics, Delegation, Coordination and Team work
CO4	Study and understand the management concepts and styles in Global context
CO5	Develop an understanding about emerging concepts in management thought and philosophy

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2					2						1	2		
CO2	2						2	2	1	1			2		
CO3	1					1		3	3	2			1		
CO4	2					3	2			1			2		
CO5	2						3					3			

Course Topics:

Unit-I: DEVELOPMENT OF MANAGEMENT THOUGHTS

Scientific Management Movement - Administrative Movement - Human Relations Movement - Decision Movement - Behavioural Science Movement - Systems Movement - Contingency Movement.

Unit-II: ESSENTIALS OF PLANNING

Planning Objectives – Goals - Programmed Decisions and Unprogrammed Decisions; Decision – Making - Creativity in Decision - Making, Forecasting and Strategy to Formulation

Unit-III: EFFECTIVE ORGANISING

Span of Control - Departmentation - Authority; Responsibility - Bureaucracy and Adhocracy; Group Dynamics

Unit-IV: STAFFING AND DIRECTING

Staffing: Manpower Planning – Recruitment Sources – Selection Procedure – Training Methods – Performance Evaluation Methods – Executive Development Programs - Directing: Communication Process and Barriers – Motivation Techniques – Financial and Non – Financial Motivation- Leadership Qualities and Styles

Unit-V: CONTROLLING AND RECENT CONCEPTS

Controlling: Meaning and Process - Requisites of Effective Control - Control Techniques. Emerging Issues in Management: Japanese and American Management – Management by Objectives – Knowledge Management – Technology Management – Business Process Outsourcing- Social Responsibility and Business Ethics

HSS19DAA2 . MADKETING N	L	Τ	Р	С				
HSSIORUUZ : MARKEIING M	3	0	0	3				
Due neguicites Nil	Course Category: Humanities Elective							
Pre-requisite: NII	Course Type : Theory							

Course Objective(s):

This course develops students understanding of how organizations match the requirements of consumers in competitive environments, and develop strategies to create the competitive edge. It covers areas such as analysis, planning, implementation, and control, as well as the marketing mix, exportation, and the social aspects of marketing.

Course Outcome(s):

CO1	Develop understanding of marketing concepts, philosophies and historical background
CO2	Develop understanding of marketing operations and complexities for students to apply in
	practical business situations
CO3	Understand concepts related to Segmentation, Targeting and Positioning, product attributes,
	and pricing strategies prevalent in domestic and international scenario
CO4	Interpret various tools and techniques of promoting the products in ethical manner
CO5	Understand emerging concepts of marketing in the emerging global markets

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2					2	1					1	2		
CO2	2						2	2	1	1			2		
CO3	2					1		3					2		
CO4	2					3	2	3	1	1			2		
CO5	2						3					3	2		

Course Topics:

Unit-I: MARKETING

Meaning - concept - functions - marketing Planning and implementation marketing Programmes - Marketing environment – Market Segmentation and consumer behaviour – Influencing factors, Decision process –Marketing mix – Marketing department

Unit-II: PRODUCT

Meaning - Product planning - policies - positioning - New product development Product life cycle – BCG Matrix - branding. Packing, labelling

Unit-III: PRICING

Pricing objectives – Setting and modifying the price – Different pricing method Product line pricing and new product pricing

Unit-IV: DISTRIBUTION

Nature of Marketing channels - Types of Channel flows – Channel functions - Channel co-operation, conflict and competition - Direct Marketing Telemarketing, Internet shopping

Unit-V: PROMOTION

Promotion Mix - Advertisement - Message - copy writing – Advertisement - budgeting - Measuring advertisement effectiveness - Media strategy - sales promotion - Personal selling steps, publicity and direct marketing

Text Book(s):

| HSSIORUUS: OKGANISATIONA | 3 | 0 | 0 | 3 | | | | | |
| Due noguicitor Nil | Course Category: Humanities Elective | | | | | | | | |
| Pre-requisite: INII | Course Type : Theory | | | | | | | | |

Course Objective(s):

This course aims to clarify the principles and basic concepts of organizational psychology. Including organizations and understanding its business design based on efficiency and quality of employee life. It also aims at enhancing the quality of life of employees. When organization's aspects are gauged in terms of psychological assessment, personnel decisions in line with training and development, organizational change and organizational health in specific the intrinsic problems are understood paving way towards standards that are high.

Course Outcome(s):

CO1	Interpret basic concepts of industrial and organizational psychology
CO2	Illustrate different ways of achieving organizational effectiveness through individual behaviour
CO3	Understand the concepts relating to individual behaviour to achieve group target and achieve leadership position in organisation
CO4	Understand the organisational changes and means to evaluate based on nature of organisations
CO5	Inspect the implications of changes aligning the interest of individual, group and organisation

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CO3						1		1	2	3					
CO4	2					1	1	1	1	1			2		
CO5	2					1	1	1				1	2		

Course Topics:

Unit-I: FOCUS AND PURPOSE

Organisational Behaviour - Need and importance, nature and scope, framework

Unit-II: INDIVIDUAL BEHAVIOUR

Personality – types – factors influencing personality – theories – learning – types of learners – learning theories – organizational Behaviour modification. Attitudes – characteristics –components – formation – measurement. Perceptions – importance – factors influencing perception – interpersonal perception

Unit-III: GROUP BEHAVIOUR

Pricing objectives – Setting and modifying the price – Different pricing method Product line pricing and new product pricing

Unit-IV: LEADERSHIP

Leadership styles – theories – Qualities - leaders Vs managers – sources of power – power centres – power and Organisational Politics- Motivation

Unit-V: ORGANISATIONAL DEVELOPMENT

Organizational development - Importance, characteristics, objectives, stability Vs change, proactive vs reaction change, the change process, resistance to change, managing change, team building - Organizational effectiveness, perspective, effectiveness Vs efficiency, approaches, the time dimension, achieving organizational effectiveness

Text Book(s):

HSS19DAAA DDAIECT M	L	Τ	Р	С					
	3	0	0	3					
Due neguigite. Nil	Course Category: Humanities Elective								
rre-requisite: 1011	Course Type : Theory								

Course Objective(s):

This course describes concepts relating to project management and enable students to evolve project objectives appropriately with relevance to business proposals. It covers the required dimensions relating to evaluation of project by testing the technical feasibility, financial viability, market acceptability and social desirability of projects. It gives an account on risk and profitability analysis that facilitates the making of the effective project proposal and guides learners in project planning, implementation and control. It also emancipates the scope of project management in undertaking foreign collaboration projects

Course Outcome(s):

CO1	Familiarizes the concept of project and steps in project management
CO2	Understand the basics stages involved in preparing business proposals
CO3	Evaluate the technical feasibility, financial viability, market acceptability and social desirability of projects.
CO4	Enabled to analyse the Risk and profitability of the project proposals
CO5	Act effectively as project managers and as part of project teams

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2						1		1	2	3	1	2		
CO2	2					2		1	3	3	1		2		
CO3	1					3		1	1	1	3				
CO4	2					2	1	1	1	1	3	1	2		
CO5	2					2		1	3	1	1	1	2		

Mapping of Course Outcome(s):

Course Topics:

Unit-I: INTRODUCTION TO PROJECT MANAGEMENT

Projects - Project ideas and preliminary screening. Developments - Project planning to Project completion - Preinvestment phase, Investment phase, operational phase - Governmental Regulatory framework. Capital Budgeting

Unit-II: STAGES OF PROJECT MANAGEMENT

Opportunity studies - prefeasibility studies, functional studies or support studies, feasibility study expansion projects, data for feasibility study. Market and Technical Appraisal: Market and Demand analysis, Market Survey, Demand forecasting. Technical analysis- Materials and inputs, Choice of Technology, Product mix, Plant location, capacity, Machinery and equipment

Unit-III: APPRAISAL PROCESS

Concepts. Time value of money - Present and future value. Appraisal criteria - Urgency, Payback period, Rate of return, Debt service coverage ratio, Net present value, Benefit cost ratio, Internal rate of return, Annual capital charge, Investment appraisal in practice

Unit-IV: RISK AND PROFITABILITY ANALYSIS

Risk analysis- Measures of risk, Sensitivity analysis, and Decision tree analysis. Means of financing, Term Loans, Financial Institutions. Cost of capital. Profitability - Cost of Production, Break-even analysis. Assessing the tax burden and financial projections

Unit-V: PROJECT PLANNING, IMPLEMENTATION AND CONTROL

Forms of Project Organization, Project Planning, Implementation, and Control - Network construction, CPM, PERT, Development of Project schedule, Crashing of Project Network. Introduction to Foreign collaboration projects - Governmental policy framework, Need for foreign technology, Royalty payments, Foreign investments and procedural aspects

HSS18R005 : STRESS MANAGEM	IENT AND COPING	L	Τ	Р	С				
STRATEGIES	3	0	0	3					
	Course Category: Humanities Elective								
Pre-requisite: INII	Course Type : Theory								

Course Objective(s):

Stress has become an integral part of every professional's life. Approaching the stress in the right manner has become imperative as it has become an unavoidable one. The stress and its effect over performance has also become notable in today's organization. To cope well and to sustain in market, for that the skills are required to understand and to overcome the same. This course helps in understanding the intricacies of stress and overcoming the stress through appropriate approaches

Course Outcome(s):

CO1	Understand the responsibility of tackling stress
CO2	Identify and modify the approaches of stress accordingly while dealing with team in
02	workplace
CO3	Illustrate the concepts to face high- pressure working conditions will be able to tackle
COS	stress appropriately without ignoring
CO4	Interpret to implement a stress -free work environment
CO5	Illustrate the behaviour and personality and ensure professional working condition and
05	balanced quality of life

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2						1		1	2		1	2		
CO2	2					1		2	3	3			2		
CO3	2					2		1	1				2		
CO4						1	1	1	1	1		1			
CO5	1					1		1	3	1		1	1		

Course Topics:

Unit-I: UNDERSTANDING STRESS

Meaning - Symptoms: Biological and Behavioural - Work Related Stress - Individual Stress - Reducing Stress - Burnout

Unit-II: COMMON STRESS FACTORS TIME

Common Sources of Stress Biological, Personality and Environmental – Time Management – Techniques – Importance of planning the day – Time management schedule – Developing concentration – Organizing the Work Area - Prioritizing – Beginning at the start – Techniques for conquering procrastination – Sensible delegation – Taking the right breaks – Learning to say 'No'

Unit-III: CRISIS MANAGEMENT

Implications – People issues – Structure issues, environmental issues, psychological fall outs – Learning to keep calm – Preventing interruptions – Controlling crisis – Importance of good communication – Taking advantage of crisis – Pushing new ideas – Empowerment

Unit-IV: WORK PLACE HUMOUR

Developing a sense of Humour – Learning to laugh, role of group cohesion and team spirit, using humour at work, reducing conflicts with humour. Coping Styles Defensive Behaviours and Problem-Solving

Unit-V: SELF DEVELOPMENT

Improving Personality – Leading with Integrity, enhancing creativity – Effective Decision Making – Sensible Communication – The Listening Game – Managing Self - Meditation for Peace – Yoga for Life

Text Book(s):

HSS18DAAG · ECONOMICS EA	L	Τ	Р	С					
HSSI6K000: ECONOMICS F	3	0	0	3					
D	Course Category: Humanities Elective								
Pre-requisite: Nil	Course Type : Theory								

Course Objective(s):

This course introduces a broad range of economic concepts, theories and analytical techniques. It considers both microeconomics - the analysis of choices made by individual decision-making units (households and firms) - and macroeconomics - the analysis of the economy. Demand and market structure will be analysed at the firm level. Macroeconomic issues regarding National Income, Inflation, labour and money at an aggregate level will be modelled. The role of government policy to address microeconomic market failures and macroeconomic objectives will be examined

Course Outcome(s):

CO1	Identify and learn economic concepts into market economies
CO2	Understand the pricing methods, interpret the market factors to determine the price for
02	products or services and to making decisions based on demand factors.
CO3	Understand the major characteristics of different market structures and the implications for
COS	the behaviour of the firm.
CO4	Measure living standards, inflation, and unemployment for use as economic indicators.
CO5	Understand the role of international trade involved in commercial and central banks

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1											3				
CO2						1		1			2				
CO3						1	1		2	1	1				
CO4	3	3									1			2	
CO5	1							1	1					1	

Course Topics:

Unit-I: DEFINITION AND SCOPE OF ECONOMICS

Meaning - Symptoms: Biological and Behavioural - Work Related Stress - Individual Stress - Reducing Stress Definitions by A. Smith, A. Marshal and L. Robbins, P.Samuels on and their critical examination - Nature and scope of Economics - Micro-economics in relation to other branches of Economics

Unit-II: PRICING AND LAW OF DEMAND

Demand, Factors influencing demand, Elasticity of demand - price, income and cross, concepts and measurement - Break Even Analysis – Law of Demand - Price, income and substitution effects - Giffen goods- Pricing Methods

Unit-III: MARKET STRUCTURE

Definition of market. Concepts of product and factor markets. Different types of market: perfect competition, monopoly, imperfect competition, monopolistic, competition and oligopoly. Demand and Supply schedules. Price determination under perfect competition in long and short run. Price determination under monopoly. Discriminating monopoly

Unit-IV: : MACRO ECONOMICS

Meaning, Macro-economic Policy and Its Objectives and Instruments - National Income and Social Accounting - Concepts, components, and measurement - Basic circular flow of income model, Unemployment, trade cycle, Inflation - causes, types, effects and control

Unit-V: COMMERCIAL AND CENTRAL BANKS

Credit creation, monetary policy and tools - Balance of payments - Items in the balance of payments account, equilibrium in the balance of payments

Text Book(s):

- 1. S. B. Gupta, "Monetary Economics", Edition: 2, S. Chand & Co, New Delhi, 2009.

HSS18R007 : HUMAN RESOURCE	L	Τ	Р	С					
LABOUR LAV	3	0	0	3					
	Course Category: Humanities Elective								
Pre-requisite: N11									

Course Objective(s):

This course aims at exploring key issues related to the management, performance, and development of human resources in the workplace. It places special emphasis on making decisions and developing plans that will enable managers to make the best possible use of their human resources, and covers areas such as: manpower planning, analysis and evaluation, recruitment and selection, wages and salaries, training and management development, performance appraisal, and industrial relations

Course Outcome(s):

CO1	Illustrate the basic knowledge on developing the employment relations and knowledge to resolve the issues
CO2	Interpret an appropriate and suitable role of HR specialist for implementing Human Resource Management policies
CO3	Illustrate the manpower to motivate and attract them to retain in the organization.
CO4	Understand the responsibility of employer and legal system to manage the employment relations
CO5	Understand the applicability of business law on various functional domains this in turn enhances a strong human relation

Mapping of Course Outcome(s):

		0				× /									
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2						1	1	2				2		
CO2	2								2	2			2		
CO3									3	3					
CO4						1		1	1						
CO5	2					1	1	1	3				2		

Course Topics:

Unit-I: FUNDAMENTALS OF HRM

Human Resource Development Systems-HR environment in India-Functions and Operations of a Personnel Office - Emerging HR Trends - HR information system

Unit-II: : HRM FUNCTIONS

Job analysis and job design - HR planning – Recruitment - selection and induction- Staff Training and Development-Career planning and Development- Job Evaluation-Performance Appraisal and Potential Evaluation-Wage determination; salary structure-Wage policies and Regulations-Employee benefits and services

Unit-III: MOTIVATING HUMAN RESOURCES

Team and Team work - Collective Bargaining Employee Morale – Participative Management – Quality Circle – Empowerment –counselling and mentoring

Unit-IV: MAINTENANCE OF WORKERS

Compensation Management- Reward system – Labour relations –Employee Welfare, Safety and Health – Employee benefits and services – Promotion, Transfers and separation – Ethical issues in HR Management and International Human Resource Management - Legal Aspect of Labour

Unit-V: BUSINESS LAW

Factories Act, 1948 - Industrial Dispute Act, 1947 – Industrial employment – Standing Orders Act, 1946 – Trade Union Act, 1926 - Workmen Compensation Act, 1923, Employees State Insurance Act, 1948, Employees Provident Fund and Miscellaneous Provision Act, 1952, Payment of Gratuity Act, 1972. Payment of Wages Act 1936, Minimum wages Act, 1948– Payment of Bonus Act, 1965. Tamil Nadu Shops and Establishments Act.

USC19DAAQ . ENTDEDDENELIDGE	L	Τ	Р	С					
HSSIOKUUO: EN IKEFKENEUKSE	3	0	0	3					
Due neguisites Nil	Course Category: Humanities Elective								
Fre-requisite: INII	Course Type : Theory								

Course Objective(s):

This course focuses on the entrepreneurial process and the different kinds of entrepreneurial outcomes. Topics covered include opportunity identification through analysis of industry niches, skills needed to turn an opportunity into reality, business plans, launch decisions, and obtaining risk capital. This course deals with the problems and challenges facing the management of businesses in raising funds, marketing products and services, improving effectiveness and flexibility, and achieving growth.

Course Outcome(s):

CO1	Illustrate the concept of entrepreneurship and which in turn leads to think creatively for new
COI	business opportunities to sustain individual as well as social goals.
CO2	Understand and promotes entrepreneurial spirit and provides a framework of successful
02	business world with relation to agencies to promote employment opportunities
CO3	Interpret on women entrepreneurship and promotes a successful business models and
005	explains operational implementations for investment details
CO4	Understand the role of government in promoting the entrepreneurship among the individuals
04	and organizations
COF	Understand emerging concepts of marketing in the emerging global markets and provide
05	more insights into project management and venture promotion

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	1					3	1	1		1		1			
CO2	1					1		1							
CO3						2		2							
CO4	2							1		1			1		
CO5	2						3				1	3	1		

Course Topics: Unit-I: BASICS

Concepts of entrepreneur, entrepreneurship and entrepreneur - Characteristics and competencies of a successful entrepreneur - General functions of an entrepreneur - Type of entrepreneurs - Role of entrepreneur in economic development - Distinction between an entrepreneur and a manager - Entrepreneur and Intrapreneur

Unit-II: GROWTH OF ENTREPRENEURSHIP

Emergence of entrepreneurship - Economic and non-economic factors for stimulating entrepreneurship development - Obstacles to entrepreneurship development in India - Growth of entrepreneurship in India.

Unit-III: WOMEN AND ENTREPRENEURSHIP

Concept of women entrepreneurship - Reasons for growth of woman entrepreneurship - Problems faced by them and remedial measures

Unit-IV: ROLE OF THE GOVERNMENT IN ENTREPRENEURSHIP DEVELOPMENT

Concept and meaning of entrepreneurship development - Need for entrepreneurship development programmes (EDPs) - Objectives of EDPs - Organizations for EDPs in India; NIESBUD, SISI – their roles and activities.

Unit-V: VENTURE PROMOTION AND PROJECT FORMULATION

Concept of projects classification of projects and project report - Project identification and selection - Constraints in project identification - Techniques of Project Identification, Significance – contents - formulation of project report - Need for Project Formulation - Elements of project Formulation

Text Book(s):

HSS19DAAA . COST ANALVSIS	L	Τ	Р	С					
H5516K009: COS1 ANAL 1515	3	0	0	3					
Due noguiaitos Nil	Course Category: Humanities Elective								
Pre-requisite: Nil	Course Type : Theory								

Course Objective(s):

This course in meant to exhibit the concepts on costing by describing its elements, types and cost sheet preparation. It also encompasses the analytical framework that can be applied in cost analysis like Marginal costing, CVP analysis, break even analysis, etc. enabling the students to make decisions on cost parameters. Students are enabled to apply techniques like standard costing, activity based costing, etc. to manage and control cost effectively

Course Outcome(s):

CO1	Understand the basics of Costing and preparation of Cost sheet.
CO2	Analyse the cost by applying tools like Marginal costing, CVP analysis and other applications
CO3	Understand the use of Budgets for controlling cost in Manufacturing or Production Centres
CO4	Illustrate the cost standards and critically examining the application of Standard costing in
04	a Production Centre
CO5	Understand the application of various strategic cost alternatives including Activity based
COS	costing

Mapping of Course Outcome(s):

		<u> </u>													
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1											3	1			
CO2											3	1			
CO3	1			1							2		1		
CO4									1		2				
CO5											2				

Course Topics: Unit-I: BASICS OF COSTING

Costing, Elements of costing, Types of cost, Preparation of cost sheet

Unit-II: COST ANALYSIS

Marginal costing, Cost - volume - Profit analysis, Break-Even- Analysis, Break - Even - Chart, Applications

Unit-III: CONTROL TECHNIQUES

Budgeting and Budgetary control, Types of Budgets, Preparation of purchase Budget, Flexible budgets, Cash Budget, Sales Budget, Materials Budget, Master Budget, zero based Budgeting

Unit-IV: STANDARD COSTING

Types of Standards, Setting up of standards, Advantages and Criticism of Standard Costing –Control through variances

Unit-V: ACTIVITY BASED COSTING

Transfer Pricing, Target costing, Life Style Costing, Activity Based Costing (only theory)

Text Book(s):

HSS18DA1A . DDADLICT DESIGN	L	Τ	Р	С						
HISSIGROID . I RODUCT DESIGN P	text.	text.	text.	text.						
Due neguicites Nil	Course Category: Humanities Elective									
Pre-requisite: INII	Course Type : Theory									

Course Objective(s):

This course aims to clarify the principles and basic concepts of Product Design and Development. Including organizations and understanding of its products. It also aims at enhancing the quality of products. Product Design means recognition of a new product need, information gathering and requirements setting up, unambitious-clear and complete specification list, study on the product's mechanical architecture, selection of materials and production processes and engineering the various components necessary to make the product work.

Course Outcome(s):

CO1	Understand the basic concepts related to design and development of New product
CO2	Understand the structured approach towards incorporating quality, safety, and reliability
02	into design
CO3	Illustrate the concepts relating to simulating product performance and manufacturing
005	processes
CO4	Understand the technologies related to computer aided group technology
CO5	Interpret implications of changes related to Economic analysis

Mapping of Course Outcome(s):

		0				S. 7									
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2			1		1	2					1			
CO2	2	2		1		1	2					1	2	1	
CO3	2	2					2					1	2	1	
CO4	2						1	1				1	2		2
CO5	2			1				2		1	1	1	2		

Course Topics:

Unit-I: NEW PRODUCT IDEA

Definition – Design by Evolution and by Innovation - factors to be considered for product design – Production-Consumption cycle – The morphology of design – Primary design Phases and flowcharting. Role of Allowance, Process Capability, and Tolerance in Detailed Design and Assembly Product strategies, Market research – identifying customer needs – Analysis of product – locating ideas for new products, Selecting the right product, creative thinking, curiosity, imagination and brain storming - product specification

Unit-II: NEW PRODUCT DESIGN

Task - Structured approaches – clarification – search – external and internal – systematic exploration – conception, selection - methodology benefits. The value of appearance - principles and laws of appearance – incorporating quality, safety, and reliability into design. Man-machine considerations – Designing for ease of maintenance.

Unit-III: ROLE OF TECHNOLOGY IN DESIGNING

Integrating CAE, CAD, CAM tools – Simulating product performance and manufacturing process – Needs for industrial design-impact – Industrial design process – Technology driven products - user driven products – assessing the quality of the product

Unit-IV: METHODS AND PRINCIPLES OF DESIGNING

Methodologies and tools - Design axioms - Design for assembly and evaluation - Minimum part assessment - Taguchi Method - Robustness assessment - Manufacturing process rules - Designer's tool kit - Computer aided group process rules - Designer's tool kit - Computer aided group technology - Failure Mode Effective Analysis – Design for minimum number of parts – Development of modular design – Minimising part variations – Design of parts to be multifunctional, multi-use, ease of fabrication – Pooka Yoka principles.

Unit-V: FEASIBILITY ANALYSIS

Estimation of manufacturing cost – cost procedures – Value Engineering - reducing the component cost and assembly cost – minimizing the system complexity – Basics and Principals of prototyping – Economic Analysis: Break even analysis. Classes of exclusive rights – Patents – Combination versus aggregation – Novelty and Utility – Design patents – Paten disclosure – Patent application steps - Patent Office prosecution - Sales of patent rights - Trademarks – copy rights.

HSS19DA11 . DUSINESS DDACES	L	Т	Р	С						
HSSIORUII: DUSINESS FROCES	3	0	0	3						
Dra reguisita. Nil	Course Category: Humanities Elective									
Pre-requisite: INII	Course Type : Theory									

Course Objective(s):

This course focuses on both quantitative and qualitative analytical skills and models essential to operations process design, management, and improvement in both service and manufacturing oriented companies. The main objective of the course is to prepare the student to play a significant role in the management of a world class company which serves satisfied customers through empowered employees, leading to increased revenues and decreased costs.

Course Outcome(s):

CO1	Understand the basic concepts related to Business Process Reengineering
CO2	Understand the methodologies and tools used for Business Process Reengineering
CO3	Illustrate the concepts relating to benefit/cost analysis and its impact on the business
005	organizations
CO4	Understand the need for assessment of business re-engineering and the factors contributing
004	to its success
COF	Interpret the best practices used in Business Process Reengineering with illustrations from
005	corporate world

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CO2						1	1	3	1						
CO3						1		1	1	1	2	1			
CO4	1						1	1					1		
CO5							2					3			

Course Topics: Unit-I: BASIC CONCEPTS

Introduction to BPR Definition; the paradigm shifts in production; the positioning concept; the re-engineering visions; the benefits of business re-engineering

Unit-II: METHODOLOGIES FOR BPR

Methodologies and Tools for BPR, Process management; dynamic business re-engineering change framework; steps to reengineer the process.

Unit-III: MODELLING THE BUSINESS

Methodologies and Tools for BPR, Process management; dynamic business re-engineering change framework; steps to reengineer the process

Unit-IV: :CHANGE MANAGEMENT

Change Management, Planned changes in business re-engineering projects; challenges of business change; business change development. Success factors in re-engineering. The assessment of business re-engineering.

Unit-V: BEST PRACTICES IN BPR

Best Practices in BPR, Case studies: Bell Atlantic, Nissan, Chrysler, Xerox, and Hewlett Packard etc.

Text Book(s):

HSS18DA12 . DOL ITICAL	L	Τ	Р	С					
HSSI6K012 : FOLITICAL	3	0	0	3					
Due neguigites Nil	Course Category: Humanities Elective								
Pre-requisite: Nil	Course Type : Theory								

Course Objective(s):

This course introduces the political economy of India. It examines the interplay of politics and economics. Some of the key themes to be explored are globalization, economic reform, poverty, redistribution, federalism, political protest, public goods delivery, gender, and ethnic politics. Although this class focuses specifically on India, many the themes discussed in this course are functions of institutions, rights, Party Systems and challenges.

Course Outcome(s):

CO1	Explain the key concepts of political economy analyse the significant developments in the
COI	political ideologies.
CO1	Describe the salient features of the constitution of India and its functions and interpret,
02	integrate and critically analyse the fundamental rights duties and responsibilities.
CO3	Understand the Political party system their evolution and role in the economy
CO4	Understand the various ideological of Indian Political Thoughts
CO5	Understand and appreciatiate India's undergoing major economic and social transformation

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1						1		3				1			
CO2						1		2	1	1	1				
CO3											1				
CO4	1						1								
CO5							1					1			

Course Topics:

Unit-I: BASICS OF POLITICAL ECONOMY

Political Economy as a Method, perspectives, Politics as Reproduction of Social Relations, State and Social Opportunity, Politics of Rent Seeking -Evolution of State in India: Historical Roots of planning, Redistribution

Unit-II: INDIAN CONSTITUTION

The Pre-amble- Fundamental rights and duties, Directive Principles- Offices of the President, Prime Minister, Cabinet Government, Chief Election Commissioner, and Governor – Parliamentary system and Procedures - The Judiciary system.

Unit-III: PARTY SYSTEM

National and regional political parties, ideological and social bases of parties; patterns of coalition politics; Pressure groups, trends in electoral behaviour; changing socio- economic profile of Legislators

Unit-IV: INDIAN POLITICAL THOUGHT

Political Ideologies: Liberalism, Socialism, Marxism, Fascism, Gandhism and Feminism - Dharamshastra, Arthashastra and Buddhist traditions; Sir Syed Ahmed Khan, Sri Aurobindo, M.K. Gandhi, B.R. Ambedkar, M.N. Roy

Unit-V: CHALLENGES TO INDIAN DEMOCRACY

Uneven Development of Regions in India – Communalism – Regionalism – Violence – Corruption – environmental degradation- illiteracy –population

Text Book(s):

USC19DA12 . DDAFESSIA	L	Т	Р	С					
HSSIOKUIJ : FROFESSIO	3	0	0	3					
Due noguicitas Nil	Course Category: Humanities Elective								
Pre-requisite: Mil	Course Type : Theory								

Course Objective(s):

This subject will provide students with ability to understand and analyse managerial problems in industry so that they can use resources (capitals, materials, staffing, and machines) more effectively.

Course Outcome(s):

CO1	Identify the multiple ethical interests at stake in a real-world situation or practice
CO2	Assess their own ethical values and the social context of problems
CO3	Develop critical thinking skills and professional judgement and understand practical
005	difficulties of bringing about change
CO4	Demonstrate knowledge of ethical values in non-classroom activities, such as service
CU4	learning, internships, and field work
	Manage differing opinions on complex ethical scenarios. It's important for those confronted
CO5	with ethical challenges to be able to hold multiple conflicting points of view, without
	necessarily adhering to any of them

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1						1		3	1	1					
CO2						3	1	3	1	1					
CO3				1			2					1			
CO4						2	2		2	2		1			
CO5								2		1					

Course Topics: Unit-I: ENGINEERING ETHICS

Functions of Being a Manager – Stock holder and stakeholder management – Ethical treatment of employees - ethical treatment of customers- supply chain management and other issues

Unit-II: ENGINEERING AS SOCIAL EXPERIMENTATION

Senses of Ethics – Variety of moral issues – Types of inquiry – Moral dilemmas – Moral Autonomy – Kohlberg's theory – Gilligan's theory – Consensus and Controversy – Professions and Professionalism – Professional ideals and virtues – Theories about right action – Self-interest – Customs and religion – Use of Ethical Theories.

Unit-III: ENGINEER RESPONSIBILITY FOR SAFETY

Corporate social responsibility - Collegiality and loyalty - Respect for Authority - Collective Bargaining - Confidentiality - Conflicts of Interest - Occupational Crime - Professional Rights - Employee Rights - Discrimination.

Unit-IV: RESPONSIBILITY AND RIGHTS

Moral imagination, stake holder theory and systems thinking - One approach to management decision – making Leadership.

Unit-V: GLOBAL ISSUES

Multinational Corporations – Environmental Ethics – Computer Ethics – WeaponsDevelopment – Engineers as Managers – Consulting Engineers – Engineers as ExpertWitnesses and Advisors – Moral Leadership – Sample code of conduct

Text Book(s):

HSC19DA14 - ODED ATION	L	Т	Р	С					
HSSIOKUI4 : OF EKATION	H5516KU14 : UPEKA HUNS KESEAKUH								
Due neguiaites Nil	Course Category: Humanities and Social Science								
Pre-requisite: Nil	Course Type : Theory								

Course Objective(s):

It is essential for professionals in any field to understand the ethical problems and principles in their field. The general principles of professional ethics will be examined, as well as the distinctive problems. This course is presented in three parts: theory; case studies; and research and presentation. Theory includes ethics and philosophy of engineering.

Course Outcome(s):

CO1	Identify and develop operational research models from the verbal description of the real
COI	System
CO2	Build and solve Transportation Models and Assignment Models
CO3	Identify the basic concepts in the linear program theory and game theory
CO4	Illustrate the results and propose recommendations in language understandable to the
04	decision-making processes in Management Engineering
COF	Design new simple models, like: CPM, MSPT to improve decision -making and develop
05	critical thinking and objective analysis of decision problems

Mapping of Course Outcome(s):

		U				S									
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	1	1					1					2		
CO2	2	1	2									1	2		
CO3	2	1	1							1			2		
CO4	2	1	1							1			2		
CO5	2	1	2				1			1	2	1	2		

Course Topics:

Unit-I: LINEAR PROGRAMMING BASICS

Introduction to applications of operations research in functional areas of management - Linear Programming - formulation, solution by graphical and simplex methods (Primal - Penalty, Two Phase), Special cases - Dual simplex method

Unit-II: TRANSPORTATION MODELS AND ASSIGNMENT MODELS

Transportation Models (Minimising and Maximising Cases) – Balanced and unbalanced cases – Initial Basic feasible solution by N-W Corner Rule, Least cost and Vogel's approximation methods - Check for optimality - Solution by MODI / Stepping Stone method - Cases of degeneracy - Transhipment Models - Assignment Models (Minimising and Maximising Cases) – Balanced and Unbalanced Cases - Solution by Hungarian and Branch and Bound Algorithms - Travelling Salesman problem - Crew Assignment Models.

Unit-III: INTEGER LINEAR PROGRAMMING AND GAME THEORY

Solution to pure and mixed integer programming problem by Branch and Bound and cutting plane algorithms - Game Theory - Two Person Zero sum games - Saddle point, Dominance Rule, graphical and LP solutions.

Unit-IV: REPLACEMENT MODELS AND DECISION THEORY

Replacement Models-Individuals Replacement Models (With and without time value of money) – Group Replacement Models - Decision making under risk – Decision trees – Decision making under uncertainty.

Unit-V: PROJECT MANAGEMENT METHOD AND SIMULATION

PERT / CPM – Drawing the network, computation of processing time, floats and critical path. Resource levelling techniques - Application of simulation techniques for decision making

HSS19D015 . TOTAL OUALITY	L	Τ	Р	C					
HSSIORUIS: IUTAL QUALITY	3	0	0	3					
Bue no suisitos Nil	Course Category: Humanities Elective								
Pre-requisite: Mil	Course Type : Theory								

Course Objective(s):

This subject provides students with the knowledge to understand the philosophy and core values of Total Quality Management (TQM). It helps to determine the voice of the customer and the impact of quality on economic performance and long-term business success of an organization; apply and evaluate best practices for the attainment of total quality. Students who complete this course will be able to critically appraise management techniques, choose appropriate statistical techniques for improving processes and write reports to management describing processes and recommending ways to improve them.

Course Outcome(s):

CO1	Understand the role and nature of quality in evolving international economic conditions									
CO2	Apply the Principles of Quality Management for real time problems.									
CO3	Interpret the quality encounter process, including supporting facilities and customer requirements/characteristics									
CO4	Classify quality measurement methods and continuous improvement process									
CO5	Frame Management strategy methods, including identification, development, implementation and feedback processes									

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1								1			2				
CO2						2	1					1			
CO3						1				1	1				
CO4										1					
CO5							1			2		2			

Course Topics:

Unit-I: INTRODUCTION TO QUALITY MANAGEMENT

Definitions – TOM framework, benefits, awareness and obstacles - Quality – vision, mission and policy statements - Customer Focus – customer perception of quality, Translating needs into requirements, customer retention. Dimensions of product and service quality. Cost of quality

Unit-II: PRINCIPLES AND PHILOSOPHIES OF QUALITY MANAGEMENT

Overview of the contributions of Deming, Juran Crosby, Masaaki Imai, Feigenbaum, Ishikawa, Taguchi, Shingeo and Walter Shewhart - Concepts of Quality circle, Japanese 5S principles and 8D methodology.

Unit-III: STATISTICAL PROCESS CONTROL AND PROCESS CAPABILITY

Meaning and significance of statistical process control (SPC) – construction of control charts for variables and attributed - Process capability – meaning, significance and measurement – Six sigma concepts of process capability - Reliability concepts – definitions, reliability in series and parallel, product life characteristics curve - Business process re-engineering (BPR) – principles, applications, reengineering process, benefits and limitations.

Unit-IV: TOOLS AND TECHNIQUES FOR QUALITY MANAGEMENT

Quality functions development (QFD) – Benefits, Voice of customer, information organization, House of quality (HOQ), building a HOQ, QFD process. Failure mode effect analysis (FMEA) – requirements of reliability, failure rate, FMEA stages, design, process and documentation.

Unit-V: TAGUCHI TECHNIQUES

Taguchi techniques – introduction, loss function, parameter and tolerance design, signal to noise ratio - Seven old (statistical) tools - Seven new management tools - Bench marking and POKA YOKE

HSC19D016 . ADVANCED	L	Τ	Р	С					
HSSIGKUIU: ADVANCED	3	0	0	3					
Due neguigites Nil	Course Category: Humanities Elective								
Pre-requisite: Nil	Course Type : Theory								

Course Objective(s):

This course provides the students with the knowledge in problem solving skills in addition with the logical thinking and reasoning. This would enhance the effective communication and it also enhance the verbal ability and data interpretation techniques which is very much needed to survive and enter in to the industries.

Course Outcome(s):

CO1	Explain the basic concepts in effective communication with the enhanced knowledge in
COI	vocabulary
CO2	Identify and solve the problems related to the quantitative ability.
CO3	Apply the basic problems involved in the non-verbal reasoning
CO4	Illustrate the basic knowledge in verbal questions with proper comprehensive studies
CO5	Identify the problems related to data interpretation

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1										2		2			
CO2						2						2			
CO3						2						2			
CO4										2		2			
CO5						1						2			

Course Topics:

Unit-I: EFFECTIVE COMMUNICATION

Comprehending Ability, Business Vocabulary, Speed Reading, Non-Verbal Communication, Cross Cultural Communication, Meeting Management, Technology trend awareness

Unit-II: QUANTITATIVE ABILITY

Time & Work, Time-Speed-Distance, Permutation & Combination Probability, Geometry & Mensuration, Number Properties, Ratio & Proportion, Mixtures & Alligation, Percentages, Profit-Loss-Discount, Averages, Progression, Higher Mathematics

Unit-III: LOGICAL ABILITY

Non-Verbal Reasoning, Deductive & Inductive Reasoning, Binary Logic, Number Series, Clocks, Calendars

Unit-IV: VERBAL ABILITY

Reading Comprehension, Parajumbles, Critical Reasoning, Subject-Verb Agreement, Synonyms & Antonyms, Grammar Reading Comprehension & Logic Miscellaneous Verbal questions

Unit-V: DATA INTERPRETATION

Line Charts, Bar Charts, Pie Charts, Venn diagrams, Caselets, Data tables

Text Book(s):

HONOURS ELECTIVE

MEC19D207.DECICN OF TDANS	L	Т	Р	С	
WIECTORSU/:DESIGN OF TRAINS	3	1	0	4	
Pre-requisite:MEC18R271- Strength of	Course Category: Honors				
Materials	Course Type : Theory				

Course Objective(s):

To understand the principles involved in evaluating the shape and dimensions of a component to satisfy functional and strength requirements.

Course Outcome(s):

CO1	Analyze, understand and design flexible transmission elements such as belt, chain and wire
COI	ropes.
CO2	Interpret and design spur gear drive for different application and analyze the same for
02	various applications.
CO3	Apply design procedure for making helical, bevel and worm gear drives for various
005	applications.
CO4	Develop a new set of gear box for different applications.
CO5	Demonstrate and select suitable materials for clutches and brakes.

Mapping of Course Outcome(s):

		_													
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	2	3	2	2					2			3		1
CO2	3	1	3	2	3					2			3		1

CO4	3	1	3	2	3					2			3		1
CO5	3	1	3	2	3					2			3		1

Course Topics:

Unit-I:DESIGN OF FLEXIBLE ELEMENTS

V belts and pulleys - flat belts and pulleys - wire ropes and pulleys - link chains and pulleys - transmission chains and sprockets - silent chains - ribbed V belts.

Unit-II:DESIGN OF SPUR GEAR

Gear terminology – module – force analysis- tooth stresses – fatigue strength – Lewis and Buckingham design – limitations – dynamic effects

Unit-III:DESIGN OF BEVEL, WORM AND HELICAL GEARS

Parallel helical gears - kinematics - force analysis in crossed helical gears - worm gearing - force analysis in straight bevel gears - kinematics bevel gear - force analysis in gear blank - Cross Helical gears.

Unit-IV:DESIGN OF GEAR BOX

Gear box-geometric progression, standard step ratio, Ray diagram, kinematics layout -design of sliding mesh gear box - constant mesh gear box. Couplings, Torque Converters for automotive applications.

Unit-V:DESIGN OF CLUTCHES AND BRAKES

Clutches –internal expanding rim clutches- external contracting rim clutches - frictional contact axial clutches, cone clutches – brake- energy considerations - temperature rise - friction materials.

MEC19D210 - CNC MA	L	Τ	Р	С					
MECIORSIU: CINC MA	3	1	0	4					
Pre-requisite: MEC18R302 –	Course Category: Honors								
Manufacturing Processes	Manufacturing Processes Course Type : Theory								

Course Objective(s):

This course introduces you to modern manufacturing with two areas of emphasis: computer aided manufacturing, and computer aided process planning.

Course Outcome(s):

CO1	Apply the concepts of manufacturing science in the field of advanced manufacturing systems
CO2	Analyze the complex engineering linkage, machine and structure of the CNC
CO3	Compare the different types of drive systems used in CNC for mechanical engineering field
CO4	Identify the effect of different types of co-ordinate system used in CNC machining
CO5	Demonstrate the different types of cutting tools and materials

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2				2	2	2	2	2	2	2	3	2	2	2
CO2		3			2	2	1	1			1	2		3	
CO3			3		2	1	1	1			1	1	1	2	
CO4	2	3	2	2	2	1	2	1			1	1			3
CO5		3	1			1	1	1			1	1			2

Course Topics:

Unit-I: INTRODUCTION

Development of CNC technology - principles, features, advantages, economic benefits, applications - CNC, DNC concept - classification of CNC machine- types of control, CNC controllers, characteristics, interpolators-current trends in programming, Human Machine Interface software

Unit-II: CNC MACHINES

CNC machine building, structural details, configuration and design, guide ways - friction and antifriction and other types of guide ways - elements used to convert the rotary motion to a linear motion- screw and nut - recirculating ball screw, planetary roller screw, re- circulating roller screw - rack and pinion - torque transmission elements- gears, timing belts, flexible - couplings and bearings. ATC and Tool Magazines, and Machine Control Units - maintenance of CNC machines.

Unit-III: DRIVES

Spindle drives- DC shunt motor, 3 phase AC induction motor - feed drives - stepper motor servo principle, DC and AC servo motors- open loop and closed loop control - axis measuring system - synchro, synchro revolver, gratings, moiré fringe gratings, encoders, inductosyn laser interferometer.

Unit-IV: PART PROGRAMMING

Coordinate system - structure of a part program, G and M codes - manual part programming for Fanuc, Sinumeric control system – CAPP - APT part programming using CAD/CAM, parametric programming. Introduction to Computer assisted part programming -Step turning and thread cutting operations.

Unit-V: CUTTING TOOL MATERIALS

Cutting tool materials - carbide inserts classification - qualified, semi qualified and preset tooling, tooling system for machining centre and turning centre work holding devices –ISO tool holders and inserts.

MEC18D217.TDIDO	L	Τ	Р	С
MEC10K51/:1KIDU	3	1	0	4
Pre-requisite:MEC18R211 –				
Engineering Mechanics				

Course Objective(s):

The aim of undergoing this course is to provide broad based understanding of the interdisciplinary subject 'tribology' and its technological significance

Course Outcome(s):

CO1	Explain the surface friction and types of wear at different conditions
CO2	Outline the theories of lubrication, lubrication regimes, theories of hydrodynamic, elasto
	hydrodynamic etc.
CO3	Identify suitable wear testing equipment and standard procedure for different applications.
CO4	Apply suitable frictional components to reduce frictional wear.
CO5	Evaluate the various tribological instruments with international standards.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	2	2							1			2	1	
CO2	3	2	1	1						1			2	1	
CO3	3	3	2	2	2					1	1	1	2	1	
CO4	3	3	3	2	2					1	1	1	2	1	2
CO5	3	3	2	2	2					1	1	1	2	1	2

Course Topics:

Unit-I:SURFACE FRICTION AND WEAR

Topography of the surfaces - surface features - surface interaction - theory of friction - sliding and rolling friction, friction properties of metallic and non-metallic materials, friction in extreme conditions - wear-types of wear - mechanism of wear - wear resistance materials - surface treatment - surface modifications - surface coatings.

Unit-II:LUBRICATION THEORY

Lubricants-physical properties, lubricants standards, lubrication regimes - hydrodynamic lubrication - Reynolds equation - thermal, inertia and turbulent effects - elasto hydrodynamic, plasto hydrodynamic and magneto hydrodynamic lubrication - hydro static lubrication - gas lubrication.

Unit-III:WEAR TESTING METHOD

An abrasive wear tester-A rolling sliding wear tester- A pin-on-disc wear tester-Three body wear test.

Unit-IV:APPLICATION OF TRIBOLOGY

Introduction-Rolling Contact Bearings- Gears- Journal Bearings - Off shore bearing, wind turbine sliding bearing.

Unit-V:TRIBO MEASUREMENT IN INSTRUMENTATION

Surface Topography measurements – Electron microscope and friction and wear measurements – Laser method – instrumentation - International standards – bearings performance measurements – bearing vibration measurement

MEC18R318:REFRIGERAT	L	Τ	Р	С
CONDITIONIN	3	1	0	4
Pre-requisite:MEC18R274 - Thermal				
Engineering				

Course Objective(s):

Enable the students to understand the principles and concepts of refrigeration and air conditioning

Course Outcome(s):

CO1	Interpret the basic concepts of various refrigeration systems
CO2	Predict the types of refrigerants suitable for the applications considering the environmental
	issues.
CO3	Employ the acquired knowledge to provide solution for the psychrometric properties.
CO4	Identify the cooling load for a given space and suggest the cooling requirements.
CO5	Impart knowledge about the air conditioning equipment and its usage.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	1		1								2	2	2	
CO2	3	1		1			1	3				2	2	1	
CO3	3	2										2	2		
CO4	3	2	2	1				1				2	2	1	
CO5	3											1	2		

Course Topics:

Unit-I:INTRODUCTION

Review of thermodynamic principles of refrigeration, concept of aircraft refrigeration system, Advanced vapour compression refrigeration cycle and system, use of P-H charts, multistage and multiple Evaporator systems, cascade system, COP comparison, Advanced vapour absorption refrigeration system & components, ammonia water and lithium bromide water systems, steam jet refrigeration system.

Unit-II:REFRIGERANTS AND APPLICATIONS

Refrigerants - properties - selection of refrigerants, alternate refrigerants, refrigeration plant Controls testing and charging of refrigeration units- applications to refrigeration systems. Ozone depletion and global warming issues

Unit-III:PSYCHROMETRY AND COOLING LOAD CALCULATION (PSYCHROMETRIC AND COMFORT AIR CONDITIONING PROCESS)

Psychrometric processes-use of psychrometric charts, grand and room sensible heat factors, By pass factor, requirements of comfort air conditioning, comfort charts, factors governing optimum effective temperature, recommended design conditions and ventilation standards.

Unit-IV:LOAD

Types of load-design of space cooling load, heat transmission through building, solar radiation, Infiltration, internal heat sources (sensible and latent) ,outside air and fresh air load, estimation of total load-domestic, commercial and industrial systems-central air conditioning systems.

Unit-V:AIR CONDITIONING EQUIPMENTS

Air conditioning equipment – air cleaning and air filters, humidifiers, dehumidifiers, air washers, Condenser, expansion devices, evaporator, cooling tower and spray ponds, elementary treatment of duct design, air
distribution system-Thermal insulation of air conditioning systems-applications-car, industry, stores and public buildings

Text Book(s):

MEC19D222 · MODEDN MANUEAC	L	Τ	Р	С	
MECION522: MODERIN MANUFAC	3	1	0	4	
Pre-requisite: MEC18R302 -	Course Category: Honors				
Manufacturing Processes	Course Type : Theory				

Course Objective(s):

The aim of undergoing this course is to develop the basic Ideas with the Metallurgical Composition, Machining and Robotics.

Course Outcome(s):

CO1	Recognize the need and importance of Non-traditional process and its selection based on
COI	the parameters, shapes
CO2	Distinguish the principle, process parameters of abrasive water jet machining and
02	ultrasonic machining process.
CO3	Describe the process involved in the electrical discharge machining
CO4	Analyze chemical and electro chemical machining process for making complex profile in
CU4	hard metals.
CO5	Outline the appropriate high energy machining process for the various materials

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	1	1									1	3	2	
CO2	2	2	2		2		1			2		2	3	2	1
CO3	2	2	2		2		1			2		2	3	2	1
CO4	3	2	2		2					2		2	3	2	1
CO5	1	2		1	2		1					2	3	2	1

Course Topics: Unit-I: INTRODUCTION

Need of Non-Traditional Machining Processes – Classification Based on Energy, Mechanism, source of energy, transfer media and process – Process selection Based on Physical Parameters, shapes to be machined, process capability and economics – Overview of all processes.

Unit-II: MECHANICAL PROCESS

Ultrasonic Machining: Principle- Transducer types – Concentrators – Abrasive Slurry – Process Parameters – Tool Feed Mechanism – Advantages and Limitations – Applications. Abrasive Jet Machining: Process-Principle – Process Variables – Material Removal Rate – Advantages and Limitations – Applications. Water Jet Machining: Principle – Process Variables – Advantages and Limitations – Practical Applications – Abrasive water jet machining process.

Unit-III: ELECTRICAL DISCHARGE MACHINING

Electrical Discharge Machining: Mechanism of metal removal – Dielectric Fluid – Flushing methods – Electrode Materials – Spark Erosion Generators – Electrode Feed System – Material Removal Rate – Process Parameters – Tool Electrode Design – Tool wear Characteristics of Spark Eroded Surfaces- Advantages and Limitations – Practical Applications. Electrical Discharge Wire Cut and Grinding: Principle – Wire Feed System – Advantages and Limitations – Practical applications

Unit-IV: CHEMICAL AND ELECTRO CHEMICAL MACHINING

Chemical Machining: fundamentals, Principle –classification and selection of Etchant -chemical milling, Engraving, Blanking – Advantages and limitations – Applications. Electro Chemical Machining: Electrochemistry of the process-Electrolytes – Electrolyte and their Properties – Material Removal Rate – Tool Material – Tool Feed System – Design For Electrolyte Flow – Process Variables – Advantages and Limitations – Applications – Electro Chemical Grinding: Honing, cutting off, Deburring and turning.

Unit-V: HIGH ENERGY MACHINING PROCESS

Electron Beam Machining: Principle –Generation and control of electron beam-Advantages and Limitations – Applications. Laser Beam Machining: Principle –Solid and Gas Laser Application – Thermal Features of LBM – Advantages and Limitations – Applications. Ion Beam Machining: Equipment – process characteristics – Advantages and Limitations – Applications. Plasma Arc Machining: Principle –Gas mixture – Types of Torches – Process Parameters – Advantages and Limitations – Applications. Ion Beam Machining – Principle – MRR – advantages, limitation, applications.

MEC18R331:VIBRATION ANA	L	Τ	Р	С				
MONITORIN	3	1	0	4				
Bro pognicito. Nil	Course Category: Honors							
rre-requisite: Mi								

Course Objective(s):

The aim of undergoing this course is to develop knowledge on advanced technologies in vibration analysis and noise monitoring.

Course Outcome(s):

CO1	Demonstrate vibration and summarize the types of mechanical vibrations.
CO2	Explain noise monitoring and apply techniques on noise controlling.
CO3	Classify the various sources of automotive noises.
CO4	Identify various control techniques of vibrations.
CO5	Construct various techniques for noise control.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	2											2		
CO2	2	3	3	2		2							2		
CO3	1	3		1									2		
CO4	1	3	3	2									2		
CO5	1	3	3	2									2	2	

Course Topics:

Unit-I:FUNDAMENTALS OF VIBRATION

Introduction - classification of vibration - free and forced vibration, undamped and damped vibration, linear and non linear vibration - response of damped and undamped systems under harmonic force analysis of single degree and two degree of freedom systems, torsional vibration, determination of natural frequencies.

Unit-II:BASICS OF NOISE

Introduction - amplitude, frequency, wavelength and sound pressure level, addition, subtraction and averaging decibel levels, noise dose level, legislation -measurement and analysis of noise - measurement environment - equipment, frequency analysis, tracking analysis, sound quality analysis source ranking, noise control effectiveness.

Unit-III: AUTOMOTIVE NOISE SOURCES

Noise Characteristics of engines - engine overall noise levels, assessment of combustion noise, assessment of mechanical noise, engine radiated noise, intake and exhaust noise, engine accessory contributed noise, transmission noise, aerodynamic noise, tyre noise, brake noise

Unit-IV:CONTROL TECHNIQUES

Vibration isolation - tuned absorbers, untuned viscous dampers, damping treatments- application of dynamic forces generated by IC engines - engine isolation - crank shaft damping - modal analysis of the mass elastic model shock absorbers

Unit-V:SOURCE OF NOISE AND CONTROL

Methods for control of engine noise - combustion noise, mechanical noise, predictive analysis, palliative treatments and enclosures - automotive noise control principles -sound in enclosures, sound energy absorption, sound transmission through barriers. Case studies in automobile applications

MEC18R333:DESIGN OF HE	L	Τ	Р	С	
EQUIPMENT	S	3	1	0	4
Pre-requisite: MEC18R274 – Thermal	Course Category:Honors				
Engineering	Course Type : Theory				

Course Objective(s):

Study about the fundamentals of heat exchanger mechanisms and design of heat exchangers as per the industrial needs

Course Outcome(s):

CO1	Illustrate different types of heat exchangers and identify the varied methods of heat exchanger analysis
CO2	Identify the resource parameters which affects the performance of heat exchangers
CO3	Manipulate the basic ideas in baffles with its effects and some varied heat exchangers
CO4	Employ the acquired knowledge in designing the condenser and evaporator
CO5	Interpret the concepts in selection of accessories for heat exchangers

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	2										2	2	1	
CO2	3	2	2	2				2					2	2	
CO3	3	2	2	1									2	2	
CO4	3	2	3	2	2							2	2	2	2
CO5	3											2	2		

Course Topics:

Unit-I:HEAT EXCHANGERS

Types, shell and tube heat exchangers, regenerators and recuperators, industrial applications, temperature distribution and its implications, LMTD, effectiveness

Unit-II:FRICTION FACTOR

Heat exchanger components design (tube- sheet, bonnet and channel, etc.) with ASME and TEMA codes, Effect of turbulence, friction factor, pressure loss, channel divergence, thermal stress in tubes, and types of failures

Unit-III:HEAT TRANSFER AND PRESSURE LOSS

Heat transfer and pressure loss, flow configuration, effect of baffles, effect of deviations from ideality, design of typical liquid, gas-liquid heat exchangers, plate heat exchangers

Unit-IV:CONDENSERS

Design of surface and evaporative condensers, design of shell and tube, plate type evaporators

Unit-V:ACCESSORIES

Material selection, packing's, spray design, selection of pumps, fans and pipes, testing and maintenance, experimental methods

MEC18R338 : GEAR MANUE	L	Τ	Р	С	
INSPECTION	Į	3	1	0	4
Pre-requisite: MEC18R302-	Course Category: Honors				
Manufacturing Processes	Course Type : Theory				

Course Objective(s):

This course provides the candidates with a broad understanding of the methods used to manufacture and inspect gears and how the resultant information can be applied and interpreted in the design process.

Course Outcome(s):

CO1	Review a range of terminologies and principles of Gear Geometry.
CO2	Make use of different gear manufacturing techniques pertaining to the application.
CO3	Identify appropriate gear inspection techniques in relevance with the application.
CO4	Examine the various stages of materials processing, designing and analyzing of gears.
CO5	Build bevel and worm gears according to the design standards for a relevant claim.

Mapping of Course Outcome(s):

						1.1									
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	1	2			1							2	3	
CO2	1	3	1			1	2	1				1	2	3	
CO3	3	2	2	3		3	2	3	1				3	2	
CO4	3	3	3	2	3	2		3	1		1	1	3	3	3
CO5	3	2	3	2		2		3				1	3	2	

Course Topics:

Unit-I: GEAR GEOMETRY

Principles of gear tooth action, geometry of spur and helical gears. Gear terminologies

Unit-II: GEAR MANUFACTURING

Gear manufacturing – types – forming gear teeth by milling – gear generation by planning, shaping and hopping process – applications.

Unit-III: GEAR INSPECTION

Parkinson gear testing, Gleason gear testing, sources of errors in manufacturing gears, gear measurements, measurement of individual element, rolling test, composite method of gear checking.

Unit-IV: DESIGN AND ANALYSIS

Design considerations, materials treatments and methodology - gear tooth failure mode analysis, stresses and load calculation.

Unit-V: BEVEL AND WORM GEARS

Principles of geometry and design of bevel and worm gearing.

MEC18R342:COMPUTATIONAL FI	L	Τ	Р	С	
HEAT TRANSF	3	1	0	4	
Pre-requisite:MEC18R274 - Thermal	Course Category: Honors				
Engineering					

Course Objective(s):

The course introduces the various methods to solve the complex problems in fluid flow and heat transfer

Course Outcome(s):

CO1	Apply the theory of Computational Fluid Dynamics for different types of fluid flow.
CO2	Apply finite difference methods in real time applications
CO3	Create algorithm for fluid flow problems using finite volume approach.
CO4	Solve one and two dimensional flow problems using finite element method.
CO5	Analyze the flow situations using CFD results

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	2	2	3	2							2	1	2	
CO2	3	2	2	2	2							2	1	2	
CO3	3	2	2	2	2							2	1	2	
CO4	3	2		2								2	2	2	
CO5	1	2	3									2	2	2	

Course Topics: Unit-I:INTRODUCTION

Physical phenomena governing differential equation, - conservation of mass, momentum and energy equationspecial form of Navier-Stokes equations –boundary layer theory- Buoyancy driven flow-compressible flow turbulent flow –classification of governing equations - initial and boundary conditions- grid independence test.

Unit-II:FINITE DIFFERENCE METHOD

Basics of finite difference method – finite difference approximations for derivatives – explicit and implicit method – consistency, stability, numerical errors – upwind differencing-application of FDM to heat transfer conduction and convection– SOLA method - mixed boundary condition - Gauss- Siedel and SOR Methods – ADI method to solve ψ - ω form of NS equation-ADI method.

Unit-III:FINITE VOLUME METHOD

Control volume approach - steady and unsteady one dimensional conduction - two dimensional problems – FVM applied to advection diffusion equation - predictor – corrector step- pressure correction technique-SIMPLE algorithm – upwind scheme - power law scheme-source term linearization-implementation of boundary condition.

Unit-IV:FINITE ELEMENT METHOD

Finite element method an introduction – Basic concepts – Galerkin's method - steady state diffusion – transient diffusion - one dimensional and two dimensional regions – FEM to 1D problem – 2D problems – finite element formulations— validation of CFD results - benchmark problems –cavity flow - inflow outflow problems –open domain problems-enclosure problems

Unit-V:GRID GENERATION AND POST PROCESSING

Physical domain – computational domain – algebraic method – differential equation methods – adaptive grids – body fitted co-ordinates system – stream line contours – vector plots - Turbulent flow an introduction – modeling of turbulent flow - Turbulent flow k- ϵ model.

MEC18R405:ENERGY CONSI	L	Τ	Р	С				
MANAGEMEN	MANAGEMENT							
Pre-requisite:MEC18R274 – Thermal	Course Category:Honors							
Engineering	Course Type : Theory							

Course Objective(s):

To understand the energy data from industries and carry out energy audit for energy savings

Course Outcome(s):

CO1	Recognize the demand of Energy and Power
CO2	Improve the energy conservation by adopting Energy audit & Energy Economics
CO3	Impart the basic principles of Energy Efficiency in Industries.
CO4	Apply the Energy conservation methods in thermal power plant
CO5	Conserve the energy in electro mechanical equipments

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3						3				2	2	3		
CO2	3	3		3			3				2		3		
CO3	3	3		2			3				2		3		
CO4	3	3		2			3				2	3	3		
CO5	3	3		2			3				2	2	3		

Course Topics: Unit-I:INTRODUCTION

Introduction to energy & power scenario of world, National Energy consumption data, environmental aspects associated with energy utilization

Unit-II:ENERGY AUDIT AND ENERGY ECONOMICS

Energy Auditing- need, types, methodology and barriers, role of energy managers, instruments of energy auditing. Energy Economics- discount period, payback period, internal rate of return, net present value; Life Cycle costing- ESCO concept

Unit-III:ENERGY EFFICIENCY

Components of EB billing, HT and LT supply, transformers, cable sizing; Concept of capacitors, power factor improvement, harmonics; Electric motors- motor efficiency computation, energy efficient motors; Illumination-Lux, Lumens, types of lighting, efficacy, LED lighting and scope of energy conservation in lighting

Unit-IV:ENERGY CONSERVATION IN THERMAL POWER PLANT

Thermal systems, Boilers, Furnaces and Thermic Fluid heaters- efficiency computation and energy conservation measures; Steam distribution and usage, steam traps, condensate recovery, flash stream utilization; Insulation & Refractories.

Unit-V:ENERGY CONSERVATION IN ELECTRO MECHANICAL EQUIPMENTS

Energy conservation in major utilities; pumps, fans, blowers, compressed air systems, Refrigeration& Air Conditioning systems, Cooling Towers, DG sets. Energy Economics- discount period, payback period, internal rate of return, net present value; Life Cycle costing- ESCO concept

MEC18R412 : MICRO ELECTE	L	Τ	Р	С	
SYSTEMS	3	1	0	4	
Pre-requisite: EEE17R172- Basic	Course Category: Honors				
Electrical Engineering					

Course Objective(s):

The objective of this course is to make students to gain the knowledge in MEMS (Micro electro Mech

Course Outcome(s):

CO1	Understand the basic concept of MEMS and their technology.
CO2	Understand (Ilustrate) the material properties and identify the fabrication process.
CO3	Apply the knowledge to design the Micro and Nano devices for various applications.
CO4	Apply the knowledge to design the components by analyzing various techniques.
CO5	Understand (Interpret) the concept of transducer design and their fabrication techniques

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2		3									1	2		
CO2	2	1						1					2	1	
CO3	2		2	1									2		
CO4	2		2	1									2		
CO5	2							1					2		

Course Topics:

Unit-I: FUNDAMENTALS OF MEMS

Introduction, history, development and need of micro-electro - mechanical systems, Components of MEMSoverview of MEMS technology.

Unit-II: MATERIALS AND FABRICATION PROCESSES

Different electro-physical processes used for machining - dealing with MEMS materials - relevant non - conventional processes - IC fabrication processes used for MEMS - MEMS sensors and actuators.

Unit-III: NANO ELECTRO MECHANICAL SYSTEM

Introduction to Design of NEMS biological and bio systems analogies - Devising and Synthesis of MEMS AND NEMS - MEMS Motion Micro devices Classifier – Synthesis Nano electromechanical Systems Modeling of Micro- and Nano-scale Electromechanical Systems – Devices, Structures and its Applications

Unit-IV: DESIGN CONSIDERATION

Design consideration – process design-mechanical design –design of silicon die-design of micro fluidic network systems-capillary electrophoresis network system

Unit-V: MEMS AND NEMS

Design and Fabrication Analysis of Translational Micro-transducers - Single-Phase Reluctance, Micro-motors -Modeling, Analysis, and Control - Three-Phase Synchronous Reluctance Micro-motors Micro-fabrication Magnetization, Dynamics of Thin Films Microstructures – Micro-transducers With Permanent Magnets.

MEC19D426.DESIGN AND ANALVS	L	Τ	Р	С	
MEC10R420:DESIGN AND ANAL IS	3	1	0	4	
Bro pognicito. Nil	Course Category: Honors				
rre-requisite:mi	Course Type : Theory				

Course Objective(s):

- Obtain the knowledge about various types of experiments that are frequently employed in industries for experimental studies.
- Plan, design and conduct experiments efficiently and effectively.
- Being prepared to analyze and interpret the experimental data obtained through designed experiments.
- Being able to compare classical designs, orthogonal arrays and response surface methods.

Course Outcome(s):

CO1	Analyze the various types of designs of experiments.
CO2	Apply and selection of the proper design of experiments that suits the application.
CO3	Classify control factors, their levels, noise factors and objective functions.
CO4	Evaluate and learn adjustments and modifications in standard design of experiments.
CO5	Apply the regression model for the problem considered.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	1											2		
CO2		2		1					1				2		
CO3	2	3	1											2	
CO4	2	1	1								2			1	
CO5	1	2			3										2

Course Topics:

Unit-I:INTRODUCTION TO RESEARCH METHODOLOGY

Introduction to research methodology, The economics of reducing variation, quality characteristics and objective functions, Taguchi quality loss function, DOE process – steps and description, Typical test strategies, Better test strategies- full factorial experiments, fractional factorial experiments, standard orthogonal arrays and linear graphs

Unit-II:ANOVA

Construction of orthogonal arrays and modification of linear graphs. Introduction to analysis of variance (ANOVA) – analogy with Fourier analysis, No way ANOVA, one way ANOVA, two way ANOVA, three way ANOVA, signal to noise (S/N) ratio, sum of squares, degrees of freedom, F-test, p-value, pooling, percent contribution, interpretation, examples on ANOVA.

Unit-III:DESIGN OF EXPERIEMENTS

Control factors and their levels and noise factors. Two level experiments (2K design), blocking and confounding, three level experiments (3K design), mixed level experiments, multiple level experiments, polynomial effects, confirmation experiments, additive models, Latin squares and related designs, case studies.

Unit-IV: ANALYSIS OF EXPERIEMENTS

Response surface methodology (RSM) – First order model, second order model, stationary point, central composite design (CCD), Box-Behnken design, Face centered cubic design (FCCD), surface plots.

Unit-V:MODELLING

Fitting regression models, model building, adequacy checking of models and case studies.

MEC19D420 . DDODUCT DESIGN	L	Τ	Р	С	
WIECIOR429 : FRODUCT DESIGN	3	1	0	4	
Bue neguiaite. Nil	Course Category: Honors				
rre-requisite: 1011	Course Type : Theory				

Course Objective(s):

The aim of undergoing this course is to develop basic understanding the topics in Mechanical Engineering

Course Outcome(s):

CO1	Analyze the need and importance of product design and development processes in
	manufacturing industries.
CO2	Apply the methodologies for concept generation, selection and testing of product design.
CO3	Design product architecture and its role in product development.
CO4	Develop the process design using CAD, CAM and CAE tools.
CO5	Interpret the benefit analysis through various cost models.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	1										1	2		
CO2	2	1	2		1			1				2	2	3	
CO3	2	1	2		2			1				1	3	1	
CO4	2	1	2		3			1				2	3	2	3
CO5	2	1	2					1				1	2		

Course Topics: Unit-I: INTRODUCTION

Need for IPPD – Strategic importance of Product development – integration of customer, designer, material supplier and process planner, Competitor and customer – behaviour analysis. Understanding customer – promoting customer understanding – involving customer in development and managing requirement – Organization process management and improvement

Unit-II: CONCEPT GENERATION, SELECTION AND TESTING

Plan and establish product specifications. Task – Structural approaches – clarification – search – externally and internally – Explore systematically – reflect on the solutions and processes – concept selection – methodology – benefits. Implementation – Product change – variety – component standardization – product performance – manufacturability – Concept Testing Methodologies.

Unit-III: PRODUCT ARCHITECTURE

Product development management – establishing the architecture – creation – clustering – geometric layout development – fundamental and incidental interactions – related system level design issues – secondary systems – architecture of the chunks – creating detailed interface specifications – portfolio architecture

Unit-IV: INDUSTRIAL DESIGN

Integrated process design – Managing costs – Robust design – Integrating CAE, CAD, CAM tools – Simulating product performance and manufacturing processes electronically – Need for industrial design – impact – design process – investigation of customer needs – conceptualization – refinement – management of the industrial design process – technology driven product s – user – driven products – assessing the quality of industrial design.

Unit-V: DESIGN FOR MANUFACTURING AND PRODUCT DEVELOPMENT

Definition - Estimation of Manufacturing cost – reducing the component costs and assembly costs – Minimize system complexity – Prototype basics - Principles of prototyping – Planning for prototypes – Economic Analysis – Understanding and representing tasks – baselines project planning – accelerating the project – project execution.

MEC18R435 : DESIGN FOI	L	Τ	Р	С
MANUFACTURING S	3	1	0	4
Pre-requisite: MEC18R302 -				
Manufacturing Processes				

Course Objective(s):

To provide detailed information about the group technology concept.

To provide depth knowledge on planning, design, implementation and control techniques of cellular manufacturing systems.

Course Outcome(s):

CO1	Describes the process and characteristics of group technology.
CO2	Design of various approaches for cellular manufacturing system.
CO3	Demonstrate the implementation process of cellular manufacturing system.
CO4	Analyze the performance of group technology and cellular manufacturing process
COF	CO5: Apply and analyze the concepts acquired to determine the economy of cellular
05	manufacturing process

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	3	2										2	1	
CO2	1	3	2	1	1								3		
CO3	1	1	3		1	2							1		
CO4	1	1	2	1	2									2	
CO5	1	2	2		3		2						1	3	

Course Topics: Unit-I: INTRODUCTION

Introduction to Group Technology (GT), Limitation of traditional manufacturing systems, characteristics and design of groups, benefits of GT and issues in GT.

Unit-II: CMS PLANNING AND DESIGN

Problem in GT/CMS – Design of CMS – Models, Traditional approaches and non-traditional approaches – Genetic Algorithms, Simulated Annealing, Neutral networks.

Unit-III: IMPLEMENTATION OF GT/CMS

Inter and Intra cell layout, cost and non – cost based models, establishing a team approach, Managerial structure and groups, batch sequencing and sizing, life cycle issues in GT/CMS.

Unit-IV: PERFORMANCE MEASUREMENT AND CONTROL

Measuring CMS performance – Parametric analysis – PBC in GT/CMS, cell loading, GT and MRP framework.

Unit-V: ECONOMICAL OF GT/CMS

Conventional Vs group use of computer models in GT/CMs, Human aspects of GT/CMS - cases.

MEC19D427 DESIGN FOD	L	Т	Р	С	
MECIOR457 : DESIGN FOR	3	1	0	4	
Dre requisiter Nil	Course Category: Honors				
Fre-requisite: 1011	Course Type : Theory				

Course Objective(s):

The aim of this course is to inculcate the knowledge on time management and shop floor control.

Course Outcome(s):

CO1	Explain the production Improvement studies with work study Concepts.
CO2	Demonstrate the Methodology to solve the human factor analysis In Industries.
CO3	Illustrate the procedure to develop systematic approach for process control.
CO4	Analyze the rate of timing in production and to control on time management.
CO5	Compare the effort of human and machine on production processes.

Mapping of Course Outcome(s):

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	1	2	2								1			1	1
CO2	1	1	3					1			1			1	
CO3	1		2								1		1	1	
CO4	1		2								1			1	
CO5	1		2		2						1		2	1	

Course Topics:

Unit-I: PRODUCTIVITY

Definition, reason for low productivity, methods to improve productivity, work-study and productivity

Unit-II: HUMAN FACTOR IN WORK- STUDY

Relationship of work-study man with management, supervisor & workers, qualities of a work-study man.

Unit-III: METHOD-STUDY

Definition, Objectives, step-by-step procedure, questioning techniques, chart and diagrams for recording data. Like outline process charts, flow process charts, multiple activity charts, two handed process chart, string diagram, travel chart, cycle graph, Chrono-cycle graph, therbligs, micro motion study and film analysis, Simo chart, principles of motion economy. Development and installation of new method.

Unit-IV: WORK-MEASUREMENT

Definition, various techniques of work-measurement work-sampling, stopwatch time study & its procedure, Job selection, Equipment and forms used for study, methods of rating, allowances and their types, standard time, numerical problems, predetermined – time standards and standard data techniques. Incentive –Meaning, objectives of an incentive plan, various types of incentive plans.

Unit-V: ERGONOMICS

Introduction, history of development, man-machine system and its components. Introduction to structure of the body- features of the human body, stress and strain, and metabolism, measure of physiological functions-workload and energy consumption, biomechanics, types of movements of body members, strength and endurance, speed of movements. NIOSH lifting equation, Lifting Index, Maximum acceptable Weights and Forces, Distal upper extremities risk factors, Strain Index, RULA,REBA. Applied anthropometry – types, use, principles in application, design of work surfaces and seat design. Visual displays for static information, visual

displays of dynamic information, auditory, tactual and olfactory displays and controls. Assessments of occupational exposure to noise, heat stress and dust. Effect of vibration/noise, temperature, illumination and dust on human and performance.
